PREFACE=====

A disadvantage to countries whose language is not widely spoken, such as the Netherlands, is that their products of scholarship and science will not easily become known abroad. Research results tend to be published in the language of the investigator. Foreign journals, apparently, are not readily accessible in practice.

Thus, during the past ten years much research has been conducted in the Netherlands in the field of primary health care, which has hardly been noted abroad.

This is a pity, though. For in the Netherlands much research, and to our view of high quality at that, is undertaken in the field of primary health care. A national institute (grant-aided by the Ministry of Welfare, Public Health and Culture), the Netherlands Institute of General Practitioners (NHI) as well as eight University Institutes of General Practitioners are engaged in consistent research programmes concerning general medicine and primary care.

But elsewhere, too, in numerous other university-based or non-university institutes, in the individual general practice and health centre, a great deal of study in this respect is carried out.

The Netherlands College of General Practitioners (NHG) has a special committee for the purpose: the Scientific Research Committee.

For ten years now, the Netherlands Institute of General Practitioners has kept a registration system of all current research projects in this field. On the occasion of the tenth anniversary the Netherlands Institute of General Practitioners and the Netherlands College of General Practitioners decided to produce jointly a decennial publication in English for the explicit purpose of informing a more international readership of Dutch research in the area of primary

health care.

The book consists of a general section which presents a survey of the present state of affairs. In this, a number of factual findings is reviewed, including

- who are the performers of research
- how long do the projects take
- what are the usual mediums of communication

Here, too, the developments that occurred in the past decade are already considered. In addition the research projects (452 in number) are classed under a number of headings; in doing so the strongly developed and underdeveloped subjects are discussed.

The second (and by far the greater) part describes in brief each of the studies that are included in the introductory survey, adhering to the classification adopted in the survey. Thus the studies that are referred to in relation to the various categories are easily looked up.

For every investigation an abstract of its problem definition or object is given. The investigator's name as well as the name of the research institute are also included in each case. This we did with the specific intention that an interested reader may contact on his/her own initiative the investigator in question, in order to be further informed of the details and results of the study in a more personal contact.

We included a few data on the duration and any publications in order to give a general impression of the topical interest and relevance of the project. If under the heading of publications it is stated that none are available, this implies that nevertheless all of the research data are open to the public, i.e., on principle to any applications that may be made for them.

At the end of the book further references can be found
- an index and a list of the names and addresses of
research institutes - which turn this into a complete
reference work.

We hope that a need will be filled by this book.

Introduction-----

The Netherlands Institute of General Practitioners has been keeping a Registration System of current research in and into primary health care since 1972. Annual reports are published in which the latest data are included. The tenth anniversary of the system is the occasion to give for once a complete review of all research conducted during the past ten years in the field of primary health care in the Netherlands. It also presents a suitable moment to strike a balance.

At the time when the Registration System was established, the objective was: to make available to everyone the most extensive information possible on actually started research in the field of primary care in its earliest possible stages. The reason for doing so was that in the Netherlands at the time - the university institutes of general medicine had hardly started - much research was undertaken by individual general practitioners who often were quite unaware that other physicians were involved in exactly the same material at the very same time. Little benefit was derived of knowledge that had been acquired in other investigations. Much experience (in particular that of negative results!) was lost. Moreover it was suspected that there existed both enormous overlaps and large blanks. But these became never really manifest because a comprehensive view of the situation was lacking. But when during ten years research data in a certain area are systematically collected, there will come a moment when such an overview does arise. This overview will then acquire some intrinsic significance besides the information value it has for fellow-investigators. On the basis of this intrinsic significance, the Registration System was recently given a second objective: to operate as an aid in the conduct of research

matters concerning primary health care. The second objective is closely connected with the current tendency in the Dutch research world to co-ordinate scientific research to a greater extent through better programming of the research and, as a result, better control of it.

As part of this trend, the present aim is to lay down research policies for important areas of health care research. Proceeding on the W.H.O. objective of "strengthening primary care" (an objective which is also endorsed by the Dutch Ministry of Public Health and Environmental Hygiene), primary care is sure to be one section to receive explicit attention. It is hoped that this article may be a useful aid in this respect. But apart from these two more or less permanent objectives of the Registration System, this book pursues another goal: the communication abroad of knowledge of the scientific research conducted in the Netherlands in the field of primary care.

In the Netherlands many investigations are carried out in the field of primary care. Seldom, however, the results of this research have been published in a foreign language. This is to be regretted, for the scope of Dutch-spoken civilization is but small. Knowledge and experience acquired here in the Netherlands hardly ever cross the border. Therefore, in this article, we shall present a survey of

- what research in and into primary health care has been conducted in the Netherlands during the past ten years
- what developments have occurred in the course of the years
- which areas of research have evolved well and where the gaps are
- what kind of relationship there is between university-based and other research, between research originating in institutions and research by individual general practitioners
- what return the research projects yield in the form of publications.

With this, we hope to make Dutch research in the field of primary health care more widely known. And this, then, is the most important aim of this book.

Research in the field of primary health care:
a definition

For the purpose of this survey, the following general definition has been formulated:

The problem definition of the research project or at least one of the subsidiary problem definitions must concern the structure, the organization or the functioning of primary health care as a whole or of one or more of the disciplines working in it.

On the model of suggestions made in this connection to the Ministry of Public Health and Environmental Hygiene, the following disciplines were considered to belong to primary health care

- general practitioner
- district nurse
- social worker
- physical therapist
- midwife
- family visitor
- dentist
- sick attendant
- pharmaceutical chemist
- dietician
- other professional help.

In the Netherlands, the division between primary care and other sections of health care is much sharper than in most other countries. This appears, e.g., from the fact only primary care workers are freely accessible to patients (and even of these some are not; a physical therapist, e.g., can not be consulted until a referral has been provided by a general practitioner). If a patient wants to visit a specialist, e.g., the patient must first ask a referral card from the general practitioner. This strict separation a primary care and other sections

of health care we also maintained in this article.

Thus, what has been left out of the survey is:

1. All research into basic health care (public health, the mass population screenings and other general inquiries) excluding, however,
 - a. well-baby clinics (because in all cases district nurses and often general practitioners as well are involved in their work);
 - b. dental care (because equally here no clear line could be drawn between primary care and basic health care).
2. All research in or into secondary and tertiary health care both somatic and mental (i.e. specialist care and mental health care).
3. All research in which research data are collected directly among the population without any intervention of primary health care workers and where the problem definition does not indicate in how far the structure, the organization or the functioning of primary health care or any of its subdivisions is concerned.

If we submit the research projects to these critical criteria for selection, and remove all investigations of which the relation with primary care is doubtful, we are left with all in all 452 investigations. These 452 investigations are what the rest of this article is about.

One may wonder in how far these 452 investigations render a complete picture of the research conducted in the Netherlands during the past ten years in the field of primary health care.

It can also be doubted whether the location of the Registration System (in the Netherlands Institute of General Practitioners) would not result in a one-sided selection from among the investigations. We tried to find this out by means of a few interviews we had with key figures in other areas of work. The impression is that this article gives a fairly representative view of the situation. The only systematic bias we were able to trace concerns research in the field of dental care. In this

category, under-reporting seems to have taken place. But now some figures.

Numbers of new research projects throughout
the years

For several reasons, it might be expected that the number of new research projects in and into primary health care would increase over the years. In the first place, by the end of the sixties and in the beginning of the seventies, general practitioners' institutes came into being subsequently in all Dutch universities; a development that had fully matured around the middle of the seventies when all general practitioners' institutes had become fully staffed. Besides teaching, the conducting of scientific research is one of the main tasks of these institutes. At government level, too, increasing attention has come to be paid to primary health care in the course of the period under review. Ever since the so called "Structure Memorandum" of the Dutch Ministry of Public Health and Environmental Hygiene was published in 1974, the policy-related intentions of this Ministry have focused on the development and reinforcement of primary health care. In theory, these intentions could affect the number of new research projects, in this field in two ways. First, very generally, through the reallocation of resources from specialist research to primary care research, in order to enable primary care to take up its own development more effectively. But also quite directly, in that the Ministry itself might grant research commissions for the planning and evaluation of its own policy which is directed at reinforcement of primary care.

Figure 1, however, shows that no increase in the number of newly registered research projects is apparent.

Figure 1.: Research in and into primary care: 1971-1980
incl.

A rise, though, can be observed in 1974, the year of publication of the said Structure Memorandum (this, however, is immediately in 1975, followed by a decline), and a second rise in 1977 which is less easily explained. The the total graph, however certainly fails to show an increase, perhaps it rather shows a slight decline (i.e. during the last three years). Now the number of new research projects is not the only standard used to measure research efforts. The scope of the projects is another one. Regrettably, we have no data on the financial dimensions of the projects. Yet, inquiries were made into the estimated duration, which is an indication of the project's scale as well. In tabel 1. these data are grouped concerning two basic periods. (1971-1975 inclusive and 1976-1980 inclusive).

Table 1.: Estimated duration of projects*

	total			1971-1975 incl.			1976-1980 incl.		
	< 2 years	≥ 2 years	N	< 2 years	≥ 2 years	n	< 2 years	≥ 2 years	n
general practitioners' institutes in universities	33%	67%	67	38%	62%	37	27%	78%	30
other university institutes	38%	62%	42	38%	62%	29	38%	62%	13
TNO Health Organization	27%	73%	11	25%	75%	8	33%	67%	3
government-aided institutes	43%	57%	60	55%	45%	33	30%	70%	27
general practices	57%	43%	64	62%	38%	42	36%	64%	22
others	58%	42%	12	50%	50%	6	67%	33%	6
total	108 (42%)	148 (58%)	256	74 (48%)	81 (52%)	155	34 (34%)	67 (66%)	101

* Of some investigations, returns on the estimated duration are not available. Therefore, this table has a smaller n.

We then see that the percentage of research projects of longer duration than two years increases considerably (from 52% to 66%). The last measure of ascertaining the extent of primary care research is the percentage of projects that is successfully concluded - i.e. by publishing the results. Table 2. shows in what way the investigations were terminated. Here, too, two five-year periods have been distinguished.

The most interesting figure in this table is provided by category 5: "ceased without publication". All in all, about a fourth of primary care research was ceased without the results being published.

The majority of these failures, however, took place in the first five-year period (n = 80). In this period, premature termination even was the commonest manner of ending. That percentage fell steeply in the second five-year period.

Table 2.: Manner of termination (publication)

	total		1971-1975 incl.		1976-1980 incl.		corr.%*
	N	%	N	%	N	%	
1. international report or review	39	9%	15	7%	24	11%	(18%)
2. public report or book	97	21%	60	27%	37	16%	(27%)
3. article in perio- dical	90	20%	52	23%	38	17%	(28%)
4. doctor's thesis	27	6%	19	8%	8	4%	(6%)
5. stopped without publi- cation	110	24%	80	35%	30	13%	(22%)
6. current research	89	20%	-	-	89	40%	
total	454	100%	226	100%	226	100%	

* A corrected percentage has been calculated making use of the completed projects (as a consequence, current investigations have not been included).

In summary, we can state - somewhat surprisingly - the number of new research projects in and into primary care did not increase between 1971 and 1980. Yet, the new projects did become more extensive and the research output increased considerably, at least, if in measuring this we can go by the percentage of investigations that is concluded with external publication of the results.

The working organizations

Table 3 presents a fairly detailed view of which institutes or research workers make the research efforts for primary care.

Table 3.: Number of investigations for each institute in either five-year period

institute		total	%	1971-1975 incl.	1976-1980 incl.

	II.3. Other TNO Institutes	1	-	1	-	
	sub-total	26	6	16 (7%)	10 (4%)	
III Grant- aided Inst.	III.1. Netherlands Institute of General Practitioners	44	10	20	24	
	III.2. Other Health Institutes	34	8	15	19	
	sub-total	78	17	35 (15%)	43 (19%)	
IV General practices	IV.1. Group Practices/health centres	48	11	27	21	
	IV.2. Individual physicians	55	12	38	17	
	sub-total	103	23	65 (29%)	38 (17%)	
V.	Other institutes, Municipal Medical & Health Services, coordinating organizations, etc.	27	6	9 (4%)	18 (8%)	
total		452	100%	226	226	

We see that the Dutch universities account for nearly half of all primary care research. The largest part of this (30% in total) is carried out by General Practitioners' Institutes of the universities, with Nijmegen being the obvious leader. But other university institutes also conduct research in the field of primary health care, particularly those of social medicine and the behavioural sciences. A comparatively large amount of research is conducted in the research institutes grant-aided by the Ministry of Public Health and Environmental Hygiene, among which the Netherlands General Practitioners' Institute with its share of 10% of all primary care research is easily first - no wonder, for that matter, in view of the ministerial intention to allow this institute to grow into an institute for the whole of primary health care.

Further, it is noteworthy that single general practitioners perform such a large share of all primary care research: no less than a fourth of primary care research is conducted independently of any official research institute. Especially group practices and health centres remain fertile ground for research (an important phenomenon that is often forgotten in the discussions on the usefulness of group practices and health centres!) It is true, though, that the number of non-institutional investigations diminished in the course of the years; probably because many of their staff were attracted by the university institutes.

It is an alluring prospect to analyse the effectiveness of the various main groups' research projects more closely. Table 4. presents the figures. In it, the same classification as in tabel has been maintained.

Table 4.: Manner of termination for each group of institutes

	general practitioners' institutes in universities	other university institutes	TNO Health Organization	grant-aided institutes	general practices	other	total
internal report or review	9%	12%	19%	4%	6%	11%	9% = 39
published report or book	10%	19%	35%	55%	6%	37%	21% = 97
article in periodical	25%	21%	19%	6%	26%	7%	20% = 90
doctor's thesis	8%	6%	4%	1%	8%	7%	6% = 27
stopped without publication	20%	28%	8%	14%	40%	19%	24% =110
pending research	28%	15%	15%	19%	15%	19%	20% = 89
total	132	86	26	78	103	27	100% =452

To a certain degree, this table puts the optimistic views of non-institutional research in a less favourable perspective: no less than 40% of such research ends up without being published. It is a pity that of the research efforts so much should be lost in this way. These prematurely terminated projects yet occur mainly in the first five-year period and include the soloist practitioners who do not succeed in crowning their investigation by publication. The output of group practices and health centres is higher. We can derive another conclusion from the table: that the original form of publication (i.e. the way in which research is concluded) is different for each kind of research organization. For

the staff of university institutes and "detached" research workers an article in a periodical is the most-used form of publication in comparison with other groups. For grant-aided institutions and also for TNO-departments, it is a research report. An explanation is furnished by the fact that in these institutions contract research is the rule, which implies that at the end of a project a report must be submitted to the principal. Finally, it should be noted that, if compared to university institutes, only few research projects in grant-aided institutions culminate in a doctor's thesis. Here, too, contract procedures and the character of the research conducted by these institutions which is that of applied science, are sure to make their influence felt.

A rough classification of research themes——

To provide an understanding of the subjects on which primary care research focuses, we divided the research projects in three main groups:

1. Research which deals with overall health care as far as explicit attention is paid to primary care, including research into the relationship of primary to other sections of health care.
2. Research concerned with primary care as a service system including research into bilateral and multidisciplinary collaboration in primary care.
3. Research which concentrates exclusively on one of the disciplines operating in primary care.

Each of these three main groups is further subdivided in a number of subcategories (see table 5.).

Table 5.: Classification of primary care research

	total	1971-1975 incl.	1976-1980 incl.
1. Research into the whole of health care (incl. primary care)			
a. general	21 (5%)	6	15
b. primary-secondary/ tertiary care relation	46 (10%)	19	27
c. primary-basic care relation	3 (1%)	3	-
d. primary care-self-help relation	9 (2%)	-	9
sub-total	79 (17%)	28	51
2. Research in or into primary care as health service system			
a. general	25 (6%)	9	16
b. health centres and other multidisc. collaboration	34 (8%)	20	14
c. bilateral collaboration	18 (4%)	14	4
sub-total	77 (17%)	43	34
3. Research in or into one primary care discipline			
a. general practitioner	242 (54%)	124	118
b. district nurse (incl.well-baby clinics)	26 (6%)	16	10
c. social worker	8 (2%)	6	2
d. physical therapist	1 (0%)	-	1
e. midwife	-	-	-
f. family visitor	2 (0%)	2	-
g. dentist	12 (3%)	6	6
h. sick attendant	-	-	-
i. pharmaceutical chemist	1 (0%)	-	-
j. dietician	-	-	-
k. other disciplines	2 (0%)	-	2
l. supportive disciplines	2 (0%)	1	1
sub-total	296 (66%)	155	141
total	454	226	226

If we consider the total column, we see that the large majority of primary care research (66%) falls in the third category: research into one discipline. Of this, the major part in its turn goes to the general practitioner and general medicine (82%). The general practitioner remains the central figure in primary health care, also with regard to research focused strictly on one discipline only. The categories I and II (of "health care" and "primary health care" respectively) each account for no more than 17% of research as a whole. For all this, though, this feature has been changing for some time, and in particular an increase in research focusing on more than one section of health care has been manifest. Especially research into the relationship between primary and specialist/intramural care has become a favourite. In absolute numbers, this is the second most frequent research subject (10% of all projects), after research concerned exclusively with the general practitioner (54%). Third is research into multi-disciplinary co-operation (8%). Noteworthy are further research concerning nurses (including well-baby clinics): 6%, and research concerning health care in general (5%) and primary care in general (6%). The numbers in other categories are insignificant when compared to the whole. But now we can have a closer look.

Research into the whole of health care (with some attention to primary care)—————

We already saw that in recent years research into health care in general with reference to primary health care has enjoyed increasing attention. This kind of research has nearly doubled in the past five years in comparison with the first five-year period. This increase is largely due to so-called "health services research": research into health care as a system. In the "general" category, e.g., this type of research accounts for two thirds of the aggregate. "Planning", "organization", "control", "cost", and "financing" are the key words. The preparations for

the Health Care Facilities Act are manifest in the new research projects of several institutes. Another development is that more often than before, the patients are asked for their opinion on the relative functioning of various sections of health care. This sometimes concerns the opinion of health care generally, but more often that of specific forms (assistance to drug addicts, counseling on sexual problems, etc.). We may mention seven such inquiries in the past five years against a single one in the first five-year period. The relation between primary and secondary health care is, as we already observed, one of the most popular areas of research. But while in theory relationships between all primary health care workers and the entire secondary care could come into consideration, we yet find that in the majority of research projects the attention is concentrated on the relation of general practitioner to specialist, and even remains restricted to its quantitative aspects, the referrals. In more general terms, table 6. shows (convincingly) that the specialist/ intramural level of somatic health care receives much more attention than mental health care and that general practitioners receive much more attention than their fellow primary care workers.

Table 6.: Research into the relationship of primary and secondary care

	secondary	secondary	both	total	
	somatic	mental		n	%
general physician	36	4	-	40 (89%)	
district nurse	1	1	-	2 (4%)	
collaborative arrangements	-	2	1	3 (7%)	
total	37 (82%)	7 (16%)	1 (2%)	45	

Whoever would have expected that the increasing pre-occupation with reinforcement of primary health care, collaboration at primary health care level, etc., would be reflected in a relative decline of the exclusive concentration on the relation of the general practitioner to the specialist, must be deceived. From table 7. (where for both five-year periods studies concerning the G.P.-specialist relation are contrasted with all other forms of research into the relation of primary and secondary care) it appears that rather the reverse has happened (significance at 10% level).

Table 7.: Research into the relationship of primary and secondary care in either five-year period

	1971-1975 incl.		1976-1980 incl.		total
	n	%	n	%	
general practitioner- specialist	13	(36%)	23	(64%)	36
other relation- ships of primary secondary care	6	(67%)	3	(33%)	9
total	19	(42%)	26	(58%)	45

Research into the primary - secondary care relationship is also more popular than research into primary care and other sections of health care. In particular the relation of primary care to basic health care has not been inspiring enough for a single investigator to study it.

This is to be regretted, for, just as co-operation is needed and tensions exist between the primary and secondary levels of somatic and mental health care, the same may be expected to be true of primary care

and basic care.

This area of research is underdeveloped. There has been, on the other hand, considerable awareness, especially during the past five years, of self-help and non-professional assistance from the patient's direct environment and their relationship to professional services. But here, too, it is remarkable that while the Cross Organization (i.e. the nationwide organization of district nurses) has been the first of primary care organizations to refer expressly to self-help in its policy-planning, yet hardly any research into the relation of district nursing to self-help has resulted. Most studies in the field of self-help are either focused on the relationship with the general practitioner or on the phenomenon itself.

Research in or into primary health care————

The notion of "primary health care" as referring to a separate system of services has arisen in the course of the period under review. At first as a diffuse idea understood differently by each writer; later on more clear-cut and more strictly defined. The already been mentioned Structure Memorandum and the Outlines of Primary Health Care have been crucial memorandums in that they contributed to the notion's taking on definite shape and being accepted in the world of primary health care.

It also happened in the period under review that the idea of primary health care gained political importance. "Strengthening primary health care", even at the cost of secondary care, is included in the official policy planning of the Ministry of Public Health. Do we see all this reflected in research? At first cursory glance, table 1. is disappointing. For, really not much research is conducted in primary health care at all and moreover the number of new studies seems to decrease over the years. A closer examination of the research project in this category throws a somewhat different light on the disappointing data. In the first half of the period under review,

we especially find research into bilateral and multi-disciplinary collaboration (75% of the aggregate research of this period). Health centres in particular attracted much interest between 1971 and 1976. During the last five years, a shift has occurred towards research into the service system at primary level: inventories of collaboration arrangements and - on a line with what we observed in the preceding paragraph - much reference to organizational forms, planning and control, financing problems and the like. Here, too, health services research receives increasing attention. Between this type of research in the main group of "primary care" and the main group of "health care" the differences often are tiny and unessential (think e.g., of studies of the primary - secondary care relationship). All taken together we may therefore conclude that the pre-occupation with bilateral and multidisciplinary collaboration flourished in the first five-years period. At present much research is conducted into primary health care as a service system and the relationships of this system to other service systems (such as secondary care).

A few more findings:

- most of the research is of a descriptive nature. Research into the effectiveness or efficiency of multidisciplinary primary care is rarely found. In no more than ten studies the evaluative character prevails (as against 34 studies in which an inventory or a process description receive the main stress).
- Research into joint support of primary care is rare and all of it (n = 3) is of a recent date. In this connection we mention studies of multidisciplinary post graduate courses (on birth control), of (a method of) multidisciplinary patient reviewing and of a multidisciplinary classification list to be evolved.
- It is further remarkable that in the first five-year period many inquiries were made after the

patients' opinion of the (new) health centre (n = 5). Financially the transition from singlehanded practice to health centre was at the time often accompanied by investigations. This type of research is no longer found in the past five years.

- Researches into bilateral collaboration (n = 17) mainly took place in the first five-year period (76%). At present this kind of research attracts little interest. With two exceptions the general practitioner was one partner in the collaborative arrangement. (The two exceptions concerned district nurses). The other partner was, in order of incidence, the psychologist (8x), the social worker (5x) and the physical therapist (3x). Other disciplines were not represented. Thus, once more we find here a disproportionate concentration on some primary care disciplines while other disciplines appear hardly or not at all.

Research into or in one primary care discipline

The prominence of the general practitioner is most evident when we consider main group III - research focused on a single discipline, 80% at first, later even 84% of researches in this category concentrate on the general practitioner. Especially during the first few years, district nursing enjoyed a degree of interest in the research sphere (due mainly to the stimulating and initiating role taken by SSLK, the forerunner of the National Cross Organization), but for the rest the map shows many blanks. With obvious consequences, the general practitioner is the only primary care worker to have a university background. The other occupational groups not only lack this academic support, but even the interest of other research institutes.

So the study of the general practitioner attracts many interested investigators, so many that a separate paragraph is justified.

Studies of the general practitioner—————

Researches that focus on the general practitioner are classified in three categories:

1. research into condition-setting features
2. research into the (overall) morbidity in general practices
3. research into the professional help given by the general practitioner

Table 8. presents an overview for both five-year periods of the research classified in these categories. (Table 8: see next page).

1. Research into condition-setting features

Nearly a fourth of the investigations focused on the general practitioner (23% = 12% of aggregate primary care research) concerns the condition-setting feature of the trade of a general practitioner. The majority of this is devoted to research into organizational aspects of practice management by the general practitioner (problem-oriented registration, automation, diagnostic aids, etc.). Also 16 studies were counted which involve quality improvement and control (training, postgraduate courses, testing). Research into the structure of the occupational group of general medicine constitutes the last category, which has resulted in a continuous stream of (partial) studies and reports. Apart from the latter development no trends can be pointed out within this main group.

2. Research into the (overall) morbidity in general practices

The well-known, long-term projects on epidemiological lines belong to this category, such as the Continuous Morbidity Registration of the Nijmegen University General Practitioners' Institute, and the Sentinel Station project of the Netherlands Institute of General Practitioners. A number of incidental morbidity investigations were classified with this category as well, including parts of the 'monitoring project' in Ommoord. The small decrease that emerges from table 8. is artificial and partly explained by

Table 8.: Studies of the General practitioner

	total	1971-1975 incl.	1976-1980 incl.
1. Research into condition-setting features			
a. structure of the profession of general medicine	11 (5%)	1	10
b. organizational aspects of practice management (incl. support)	27 (11%)	15	12
c. training, postgraduate courses, testing	16 (7%)	8	8
sub-total	54 (23%)	24	30
2. Research into (overall) morbidity in general practices	26 (11%)	15	11
3. Research on patient care by general practitioners			
a. general	35 (14%)	14	21
b. in respect of specific groups of population (old-age pensioners, women, etc.)	19 (8%)	16	3
c. in respect of the treatment of specific complaints			
- cardiovascular disease	26 (11%)	8	18
- other chronic illness	15 (6%)	10	5
- psychosomatic complaints	14 (6%)	7	7
- obstetrics	6 (2%)	2	4
- various	35 (14%)	23	12
d. prescribing medicines	12 (5%)	5	7
e. referrals: see primary-secondary care relationship	p.m.	p.m.	p.m.
sub-total	162 (67%)	87	75
total	242 (100%)	124	118

the long-term projects which were all counted among the first five-year period projects.

3. Research into the professional help given by the general practitioner

In the Netherlands much research is directed at the services rendered by the general practitioner. This kind of research comprises 67% of the investigations concentrating on the general practitioner and no less than 36% of aggregate primary care research! A large proportion of such research concerns professional help methods in general. The relationship of general practitioner to patient is a favourite subject, as is the decision procedure that general practitioners use in their work. Recently, investigators have also become interested in Methodical Working as introduced by the Netherlands College of General Practitioners. In the first five-year period inquiries were made regularly into the help general practitioners gave to specific groups of the population (such as women and old-age pensioners). In the second five-year period this type of research greatly diminished (e.g., hardly any research is conducted into the services rendered to groups that are now considered vulnerable, such as immigrants, unemployed persons). The help given with various complaint patterns, on the other hand, is extensively studied. In this, a noticeable change in the course of time from research in connection with diffuse and wide-spread complaints to a limited number of clear-cut complaints. Most popular is research into the detection and treatment of cardiovascular disease, but other chronic illness also score high. A third important category is research into the treatment of psychosomatic disorders. Finally it appears that the task of the general practitioner in obstetrics and juvenile health care is regularly studied. A common feature of the above complaints is that all of them have links with the pressures between primary care and neighbouring sections. This apparently lends an extra stimulus to research. The last group to be mentioned must be the investigations of the prescribing of

medicines by the general practitioner. Although prescribing medicines is a common phenomenon in a general practice (in 60% of visits the interview is concluded with a prescription being given), we find that the extent and manner of prescribing by the general practitioner are the subject of comparatively little research; and decidedly so if we contrast it with the researches made of other modes of treatment open to the general practitioner, in particular the referrals to the medical specialist (see p. 23). This is the more remarkable if we bear in mind that the consumption of medicine is an important cost item in health care. Here, too, an underdeveloped area to lie waiting.

Summary and conclusions ---

In the foregoing, a general overview was presented of the past ten years of research carried out in the Netherlands in the field of primary health care. A general overview only. For a more detailed survey the reader is referred to the reports from the Registration System for Current Research in and into Primary Care published by the Netherlands Institute of General Practitioners. This summer a special report will be published in English with a detailed description of all the 452 research projects that have been carried out during the last ten years (including the names and addresses of the researchers).

What stands out clearly is who in the Netherlands conduct research in the field of primary health care: about half of it is for account of the universities; a relatively large amount is carried out by government-aided institutes, and - unexpectedly - by individual general practitioners, who may or may not work in group practices and health centres. A few tendencies emerge from the survey. Another unexpected finding is that the number of investigations made in and about primary care fails to show an increase with time, in spite of all planning aimed at strengthening primary care. It is true, though, that the investigations have a longer average duration and

are more frequently concluded with external publications. Less obvious is the fact that by far the majority of researches concentrates on the general practitioner (and medical care). With this result, the age-old idea that the general practitioner is the central figure in primary care is not only confirmed once again, but even reinforced! Indeed, the other primary care disciplines are hardly given a chance to define themselves by means of research. The lack of an academic tradition behind these disciplines is probably to blame, as well as the absence of research bodies with a traditional orientation towards the other primary care disciplines or pressure groups to push research in their own field of action. In this connection it is worth mentioning that at the beginning of the seventies the functioning of district nurses was comparatively much studied. This happened at the time when the SSLK (forerunner of the National Cross Organization) was actively engaged in stimulating research and had found, in the ITS (Institute of Applied Sociology), a research institute who was willing to conduct a series of research projects in this field.

All this, however, slackened with time (at present the National Cross Organization no longer has an active policy regarding research and neither has it any research projects of its own in hand).

We further see that in general medicine a concentration of research activities has taken place. In the course of time the subjects to attract much notice have clearly come to be restricted in number. The relationship of primary to secondary care (including referrals) is one of them. This theme has manifestly evolved further than other themes which are concerned with the general practitioner's activities on the one hand and the cost of health care on the other (for there often is a connection). In this context we think, e.g., of the prescribing of medicines, which as a subject of research clearly lags behind the

study of referrals. In investigations concerned with typical general medicine a distinct focusing of research activities has occurred as well. Much attention tends to be paid here to cardiovascular disease and, more generally to complaints lying on the border of general medicine and its neighbouring sections. In itself such a concentration of research activities is a reason to rejoice. It ensures the accumulation of knowledge because investigators may benefit from the results and methods of each other's research. However, it also implies that specific areas are systematically passed over. This survey aims at finding such gaps.

Jozien Bensing

I
Research into the whole of health care————

a. general

=====HEALTH

title Health questionnaire
investigator J. v.d. Berg, Centraal Bureau voor
de Statistiek, Voorburg
duration 1977 - on its way
publications 1. Articles in:
Monthly Bulletin of Health
Statistics
2. Tables in:
Compendium Health Statistics of
the Netherlands
Regular publications by the Nether-
lands Central Bureau of Statistics

abstract-----
Detecting disorders, disease etc. by way of their
consequences

=====PROFESSIONAL HELP

title Research into welfare work for drug
addicts
investigator F. de Boom-van Duin, J.P. Bastiaenen,
Stichting Itoba Aalsmeer
duration 1977-1980
publications Boom-van Duin F. de, J.P. Bastiaenen
'Welfare work and services for drug
addicts', summary, conclusions,
recommendations. Separate studies:
1. The Arnhem area, December 1979
2. The Groningen area, March 1980
3. The Amsterdam area, December 1979

abstract-----
A study of the methods of treatment and the conditions
that stimulate or hinder co-operation

=====HEALTH CARE, POLICY-MAKING

title Decision-making in public health regions

investigator J.M. Boot, M.H.J.M. Knapen, Instituut voor ziekenhuis wetenschappen, Utrecht

duration 1979 - on its way

publication Boot, J.M., M.H.J.M. Knapen
1. 'Staffing the boards of general hospitals', 1980
Boot, J.M.
2. 'An outline of Dutch health care; notes on its extent, cost and policies', 1980

abstract-----
No further information available

=====HEALTH CARE, FACILITIES

title The desired spacing of het services network

investigator J. Buit, E.F. Nozeman, Geografisch Planologisch Instituut, Amsterdam

duration 1973-1976

publication Nozeman, E.F.
'The views entertained by interested entrepreneurs concerning either a dispersed or a concentrated pattern of services in new housing estates', Separate memoranda A and B, 1974/1975

abstract-----
An inventory of the widest possible range of opinions held by those involved on the advantages and drawbacks of several types of distribution patterns of services

=====HEALTH CARE, FACILITIES

title The desired spacing of the services
 network

investigator J. Buit, E.F. Nozeman, Geografisch
 Planologisch Instituut, Amsterdam

duration 1973-1976

publication Nozeman, E.F.
 'The desired spacing of the services
 network', Separate memoranda C and
 D, 1975/1976

abstract-----
An inventory of expert opinion about what is possible
and impossible in the regulating of facilities (both
commercial and social services) by governments and
others via official and unofficial channels. Pros and
cons of centralization and decentralization.

=====PRIMARY-SECONDARY CARE RELATIONSHIP

title Hoogeveen (continued project).

investigator J.P. Dopheide, M. Swinkels, Neder-
 lands Huisartsen Instituut, Utrecht

duration 1979-1982

publication Dopheide, J.P., G.J.M. de Cock,
 J.J. Witte
 Preliminary investigation into the
 integration of primary and secondary
 care at Hoogeveen, November 1978.

abstract-----
A study of the degree of integration between the
various health care facilities at Hoogeveen
(particularly that between primary and secondary
care and the effect it has on flows of patients).

=====PSYCHO-SOCIAL PROBLEMS

title Professional help for sexual problems in the Netherlands; evaluation of sex therapies

investigator Prof. Dr. J. Frenken, Nederlands Instituut voor sexuologisch onderzoek, Zeist

duration 1977 - on its way

publication no publication available

abstract-----

1. An inventory of "Who does what, where and how" in the treatment of sexual problems
2. Effects of sexual therapy and treatment.

=====PSYCHO-SOCIAL PATIENT CARE

title Welfare work concerning sexual problems; an investigation among 250 welfare workers

investigator Prof. Dr. J. Frenken, Dr. N. Rodenburg, Nederlands Instituut voor Sexuologisch Onderzoek, Zeist

duration 1980 - on its way

publication no publication available

abstract-----

Professional workers in primary and secondary health care (both physical and mental). What conceptions and attitudes in respect of sexual help can be shown to exist? In what way are complaints handled? Determinant factors in patient care behaviour. Obstacles to treatment. Interaction between those seeking and giving help. The need of further training workers in this field. The TV course

'helping with sexual problems' as a method of further training: its members, their study conduct and the effects. Recommendations for extra sexuological training of doctors, medical specialists, psychologists, social workers, nurses, pastors, ministers, volunteer workers.

=====HEALTH CARE, POLICY-MAKING

title Health questionnaire and policy-making

investigator G.A. de Jong, Erasmus Universiteit
Instituut voor Maatschappelijke
Gezondheidszorg, Rotterdam.

duration 1980 - its on his way

publication no publication available

abstract-----
The value of policy research has been overestimated: it is only one of the contributing factors in the policy-making process. The influence of more fundamental research should not be disregarded; at the moment university departments neglect their primary task of conducting fundamental research.

=====HEALTH CARE, POLICY MAKING

title The possibilities of regional
 budgetting

investigator W.A. Koch, Nederlands Instituut
 voor Praeventieve Gezondheidszorg,
 Leiden

duration 1980 - on its way

publication 1. Koch, W.A.
 Health care in the Twente area
 in a regional perspective, a
 financial review, 1979

 2. Koch, W.A.
 Regional budgets in health care
 Econ. Stat. Berichten 64 (1979)
 3216, pp. 792^{ff}

abstract-----
No further information available.

=====HEALTH CARE, FINANCIAL

title Manual for the design of regional
 financial reports

investigator W.A. Koch, Nederlands Instituut voor
 Praeventieve Gezondheidszorg, Leiden

duration 1980 - on its way

publication Koch, W.A., Financial reports and
 financial limits in health care ,
 Econ. Stat. Berichten 65 (1980)
 3263 (16 July), pp. 808-812.

abstract-----
The project aims at achieving:
- an improvement in national financial reports;
- the possibility of regional comparisons;
- the first steps toward regional budget financing

=====PROFESSIONAL HELP

title Structure and social welfare
investigator Th. Miltenburg, Instituut voor
 Sociale Geneeskunde, Amsterdam
duration 1977-1979
publication Miltenburg, Th.
 Structure and social welfare, 1979

abstract-----
To gain an understanding of the relationship between
social structure and the organization pattern of
health and welfare care on the one, and referrals
among the various types of care on the other hand.

=====HEALTH CARE, STRUCTURE AND FUNCTIONING

title The development of the health
 services operating in and for the
 southern IJsselmeerpolders
investigator P. van Noord, R. Zoutendijk,
 Nederlands Instituut voor Praeven-
 tieve Gezondheidszorg, Leiden.
duration 1978-1980
publication Noord, P. van, R. Zoutendijk,
 The development of health care in
 the southern IJsselmeerpolders:
 the possibilities and impossibilities
 of planning illustrated, 1979

abstract-----
no further information available.

=====HEALTH GUIDANCE AND EDUCATION (G.V.O.)

title Evaluation of the organizational structure of a number of regional projects for Health Guidance and Education (G.V.O.)

investigator C. Passchier, Ministerie van Welzijn, Volksgezondheid en Cultuur, Leidschendam

duration 1977-1980

publication Passchier, C., H. Tjassing co-operating toward G.V.O., june 1980

abstract-----

This concerns the functioning of a collaborating entity in which a number of organizations from health care/welfare are represented.

=====HEALTH CARE, STRUCTURE AND FUNCTIONING

title System analysis as a device in planning health care

investigator E.W. Roscam-Abbing, Instituut voor Sociale Geneeskunde, Amsterdam

duration 1972 - on its way

publication no publication available

abstract-----

The results of the legal and financial measures taken from 1966 onwards which were to be expected on the basis of the systems theory, as compared to the actual results.

=====PROFESSIONAL HELP

title Opinions on aspects of welfare work
for young people in the Amsterdam
conurbation

investigator M. Schelvis, Interact B.V.

duration 1975-1977

publication Schelvis, M.
Welfare work about aspects of
welfare work for young people in
the Amsterdam conurbation, 1975
(report)

abstract-----
A primary investigation held at Amsterdam.

=====PSYCHO-SOCIAL PROBLEM

title On a national scale, gauging opinion
among all welfare institutions for
young people on the subject of
harmful aspects of sexual contacts
children may have with people older
than themselves

investigator W.J. Sengers, W. van Rijssel,
Erasmus Universiteit, Instituut
voor Praeventieve en Sociale Psy-
chiatrie

duration 1977-1977

publication Sengers, W.J., W. van Rijssel
Pedophilia and society, 1977
(report)

abstract-----
No further information available.

=====HEALTH CARE, STRUCTURE AND FUNCTIONING

title The conduct of regional health care
investigator G.R. Visser, Landbouw Hogeschool
Vakgroep industriële bedrijfskunde
duration 1977-1980
publication Thesis is being prepared

abstract-----
Supplying the groundwork for bringing about
regionalized health care in South Limburg.

=====MEDICAL CONSUMPTION

title Medical consumption
investigator R.C.J.A. van Vliet, W.P.M.M. van de
Ven, B.S.M. van Praag, Centrum voor
Onderzoek van de Economie
duration 1976-1981
publication Ven, W.P.M.M. van de, F.A. Nauta,
R.C.J.A. van Vliet, E.H.H. Rutten,
inventory and backgrounds of
consumption differences between
Health Fund and privately insured,
1980 (report)

Article as above, 1980
Gezondheid en Samenleving (1980)
pp. 224-254

abstract-----
1. Which are the explanatory variables for the demand

- for health care?
2. Which variables are typical of the group of privately insured patients and which for Health Fund insured?
 3. To what extent do the variables mentioned under 1. contribute to variations in the use of intramural care as found by the work group 'Consumption variations among Health Fund and privately insured' and to the variations in the use of primary care and outpatient care?

=====HEALTH INSURANCE

title Public health insurance
investigator V.Chr. Vrooland
duration 1974-1977
publication Vrooland, V.Chr.
 Public health insurance 1977
 (report and small brochure)

abstract-----
Analysis of the organization and financing of health care.

=====HEALTH CARE, FACILITIES

title Regional planning of health care
 facilities

investigator J.J. Witte, Nederlands Instituut
 voor Praeventieve Gezondheidszorg

duration 1977-1980

publication Witte, J.J., G.A. Vival
 Regionalization and health care, an
 exploration in the Kennemerland-
 Leiden area 1980 (report)

abstract-----
To acquire an understanding of the planning aspect
of a regional development of health care, focusing
on the question what information is required to
achieve regional planning.

b. Primary-secondary/tertiary care relationships

===== HOME CARE

title Follow-up examinations of hospital patients

investigator C.W. Aakster, Rijksuniversiteit Leiden, Vakgroep Huisartsgeneeskunde

duration 1976-1978

publication No publication available

abstract-----
An attempt to account for differences in the follow-up care given by general practitioners making use of variations in practice list composition attitude of the G.P., etc.

===== REFERRALS

title Referrals

investigator D.L. Arntzen, Huisartsen Instituut der Vrije Universiteit Amsterdam

duration 1977-1980

publication No publication available

abstract-----
An inquiry into the social and other factors that come into play in the referring process.

=====PRIMARY-SECONDARY CARE RELATIONSHIP

title Liaison team study
investigator L.C. Aukes, W.H. Gruffen, Instituut voor Sociale en Bedrijfspsychologie Groningen
duration 1976-1980
publication Aukes, L.C.
Restoring the unity of medical action in conformity with the rehabilitation model and clinical-psychological concepts, 1980 (report)

abstract-----
In practical experiment designed to intensify communication with the patient and communication between hospital and extramural practitioners, and improve its structural aspects.

=====CONSULTATION

title Eindhoven consultation project
investigator J.M. Bensing, R. Kluwer, H. Schut, P.F.M. Verhaak, Nederlands Huisartsen Instituut, Utrecht
duration 1977-1979
publication Bensing, J.M., R. Kluwer, H. Schut, P. Verhaak
Eindhoven consultation project:
part 1 - final evaluation
part 2 - process description
part 4 - prescribing medicine
part 5 - interviewing technique
1980 (reports)

abstract-----
Evaluation of a consultation experiment.
The project supplied more detailed information on essential and highly complicated professional

activities of general practitioners, such as referring and prescribing medicine. It provided some clarity as to the behaviour of general practitioners in their surgeries through an analysis of video tapes made of surgery hours.

=====CONSULTATION

title Eindhoven consultation project -
 the profile of referring

investigator J.M. Bensing, R. Kluwer, H. Shut,
 P.F.M. Verhaak, Nederlands Huis-
 artsen Instituut, Utrecht

duration 1977-1979

publication Bensing, J.M., R. Kluwer, H. Schut,
 P. Verhaak
 Eindhoven consultation project
 referral patherns, part 3, 1980
 (report)

abstract-----
A study of the degree to which consultations between
general practitioners and specialists affect the
referral behaviour of the general practitioners
involved

=====COLLABORATION ARRANGEMENTS

title Registration of collaboration arrangements in primary care

investigator W.G.W. Boerma, J. van der Zee, Nederlands Huisartsen Instituut, Utrecht

duration 1980-1980

publication Boerma, W.G.W., J. van der Zee
1. Group general practices and health centres in the Netherlands: an overall orientation of Dutch health care, 1980 (report)
2. Studies of collaboration: contacts between general practitioners in collaborating entities and secondary care, 1981 (report)

abstract-----
Periodical registration of a number of data concerning health centres and group practices which started in 1970.

=====REFERRALS

title Decision-making and referring in primary care

investigator J. Bergsma, Katholieke Hogeschool Vakgroep Klinische Psychologie, Tilburg

duration 1978-1980

publication Bergsma, J.
The surgery: to the doctor and back home again, 1980 (report)

abstract-----
A study of the stream of patients visiting the doctor, mainly focusing on the geographical, social and personal characteristics of both the patient and general practitioner

=====REFERRALS

title Problems with referrals to the
 ambulatory mental health care
 (A.G.G.Z) by primary care and other
 agencies, Leiden area

investigator C.P.C. Breemer ter Stege, Instituut
 voor Sociale Geneeskunde, Leiden

duration 1980 - on its way

publication No publication available

abstract-----
What difficulties do occur when professional helpers
(such as doctors, social workers) refer patients with
mental problems to institutions for Ambulatory Mental
Health Care in Leiden and environs?

=====HOME CARE

title Follow-up examination of dismissed
 hospital patients

investigator G.J. Bremer, Rijksuniversiteit
 Groningen, afd. Huisartsgeneeskunde

duration 1973-1976

publication ceased without publication

abstract-----
Eight general practitioners examined approx. 1200
patients after dismissal from hospital for the purpose
of finding out what is the duty of the general
practitioner in respect of these patients.

=====VOLUNTEER WORKERS

title Co-operators in mental health care
investigator M.A. Bremer-Schulte, Vrije Univer-
siteit, Sociologisch Instituut,
Amsterdam
duration 1972-1973
publication Bremer-Schulte, M.A.
Co-operators in mental health care:
a study of the functioning of non-
professional workers in encounter
groups, 1979 (thesis)

abstract-----
A study of the functioning of non-professional workers
in encounter groups (in primary care)

=====DIAGNOSTIC CENTRE

title Evaluation of the Oudenrijn
Diagnostic Centre
investigator J.P. Dopheide, D. Wijkkel, D. van de
Grijn
duration 1978-1982
publication Grijn, D. van de, D. Wijkkel
Evaluation project Oudenrijn
Diagnostic Centre
part I: provisional report on
evaluation experiment
part II: supplement, tables and
diagrams
as above, summary, 1981.

abstract-----
To evaluate the influence which the Oudenrijn
Diagnostic Centre has on the relation of primary to
secondary care, both quantitatively and qualitatively.

===== GENERAL PRACTITIONER-SPECIALIST COLLABORATION

title General practitioner-specialist
investigator J.P. Dopheide, Nederlands Huis-
 artsen Instituut, Utrecht
duration 1980 - research has not started
publication No publication

abstract-----

Ascertaining the nature of the relationship, the
attitude of the general practitioner to the
specialist and the referrals of the former.

=====OBSTETRICS

title Subspecialization in the
 professions of gynecology and
 obstetrics
investigator A.C. Drogendijk, Academisch Zieken-
 huis Dijkzicht, Rotterdam
duration 1975-1978
publication Drogendijk, A.C.
 On the boundary of species and
 individual, 1973 (book)

 Drogendijk, A.C.
 Registration of all hospital
 births, Nederlands Tijdschrift voor
 Geneeskunde 12 (1981) 51 pp. 2114-
 2119

abstract-----

An inquiry concerning the opinion entertained by the

first echelon of the functioning of gynecology.

=====ILLNES RELATED BEHAVIOUR

title Subjective awareness of morbidity
investigator H.J.P.M. Dijkhuis, J.D. Mulder,
 J. Theunissen, P.E. Hulshof, Rijks
 Universiteit Leiden, Vakgroep Huis-
 artsgeneeskunde
duration 1979 - on its way
publication no publication available

abstract-----
What factors determine subjective feelings of illness?
Do patients who visit an outpatient clinic feel more
ill than those who go to the family doctor's surgery?

=====REFERRALS

title Referral letters
investigator R. Edens
duration 1976-1977
publication Edens, R.
 Referral letters put to the test,
 Medisch Contact 32 (1977) pp. 311-
 316

Abstract-----
A study of 41 referral letters written by general
practitioners of the Philips Medical Service at
Eindhoven to this service's rehabilitation doctor..

=GENERAL PRACTITIONERS COLLABORATION AMONG THEMSELVES

title Mutual relations of doctors who are involved in the treatment of patients who have suffered a heart attack

investigator W. van der Ende, H. Merens-Riedstra
Nederlands Instituut voor Praeventieve Gezondheidszorg, Leiden

duration 1971-1973

publication No publication available

abstract-----
Attempts at stimulating the collaboration of doctors among themselves.

=====OBSTETRICS

title The general practitioner and obstetrics (childbirth at home and in hospital)

investigator J. van Eijk, Nijmeegs Universitair Huisartsen Instituut, Nijmegen

duration unknow - 1980

publication Becx, H., A. van der Sande, E. Wajan, J. van de Water,
Confinement at home or in hospital, 1980 (report)

abstract-----
Do differences occur in the appreciation of pregnancy, birth and confinement among women who were confined at home and those who were confined in hospital?

=====GENERAL PRACTITIONER/SPECIALIST CONSULTATION

title Differences in strategies of thinking and acting among general practitioners and specialists of internal medicine

investigator J.G.M. Gerritsma, J.A. Smal, Rijks-universiteit Utrecht, afd. Onderwijs Ontwikkeling

duration 1979-1982

publication Gerritsma, J.G.M., J.A. Smal
The methods used by general practitioner and internist, an inquiry by means of interactive patient simulation
(Thesis is being prepared)

abstract-----
By means of simulation in writing, it is attempted to trace the steps general practitioners and internist respectively take to arrive at a diagnosis and further guide the patient.

=====CONSULTATION

title Consultation to the community a descriptive study of the uses of consultation in the Postjeskade Neighbourhood Project

investigator B.P.R. Gersons, Sociale Geneeskunde Amsterdam

duration 1974-1976

publication Gersons, B.P.R.
Consultation to the community, 1977
(Thesis)

abstract-----
A literature research.

===== PRIMARY-SECONDARY CARE RELATIONSHIP

title What is done with the recommen-
 dations made by the child-
 psychiatry outpatient clinic?
 Referral pattern to this clinic.

investigator J. Groen-Prakken, E. Smit-Beek,
 Universiteit van Amsterdam, afd.
 Kinderpsychiatrie

duration 1975-1976

publication No publication available

abstract-----
Investigation\ into the recommendations made and the
observance, if any, of such recommendations; the
investigation also concerns the persons and
institutions referring to the child-psychiatry out-
patient department and the place of residence of the
patients.

===== PROFESSIONAL HELPER PATIENT RELATIONSHIP

title Contact breakers

investigator Y. Hageman-Smit, Instituut voor
 Sociale Geneeskunde, Amsterdam

duration 1971-1973

publication No publication available

abstract-----
Interviews with patients who break contacts with the
general practitioner and social psychological
service, in order to find any reasons that may be
given.

=====HOME-CARE

title From home care to hospital care
investigator J.B.Jaspers, Sociologisch Instituut,
 Amsterdam
duration 1978 - on its way
publication No publication available

abstract-----
An historical-sociological inquiry into developments
in professional health care in the Netherlands since
1945.

=====DIAGNOSTIC CENTRE

title Evaluation of the Maastricht
 Diagnostic Centre
investigator P. Kerkhof, Rijksuniversiteit Lim-
 burg, Medische faculteit, cap.groep
 Huisartsgeneeskunde, Maastricht
duration 1979 - on its way
publication Kerkhof, P.
 Evaluation of the Maastricht
 Diagnostic Centre, report is
 forthcoming (March 1982)

 Dop, P.
 The Diagnostic Centre after three
 years, article is forthcoming
 (August 1982)

abstract-----
A study undertaken to find out what extent and in what

ways the laboratory, x-ray department and other resources of the St. Annadal hospital are being used in the present situation.

=====GENERAL PRACTITIONER-SPECIALIST COLLABORATION

title The relation of general practitioner
 to specialist in the case of people
 affected by cancer

investigator E.J. Keijzer-v.d. Jagt, H.J. Dokter
 Rijksuniversiteit Leiden, Vakgroep
 Huisartsgeneeskunde, Leiden

duration 1980-1980

publication Dokter, H.J., H. Gosselink, H. de
 la Hayze
 The exchange of letters between
 specialist and general practitioner
 on the subject of their cancer
 patients, 1980 (report)

abstract_____

The starting-point is the hypothesis that communications in the GP-specialist relationship are insufficient in the case of people who suffer

from cancer. This hypothesis is tested by means of an intervention which is performed for the purpose of improving communications, whereupon communications are once more examined for the way in which they are being conducted now and for any visible improvements that may have occurred.

=====GENERAL PRACTITIONERS COLLABORATION WITH OTHERS

title The general practitioner - midwife
 relationship today and in former
 times

investigator J.J. Klinkert, Vrije Universiteit
 Amsterdam, Vakgroep Algemene Socio-
 logie, Amsterdam

duration 1977-1979

publication Klinkert, J.J.
 Midwives and physicians: past and
 present of a few professions in
 health care, 1980 (Thesis)

abstract_____

A study of the achievement and maintenance of
professional autonomy.

===== HOME CARE

title The Amsterdam Follow-up Service
investigator M.H.J.M. Knapen, J.M. Hutjes,
 Instituut voor Toegepaste Sociolo-
 gie, Nijmegen
duration 1971-1973
publication Knapen, M.H.J.M., J.M. Hutjes,
 The Amsterdam Follow-up Service,
 1973 (report)

abstract_____

Through contrasting developments in the need for help and the help that is actually given, an attempt is made to obtain a systematic evaluation of the organization and procedures of this Service which aims at conducting to the most appropriate kind of care for patients recently dismissed from hospital, in particular as far as the social-medical outcome of this is concerned.

===== PRIMARY-SECONDARY CARE RELATIONSHIP

title The Outpatient Departments' Outpost
 of the University Hospital
 associated with Amsterdam
 University situated in Ganzenhoef
 district, as an outlying ambulatory
 clinic, and its relation to other
 models of integration in primary
 and secondary care; an analysis of
 evaluation with reference to the
 situation in the south-east corner
 of Amsterdam conurbation
investigator L.J.G. v.d. Maesen, R.S.M. Helsloot
 Studiegroep Intra- en Extramurale
 Verhoudingen, Amsterdam
duration 1980-1982
publication Maesen, L.J.G. van de, R.S.M. Hel-
 sloot

The Outpatient Departments' Outpost of the University Hospital associated with Amsterdam University situated in Ganzenhoef district, as an outlying ambulatory clinic, and its relation to other models of integration in primary and secondary care; an analysis of evaluation with reference to the situation in the south-east corner of Amsterdam conurbation, 1981 (report)

abstract

No further information available.

=====REFERRALS

title	A study of the referral process with reference to the best possible health care performance
investigator	R. de Melker, H. Jacobs, F. Touw-Otten, Universitair Huisartsen Instituut, Utrecht
duration	1979 - on its way
publication	Melker, R.A. de A pilot-study of the referral habits of a group of general practitioners, Huisarts en Wetenschap 17 (1974) 8 pp. 289-294

abstract

The essence of the referral process in terms of quality. Referrals to the medical specialist.

=====CONSULTATION

title Consultation registration according to Kaplan together with the child department of the Social-Educational Service in the province of South Holland

investigator J.D. Mulder, B. de Beer, Gezondheidscentrum Wantveld, Noordwijk aan Zee.

duration 1971-1976

publication Ceased without publication

abstract-----
Through the recording on intake of a large number of data, consultations on the initiative of the Medical Educational Bureau and those that originate with general practitioners can be compared.

=====GENERAL PRACTITIONER SPECIALIST CONSULTATION

title Consultations with gynecologists

investigator J.D. Mulder, Rijksuniversiteit Leiden, Vakgroep Huisartsgeneeskunde Leiden

duration 1973-1981

publication Partial report in: Boerhaave cursusboek, November 1980

abstract-----
Can systematic consultation obviate referrals or else make them better-aimed? Can regular consultations improve obstetric care?

=====GENERAL PRACTITIONER SPECIALIST CONSULTATION

title Consultation in primary care
investigator J.D. Mulder, Rijksuniversiteit
Leiden, Vakgroep Huisartsgenees-
kunde, Leiden
duration 1975-1980
publication 1. Annual reports 1975-1980
2. Partial report in Boerhaave
cursusboek 1980

abstract-----
Consultation with - gynecologist
- psychiatrist
- pediatrician.
Can systematic consultation obviate referrals or else
make them better-aimed?

=====CHRONIC PATIENTS

title Extra mural care for diabetes
mellitus patients in Groningen
investigator P. Muntendam, Ziekenfondsraad
Amstelveen
duration 1977-1980
publication Ceased without publication

abstract-----
A study to ascertain in how far diabetes follow-up
care can prevent admissions. This project serves as
a comparison project to the existing diabetes follow-
up service in Limburg.

===== HOME CARE

title Admission to hospital on social grounds

investigator B.C.A. Nicolas, Soest

duration 1980 - on its way

publication Thesis forthcoming (1984)

abstract-----

What reasons are adduced for a decision that admission is indicated on social grounds? Which resources (both personal and material) ought to be available in primary care in order to avoid the necessity of such admissions?

===== PATIENT GUIDANCE

title The efficiency of the outpatient departments in Friesland

investigator W.J.F.T. Nuyens, Katholieke Hogeschool Instituut voor Gezondheidszorg, Tilburg

duration 1978-1981

publication Nuyens, W.J.F.T.
The efficiency of the outpatient departments in Friesland, 1980.
(report)

abstract-----

A study of how an outpatient department is inter-related with primary or, as the case may be, tertiary care.

=====REFERRALS

title The influence a general practitioner
 has on the referral rate

investigator J.S.Z. Pel, Middelburg

duration 1973-1976

publication Pel, J.Z.S.
 On the influence the general
 practitioner has on referral rate,
 Medisch Contact 30 (1975) pp. 988-
 990

abstract-----
Does a joint and critical examination of every
referral influence the Referral Rate?

=====HEALTH CARE

title The attitudes of medical specialists

investigator J. Persoon, Instituut voor Sociale
 Geneeskunde, Nijmegen

duration 1972-1974

publication Lectures

abstract-----
The attitudes and oponions of three categories of
specialists in respect of health care and general
practitioners.

=====COLLABORATION

title District nurse and Collective
 Mental Health Care

investigator W.C.M. Scheffer, Instituut voor
 Toegepaste Sociologie, Nijmegen

duration 1974-1976

publication Scheffer, W.C.M.
 District nurse and Collective
 Mental Health Care, 1975 (report)

abstract-----
The report of preliminary study for an experiment in
collaboration.

=====OBSTETRICS

title Evaluation of an obstetric centre

investigator P.B. Schuil, Instituut voor Sociale
 Geneeskunde, Nijmegen

duration 1974-1976

publication Schuil, P.B.
 The client in obstetric care,
 studied among clients of the
 obstetric centre for Enschede and
 environs, 1975 (Thesis)
 Englisch summary available

abstract-----
An inquiry into a number of differences between births
that took place at home, in hospital or in the
obstetric centre at Enschede.

=====TERMINAL CARE

title The site of dying cancer patients
investigator J. Stam, Gezondheidscentrum Helmer-
 straat, Amsterdam
duration 1979-1980
publication Stam, J.
 Home care for dying cancer patients
 Huisarts en Wetenschap 23 (1980)
 pp. 435-438

abstract-----
The incurable cancer patient who is about to die
either dies at home, in hospital or in the nursing
home. What elements come into play in this decision?

=====OBSTETRICS

title Comparative study of the histories
 of births at home and in hospital
 that take place after normal
 pregnancies
investigator J.F.M. Thomassen, F.L. van Duyn,
 H.O. Sigling, Huisartsen Instituut
 der Vrije Universiteit van Amster-
 dam, Amstelveen
duration 1978-1981
publication Thomassen, J.F.M., F.L. van Duyn,
 H.O. Sigling
 Birth, a natural event
 part I: Medisch Contact 34 (1979)
 44, pp. 1411-1414
 part II: Medisch Contact 34 (1979)
 45, pp. 1440-1444

abstract-----

Do complications occur as often (or rarely) when the birth takes place at home as when it takes place in hospital, or is there any evidence that home births more often proceed without complications?

===== HOME CARE

title 'Follow-up care', commentaries by patients of the general practice who were recently dismissed from hospital

investigators C.A. Vermeulen, Ministerie W.V.C. Leidschendam

duration 1971-1973

publication Vermeulen, C.A. Morbidity in the Hoensbroek-Noord Health Care, 1973 (report)

abstract _____
Inventory of the needs for follow-up care among patients who have been dismissed from hospital.

=====HEALTH CARE

title Evaluation of health care in
Amsterdam-Noord

investigator A.Ph. Visser, Vrije Universiteit
van Amsterdam, Vakgroep Sociale
Psychologie, Amsterdam

duration 1976-1980

publication Visser, A.Ph.
1. Health care in Amsterdam-Noord
Medisch Contact 34 (1979) pp.
684-687
2. Health services in an urban
district, Tijdschrift voor so-
ciale Geneeskunde 57 (1979) pp.
182-189.

abstract-----
Factors determining the various aspects of health care
(general practitioner, hospital, specialists, district
nurse, etc.).

=====REFERRALS

title Differences in referral patterns of
Philips general practitioners and
other general practitioners

investigator A. Voorwaarden, Philips Medische
Dienst, Eindhoven

duration 1975-1976

publication Voorwaarden, A.
Differences in refferal patterns,
1976 (report)

abstract-----
Does the availability of internal facilities in the
Philips health care centre result in a divergent
pattern of referrals to external specialists?

===== PRIMARY-SECONDARY CARE RELATIONSHIP

title Lelystad hospital
investigator D. Wijkel, J.P. Dopheide, Nederlands Huisartsen Instituut, Utrecht
duration 1980 - on its way
publication Forthcoming (1985)

abstract-----

What is the effect of the opening of a hospital in a hitherto 'hospital-less' area on the aggregate medical consumption?

===== REFERRALS

title Referring in the general practice at macro-, meso- and micro-level
investigator J. van der Zee, B.H. Posthuma, Nederlands Huisartsen Instituut Utrecht
duration 1974-1979
Publication Zee, J. van der B.H. Posthuma
1. Between the first and secondary echelon, parts I and II, 1977, 1978 (reports)
2. Referral rates and the reduction in size of the general practice Gezondheid en Samenleving (1980) pp. 59-68

abstract-----

To acquire an understanding of the factors determining the variation in referring through the

development of an instrument to measure referring behaviour, the development of a typology of referring behaviour and experiments with a few of these factors for the purpose of influencing the referring behaviour.

=====GENERAL PRACTITIONER-SPECIALIST COLLABORATION

title Collaboration of general practitioner and specialist on the occasion of specific disease syndromes

investigator J. van der Zee, C.P. Bruins

duration 1972-1973

publication ceased without publication

abstract-----
An inquiry, by means of interviews and questionnaires, into the mutual relations of patient, general practitioner and specialist and the nature of the communication failures that occur. An inquiry into the way to improve such relations.

c. primary-basic care relation

=====GENERAL PRACTITIONERS COLLABORATION WITH OTHERS

title The line taken by medical officers in warranting the use of diagnostic aids by the general practitioner

investigator J.M. Blom, J. van der Zee, Nederlands Huisartsen Instituut, Utrecht

duration 1973-1973

publication Blom, J.M., J. van der Zee
Diagnostic aids: opinions held by Health Fund medical officers on the use of diagnostic aids by the general practitioner, 1974 (report)

abstract-----

An inquiry into the extent to which there are obstacles to the general practitioner in his use of aids and the extent to which medical officers act inconsistently in this respect.

=====COLLABORATION

title Development project for the co-operation of social work and the Collective Medical Service

investigator J.J. Schermer, C.J.P. Steyger, J.H. Biewenga, Gemeenschappelijke Medische Dienst, Amsterdam

duration 1974-1976

publication Schermer, J.J., C.J.P. Steyger, J.H. Biewenga
Development project for the co-operation of social work and the Collective Medical Service, 1976 (report)

abstract-----

How can social work co-operate in supplementing the work of the Collective Medical Service for the purpose of the optimum functioning of disabled persons and

how can such a contribution be effectively organized?

=====SOCIAL MEDICINE

title An evaluative study of the position
 of social medicine in primary care

investigator M. Schulten-Lucassen, Gezondheids-
 centrum Ommoord, Rotterdam

duration 1972-1973

publication no publication available

abstract-----
No further information available.

d. primary care – self-help relation

=====SELF-HELP

title Project for mamma examination by
 the patient

investigator F.M.B. Braams, gezondheidscentrum
 Ommoord, Rotterdam

duration 1978-1980

publication Ceased without publication

abstract-----
Patients of the health centre are instructed by the
district nurse in selfexamination of the mamma.

=====HEALTH INSURANCE

title Strengthening the democracy in
 health care; Health Fund insured

investigator P. van Daalen, M. Bertels, Rijks-
 universiteit Leiden, Sociologisch
 Instituut Leiden

duration 1976-1981

publication Daalen, P. van, C. Maas, L. Wichman
 The insured in the Health Funds:
 report of a preliminary
 investigation, July 1981 (report)

abstract-----
On the one hand an inquiry into the possibility of
a degree of popular participation in (parts of)
health care and into the extent to which partici-
pation is felt as such. On the other, giving what-
ever research support is possible to popular
participation in primary health care.

=====SELF-HELP

title Self-help
investigator P. van Harberden, Katholieke Hogeschool, Tilburg
duration 1977-1981
publication Harberden, P. van, A. van der Avort
Spotlighting the means used by self-help groups; a preliminary to theory-building

abstract-----
The method of social assistance by Alcoholics Anonymous.
Spotlighting the means used by self-help groups; an initiative towards theory-building, 1981 (report).

=====SELF-HELP

title Self-help in the Netherlands
investigator P. van Harberden, R. Lafaille, Katholieke Hogeschool, Tilburg
duration 1977-1980
publication Jansen, H., R. Lafaille, P. van Harberden, L. Postma:
Self-help groups in the Netherlands, 1980 (report)
Harberden, P. van, R. Lafaille:
Self-help, a new form of social assistance, 1978 (book)

abstract-----
Societal backgrounds to the phenomenon of 'self-help' and the self-help groups in particular.

===== SELF-HELP

title Inventory of self-help techniques
investigator R. Lafaille, Katholieke Hogeschool,
 Tilburg
duration 1980-1981
publication Lafaille, R.
 Self-help techniques; what an
 individual can do about his
 physical and mental well-being,
 1980 (book)
 Self-help, a new perspective in
 health care, Huisarts Nu 10 (1981)
 9, pp. 299-304

abstract_____

What an individual on his own can do about his
physical and mental well-being.

===== SELF-HELP

title Bibliography of self-help techniques
investigator R. Lafaille, Katholieke Hogeschool,
 Tilburg
duration 1979-1980
publication Lafaille, R., L. Postma
 Bibliography on self-help
 techniques, 1980

abstract_____

Bibliography compiled after inventorizing self-help
techniques.

=====PATIENTS' PARTICIPATION

title Stimulating the communication
between patient and primary care
workers: Health Guidance and
Education

investigator P.D. Kerkhof, E. Ebbens, M. Dirven,
Rijksuniversiteit Limburg, Capaci-
teitsgroep Huisartsgeneeskunde,
Maastricht

duration 1979 - on its way

publication Ebbens, E.
A patients' association in the
Hoensbroek health centre, Huisarts
en Wetenschap 7, July 1980, pp.264ff

abstract_____

What are the structure and function of the Hoensbroek-
Noord patients' association at Hoensbroek? What
attempts does it make to realize its objects and in
how far does it succeed?

=====SELF-HELP

title Determinant factors in self-help and
neighbourhood mutual assistance

investigator G.W.M. Stevens, Erasmus Universiteit,
Sociale subfaculteit, Rotterdam

duration 1978-1980

publication Caesed without publication

abstract_____

1. An inquiry into the factors influencing behaviour
related to health complaints (specially in self-
help and mutual assistance).
2. The contribution of professional primary health
care (with particular regard to contrasting single-
handed practitioners with multidisciplinary
collaboration groups).

===== SELF-HELP

title Self-help and other possibilities of reform among groups with socially defined problems

investigator G. de Zeeuw, M. Bakker, M.D. Karel, Instituut Wetenschap der Andragogie (IWA) Amsterdam

duration 1980 - on its way

publication Bakker, M. and M. Karel: Self-help and social welfare, the experiences professional workers have of self-guided groups, 1979 (book)

abstract-----
An attempt to find the rules used in self-help groups and to establish the rules governing the relation of professional welfare work to such groups.

II
Research in or into primary care as health
service system

a. general

=====COLLABORATION

title Primary care co-operation in the province of Groningen

investigator E. van Beilen, W. Brinks, A. Vonk, Samenwerkingsplatform, Groningen

duration 1979 - on its way

publication Beilen, E. van, W. Brinks, A. Vonk Primary care co-operation in the province of Groningen, 1980 (report)

abstract-----

What is being done in the way of collaboration by primary care services? Is there a need for co-operation among primary care workers? What ought the form and contents of such co-operation to be like? What factors hinder or prevent collaboration? What factors promote collaboration? What needs for consultation among primary care workers are there in respect of co-operative relations?

=====PATIENTS' PARTICIPATION

title Towards neighbourhood-centred patient care. Action and evaluation research of the involvement of residents in social-medical services in Holendrecht

investigator M.T. Bertels, Stichting Sociale en Medische dienstverlening, Amsterdam

duration 1979 - on its way

publication Bertels, M.T.
 1. Towards neighbourhood-centred patient care; action and evaluation research of the social-medical services in Holendrecht, Provisional evaluative report, 1980;
 2. A study of the possibility of involving residents in the

social-medical services in Holen-
drecht, Provisional report, 1981

abstract

No further information available.

=====COLLABORATION

title A study of the desires and re-
 quirements in respect of health
 care among the population and groups
 of health care workers in a fast-
 growing municipality (Zoetermeer)

investigator R.S. ten Cate, C.W. Aakster, K.E.
 Huizer-Büchli, M.J. Dalhuizen,
 Rijksuniversiteit Leiden, Vakgroep
 Huisartsgeneeskunde, Leiden

duration 1972-1976

publication Student's paper

abstract

Mainly the needs for various forms of collaboration
(such as group practices, co-operation of GPs/
district nurses/social workers) have been considered,
while possible ways to provide for such needs have
also been examined.

=====HEALTH CARE, STRUCTURE AND FUNCTIONING

title Regionalization in health care: the repercussions in primary care

investigator H.J. Dokter, Instituut voor Huis-artsgeneeskunde, Rotterdam

duration 1977-1980

publication Dokter, H.J., E.P. Aker, L. Naaborg
Watching the neighbourhood, Medisch Contact 33 (1978) pp. 1347-1350

abstract-----
An inventory and operationalizing of the concepts of accessibility, continuity and coherence.

=====PSYCHO-SOCIAL PATIENT CARE

title Seeking more suitable forms of psycho-social assistance in primary care

investigator A.W.M. Elbers, Instituut voor Orthopedagogiek, Nijmegen

duration 1975-1978

publication Ceased without publication

abstract-----
An inquiry into the needs of those seeking and giving professional help. The obtaining of hard facts concerning the presuppositions on which the experiment was based. Evaluating a new form of patient care and the co-operation with other patient care agencies working in primary care.

===== PATIENT

title The ways in which patients are
 discussed in mono- and multidisci-
 plinary groups operating in the
 district of the peripheral clinic of
 the Leiden Institute of General
 Medicine

investigator H. de Graaf, R.S. ten Cate, J.D.
 Mulder, Rijksuniversiteit Leiden,
 Vakgroep Huisartsgeneeskunde, Leiden

duration 1979-1981

publication Graaf, H.G., R.S. ten Cate, J.D.
 Mulder
 Methods of discussing patients used
 by general practitioners working in
 mono-disciplinary groups, 1981
 (report)

abstract-----
A study of the procedures used to discuss patients.

=====PRIMARY CARE

title An outline of the front line
investigator T. Hak, P. Beek, Erasmus Universi-
 teit, afd. Preventieve en Sociale
 Psychiatrie, Rotterdam
duration 1973-1973
publication Hak, T., P. Beek
 An outline of the front line, 1973
 (report)

abstract-----

A literature search on the following subjects:

1. Can any system be detected in the literature on the reorganization of primary health and welfare care?
2. Definition of a few concepts
3. Analysis trends in practice
4. Description of a few models of district centres

=====HEALTH CARE, POLICY MAKING

title Health care in the perspective of
 policy-making: Provisional
 Memorandum on primary health care
investigator W. van Hest, Gemeente Helmond,
 G.G. en G.D., Helmond
duration 1980 - on its way
publication No publication available

abstract-----

Drawing up an inventory of all primary health care facilities in Helmond, locating tight corners, making recommendations

===== PRIMARY CARE

title Analysis of the objectives of
 primary health care in Rotterdam

investigator G.A. de Jong, Erasmus Universiteit,
 Instituut voor Maatschappelijke
 Gezondheidszorg, Rotterdam

duration 1976-1977

publication No publication available

abstract-----
An explicit formulation of the objectives of the
general practitioners, social workers, district
nurses, midwives, physiotherapists, and doctor's
assistants who work in Rotterdam.

===== HEALTH GUIDANCE AND EDUCATION

title Cancer information to practitioners
 in primary care

investigator R. Jonkers, A. van Voorstvader,
 Studiecentrum Sociale Oncologie,
 Rotterdam

duration 1979-1981

publication no publication available

abstract-----
Practitioners in primary care can have an important
role in cancer guidance for patients. For that reason
it is necessary to investigate what attitude they
take in respect of cancer and what knowledge they
have of it. On the basis of the investigation results
adaptation of their knowledge and ultimately
behaviour is pursued.

=====COLLABORATION

title Integrated services project

investigator G.H. van 't Klooster, Bureau Integrale Dienstverlening, Den Haag

duration 1975-1980

publication Klooster, G.H. van 't
Grim winter is past: what now with integrated services? De Eerstelij 5/6 (1978) pp. 155-161
1. Evaluative memorandum on the integrated services project, 1977 (report)
2. The integrated services project reconsidered: report on the response to the evaluative memorandum. (1) Conclusions and recommendations, 1978 (report)

abstract_____

1. Research into the factors that stimulate or hinder collaboration in primary care services
2. Supervision of collaboration projects.

=====CLASSIFICATION

title The design of a multidisciplinary classification list

investigator H. Lamberts, Gezondheidscentrum Ommoord, Rotterdam

duration 1976-1977

publication Eighth WONCA congress: a report on the petty business, Huisarts en Wetenschap 21 (1978) 7, pp. 267-269

abstract_____

Communication about illness and problem behaviour between practitioners of various professions.

===== CONTRACEPTION

title Evaluation of the primary care
courses of birth control

investigator J.P. Moors, Nederlands Huisartsen
Genootschap, Utrecht

duration 1977-1978

publication Moors, J.P.C.
A postgraduate course for general
practitioners: How to manage sexual
problems, 1978 (report)

1. When sexual relations are
problematic, Huisarts en Weten-
schap 23 (1980) 5 (May) pp. 180-
186
2. Kontrazeptionsberatung durch den
Hausartz (I), Der Praktische
Arzt 18 (1981) 34 (1 Dec.)
pp. 3946-3954

abstract-----
What conditions make for success with a course
designed like the present one?
Is there anything to suggest that interdisciplinary
co-operation is stimulated?

=====HEALTH CARE, STRUCTURE AND FUNCTIONING

title Provincial authorities in extramural health care

investigator C.L. Moser-Peters, P.L. Stroink, Nederlands Instituut voor Praeventieve Gezondheidszorg, Leiden

duration 1971-1973

publication Moser-Peters, C.L., P.L. Stroink Provincial authorities in extramural health care, 1973 (report)

abstract-----

With the help of a questionnaire, background data have been collected among individual members of provincial governments for the purpose of evaluating the effectiveness of their organization within the whole of health care.

=====COLLABORATION

title Professional communication structure

investigator J. Persoon, P. Heydendaal, M. Slaghekke, Instituut voor Sociale Geneeskunde, Nijmegen

duration 1972-1979

publication No publications available

abstract-----

An investigation of the knowledge and expectations which general practitioners, district nurses and social workers have of each other.

=====COLLABORATION

title An inventory of types of co-
 operation in primary care

investigator Provinciale Raad voor de Volksge-
 zondheid in Brabant, Den Bosch

duration 1974-1976

publication Discussion paper

abstract-----
Questionnaire/opinion poll on the occasion of the
publication of a memorandum by the Provincial Public
Health Board.

=====COLLABORATION

title Neighbourhood-centred collaboration
 in primary health care

investigator H. de Sain, Stedelijke Stichting
 Welzijnsbevordering, Utrecht

duration 1979-1981

publication H. de Sain
 Part A: Experiences primary care
 workers have with neighbour-
 hood-centred collaboration
 Part B: Developments, impediments,
 recommendations
 Part C: Inventory
 Part D: Rationale and theory,
 October 1980 (report)

abstract-----
What collaboration arrangements (i.e., neighbourhood-
centred and in primary care) do exist in Utrecht-

city? For neighbourhood-centred collaboration to be achieved, what kind of experiences and impediments do we find? Can policy recommendations be made for the purpose of better conditions?

=====PRIMARY CARE

title Measuring the volume of primary
 health care in the Rijnmond region

investigator H. Sanders-Glasbergen, H. Lamberts,
 Gezondheidscentrum Ommoord, Rotter-
 dam

duration 1976-1978

publication Lamberts, H., H.G. Sanders-Glas-
 bergen
 The volume of primary health care in
 the Rijnmond region, Huisarts en
 Wetenschap 20 (1977) pp. 387-395

abstract _____
No further information available

===== COLLABORATION

title Collaboration in health care given
at home in the province of Utrecht

investigator S. Santema, E. Gerrits, Provinciale
Raad voor de Volksgezondheid van de
provincie Utrecht, Utrecht

duration 1974-1976

publication Santema, S., E. Gerrits
Collaboration in health care given
at home, 1976 (report)

abstract-----

An inventory undertaken to come to a survey of the
collaboration arrangements between general prac-
titioners, district nurses, social workers,
physiotherapists and midwives operating in the
province of Utrecht.

===== PSYCHO-SOCIAL PROBLEMS

title Relational problems between partners

investigator M. Terstegge, Nederlands Instituut
voor Sociaal Sexuologisch Onder-
zoek, Zeist

duration 1979-1982

publication Terstegge, Marlies: An inventory of
research on relations and sexuality,
1979 (report)

abstract-----

Problems between partners which are presented in
primary care work. The possibilities of early
tracing.

=====PRIMARY CARE

title The adequacy of primary health care
investigator M. Trommel, Instituut voor Huisarts-
 geneeskunde, Rotterdam
duration 1974-1976
publication Ceased without publication
abstract _____
Action research of multidisciplinary group practices.

=====PRIMARY CARE

title A study of collaboration in primary
 care
investigator A.J. Verhoeven, Samenwerkingspro-
 ject 1e lijn (S-1) - NHI -NK -
 Joint, Bunnik
duration 1976-1978
publication Verhoeven, A.J.
 1. Report on the initial stages of
 two health centres; Den Bosch,
 Primary care collaboration
 project, 1977;
 2. Co-operation between general
 practitioner and social worker
 in Weert;
 3. Client and professional helper
 in a collaboration situation,
 1978 (reports)

abstract-----
The systematic collection of field experiences with primary care collaboration.

=====COLLABORATION

title Administrative integration in respect of primary health care
investigator K. Visser, Landbouw Hogeschool Vak-groep Industriële Bedrijfskunde, Wageningen
duration 1977 - unknown
publication Visser, K.
Collaboration in primary health care 1977 (report)

abstract-----
Supporting the creation of collaboration arrangements through the development of a model.

=====PRIMARY CARE

title A study of the infrastructure of primary health care
investigator A. Vrij, C.P. Breemer ter Steege, Geneeskundige Hoofdinspectie Ministerie WVC, Leidschendam
duration 1977-1980
publication Breemer ter Steege, C.P.C., A. Vrij, Supporting primary health care, 1979 (report). Strengthening by support elements, Medisch Contact 26 (1980) pp. 793-797

abstract-----
A study undertaken to gain insight in the existing infrastructure of primary health care, trace gaps and overlaps, examine the possibilities of integration in the supporting sector. Building a model of integrated primary health care.

=====COLLABORATION

title Neighbourhood-centred co-operation
 in primary care

investigator W. Zwanikken, F. Christis, C. v.d.
 Kolk, Werkgroep Gezondheidszorg,
 IKPP Utrecht

duration 1976-1977

publication Neighbourhood-centred co-operation
 in primary care (brochure)

abstract

An inventory of collaboration arrangements in and impediments to collaboration in primary care in Utrecht. Passing on information about impediments to such organizations as can contribute to their removal. Providing information and, if possible, suggestions to workers in neighbourhoods. Supplying material for project meetings, training and courses.

b. health centres and other multidisciplinary col-
laboration

=====COLLABORATION

title Zoetermeer Health Centre
investigator C.W. Aakster, Rijksuniversiteit Leiden, Instituut voor Sociale Geneeskunde, Leiden
duration 1976-1978
publication No publication available

abstract-----
The achievement of team-work promotion by means of process consultation and/or evaluation.

=====COLLABORATION

title An investigation of the effectiveness of three health centres and a population survey in the Ommoord and Hoensbroek health centres
investigator J.P.J. Bastiaenen, J. Holten-Vriesema, Stichting Itoba, Aalsmeer
duration 1973-1976
publication Bastiaenen, J.P.J., F.T. de Boorn-van Duin, G. Goudriaan
Design and function of a number of health centres, 1976 (report)

abstract-----
An attempt to relieve the problems in five health centres through population surveys and research.

=====COLLABORATION

title The expectations and experiences
 of patients in respect of a group
 general practice

investigator J. Bouma, Tj. Tijmstra, Rijksuni-
 versiteit Groningen, Vakgroep Me-
 dische Sociologie, Groningen

duration 1974-1977

publication Bouma, J., Tj. Tijmstra
 Anticipation and appreciation of a
 group general practice,
 Huisarts en Wetenschap 20 (1977)
 pp. 131-135

abstract-----
No further information

=====COLLABORATION

title An inventory and description of
 group practices and health centres
 in the Netherlands

investigator R.S. ten Cate, Rijksuniversiteit
 Leiden, Vakgroep Huisartsgenees-
 kunde, Leiden

duration 1972-1977

publication Cate, R.S. ten
 Giving help in co-operation, 1979
 (book);
 Working together, building together
 in primary health care, 1977 (book)

abstract-----
A study for the preparation of a generally accessible
publication on the subject.

=====COLLABORATION

title Working together, building together
in primary health care

investigator R.S. ten Cate, Rijksuniversiteit
Leiden, Vakgroep Huisartsgenees-
kunde, Leiden

duration 1973-1977

publication Cate, R.S. ten
Working together building together
in primary health care, 1977 (book)

abstract_____

A study of the activities of seventy group practices
and health centres in the Netherlands.

=====COLLABORATION

title A study of the annual reports of the
collaborating entities grant-aided
under the provisional promotion
scheme for district health centres

investigator R.S. ten Cate, C.P.H. van Dijke,
Rijksuniversiteit Leiden, Vakgroep
Huisartsgeneeskunde, Leiden

duration 1977 - on its way

publication Cate, R.S. ten, C.P.H. van Dijke,
Findings among collaborating
entities and health centres which
applied to the promotion scheme for
district health centres in 1978,
1980 (report)

abstract_____

The classification of data, an attempt to find any
connections that may exist between quantity and

quality of the co-operation in primary care, and its relations to secondary or tertiary care.

=====COLLABORATION

title An investigation centring around a health centre

investigator H.F.J.M. Crebolder, Gezondheidscentrum Withuis, Venlo

duration 1972-1977

publications Crebolder, H.F.J.M.

1. Investigations around a health centre; clients, figures, observations, 1977 (thesis);
2. Investigations around the Wit-huis Health Centre (II): attention to the patient in the assessment of a health centre, Huisarts en Wetenschap 18 (1975) pp. 40-42;
3. Investigations around the Wit-huis Health Centre (III): which

- practitioner is chosen for which problem by the patient of the Withuis? Huisarts en Wetenschap 18 (1975) pp. 73-76;
4. Investigations around the Withuis Health Centre (VII): the views of the client on his doctor, Huisarts en Wetenschap 20 (1977) pp. 178-188;
 5. Investigations around the Withuis Health Centre (X): some aspects of the organization and procedures of the health centre commented upon by its clients, Huisarts en Wetenschap 20 (1977) pp. 301-305;
 6. A health centre offers advantages over a general practice, MGZ 6 (1978) 5 pp. 38-39
The general practitioner in a team: the patients of a health centre give their commentaries, Intermediair 14 (1978) 35 pp. 9-13

abstract

An attempt at evaluation upon the transition from a single-handed practice, from the point of view of patients and others.

===== PROFESSIONAL HELPER-PATIENT RELATIONSHIP

title Changing your doctor
investigator J.P. Dopheide, J. van der Zee, J.
Bazelmans, Nederlands Instituut voor
Preventieve Gezondheidszorg, Leiden
duration 1971-1973
publication Bazelmans, J.G.
Changing your doctor, 1973 (report)

abstract-----
Finding predictors of patients' decisions to change
their doctor in fulfillment of a request made of
their patients by two physicians upon engaging a
third member of the team.

===== COLLABORATION

title The health centre
investigator C.T. Feldman, Nederlands Huisartsen
Instituut, Utrecht
duration 1973-1975
publication Feldman, C.T.
Literature search on health centres;
health centres in the United States,
1974 (report)

abstract-----
A study of recently published (mainly foreign)
literature on multidisciplinary collaboration in
primary care.

=====COLLABORATION

title Teams of social workers, district
 nurses, physicians, etc.

investigator H. de Graaf, Nederlands Instituut
 voor Maatschappelijk Werk Onder-
 zoek, Den Haag

duration 1974-1976

publication Graaf, H. de
 Harmony in primary care? Co-
 operation towards co-operation,
 1975 (report)

abstract-----

What are the intervening factors for multidisci-
plinary teams of general practitioners, social
workers, district nurses and other workers in
primary care?

=====COLLABORATION

title Group development analysis of a
 multidisciplinary team in primary
 health care

investigator F.J. Grauenkamp, Katholieke Hoge-
 school, Vakgroep Psychologie en
 Psychotherapie, Tilburg

duration 1979 - on its way

publication Forthcoming (1983)

abstract-----

This team has been studied to the following ends:
1. for an historical record of the project itself;
2. for the formulation of guidelines for the benefit
 of similar collaborating entities.

=====COLLABORATION

title The realization of Voorschoten
 Health Centre

investigator W.B. de Greve, Instituut voor So-
 ciale Geneeskunde, Leiden

duration 1976-1981

publication No publication available

abstract-----
The formation of a work team of general practitioners,
social workers and district nurses.

=====COLLABORATION

title An evaluation of the views held of
 the health centre

investigator H.W.W. Hogenzeil, M. Remmen, Rijks-
 universiteit Groningen, Vakgroep
 Medische Sociologie

duration 1974-1976

publication Remmen, M.
 An evaluation of the views held of
 the health centre, 1976

abstract-----
An evaluation of the comments made by various
agencies on several aspects of the health centre.

=====COLLABORATION

title Co-operation of the district nurse
with other practitioners

investigator J. Holten-Vrieseema, E. Tellegen,
Instituut der Wetenschap der
Andragogie, Amsterdam

duration 1974-1976

publication Holten-Vrieseema, J., E. Tellegen
Co-operation district nurse and
other practitioners, 1976 (report)

abstract-----
No further information available.

=====COLLABORATION

title Follow-up on the opinion of
patients of the Nijmegen pseudo-
group practice

investigator F. Huygen, P. Heydendaal, J.
Persoon, Nijmeegs Universitair
Huisartsen Instituut, Nijmegen

duration 1974-1977

publication Huygen, F., P. Heydendaal, J.
Persoon
1. Various conclusions of patients,
Huisarts en Wetenschap 17 (1974)
pp. 23, 67, 99, 69, 245, 330.
2. Investigations around a pseudo-
group practice, preference for
the usual doctor, answers to
open-ended questions, Huisarts
en Wetenschap 18 (1975) pp. 155-

158;

3. Investigations around a pseudo-group practice, Huisarts en Wetenschap 19 (1976) pp. 297-301

abstract

It was examined whether and in how far the opinion of patients on the group practice had changed over the years (from 1972 onwards)

=====COLLABORATION

title Evaluation of a multidisciplinary team working in primary health care

investigator G.A. de Jong, Erasmusuniversiteit
Instituut voor Maatschappelijke
Gezondheidszorg, Rotterdam

duration 1976-1976

publication No publication available

abstract

Process evaluation of the collaboration project; formative evaluation of project organization and development; summative evaluation of project effectivity.

=====COLLABORATION

title A study of the effectivity of
 (district) health centres

investigator G.A. de Jong, H.J. Kruidenier,
 Ziekenfondsraad, Amstelveen

duration 1977-1978

publication Kruidenier, H.J.
 Referral rates of eight health
 centres, 1979 (report)

abstract-----

A study of the objectives and effectivity of collaboration arrangements, in order to obtain some evidence to be used in laying down norms for financing. The study is divided in two:

1. quantitative - practive organization of general practitioners
2. qualitative - analysis of objectives

=====COLLABORATION

title Transaction research of primary
 care

investigator H. Lamberts, gezondheidscentrum
 Ommoord, Rotterdam

duration 1976-1977

publication Lamberts, H.
 Transaction research of primary care,
 Huisarts en Wetenschap, 20 (1977)
 pp. 91-97

abstract-----

No further information available.

=====PROFESSIONAL HELPER-PATIENT RELATIONSHIP

title 'Oh, doctor, I'm so glad'
investigator L.J. Menges, E. Boon-Derksen, Rijks-
universiteit Leiden, Vakgroep Kli-
nische Psychologie, Leiden
duration 1974-1976
publication Boon-Derksen, E.
'Oh, doctor, I'm so glad'; an
inquiry into the opinion of 528
patients on the group practice of
Wassenaar Health Centre, 1974
(report)

abstract_____

An examination by means of questionnaires and
interviews on the reactions of patients upon the
transition from a singlehanded practice to a group
practice.

=====COLLABORATION

title Evaluation of the effectivity of a
new collaboration arrangement
investigator H.C. Mulder, Tj. Tijmstra, Rijks-
universiteit Groningen, Vakgroep
Medische Sociologie, Groningen
duration 1973-1977
publication No publication available

abstract_____

Analysis of the group practice dealing with both the
group members and the patient population.

=====COLLABORATION

title Selection and decision processes
among new residents with regard to
the use of the health centre

investigator H.C. Mulder, Tj. Tijnstra, P.
Wagenaar, W. Weeder, Rijksuniversi-
teit Groningen, Vakgroep Medische
Sociologie, Groningen

duration 1973-1976

publication No publication available

abstract-----
An attempt at acquiring an understanding of what
people do when they take up residence in the new
Lewenborg estate and either register with the local
health centre or don't.

=====HOME-TEAM

title Report on the stimulating of 'home
teams' in the province of Friesland

investigator Provinciale Raad voor de Volksge-
zondheid in Friesland, Leeuwarden

duration 1972 - unknown

publication Annually commented upon in the
annual reports

abstract-----
A study of the way to stimulate the effectivity of
'home teams', the expediency of initiating the
creation of such teams and the development of
relations with group practices and health centres.

===== COLLABORATION

title Evaluation 1968-1975 of the Ommoord
Health Centre

investigator F.E. Riphagen, G.G. en G.D.,
Utrecht

duration 1975-1980

publication Riphagen, F.E.
Seven fat years, a descriptive
analysis of multidisciplinary
collaboration in Rotterdam-Ommoord,
1980 (thesis)

abstract-----
A critical analysis and evaluation of seven years
of multidisciplinary collaboration.

===== COLLABORATION

title Analysis of the history of the
Ommoord Health Centre

investigator F.E. Riphagen, G.G. en G.D.,
Utrecht

duration 1977-1980

publication Riphagen, F.E.
Seven fat years, a descriptive
analysis of multidisciplinary
collaboration in Rotterdam-Ommoord,
1980 (thesis)

abstract-----
No further information available.

=====COLLABORATION

title Obstacles encountered in the
 formation of group practices and
 health centres

investigator M. Siegenbeek van Heukelom-de Boer,
 C.W. Aakster, C.P. Bruins, Neder-
 lands Huisartsen Instituut, Utrecht

duration 1971-1973

publication Siegenbeek van Heukelom-de Boer,
 M., C.W. Aakster, C.P. Bruins
 1. The formation of group practices:
 report of an empirical in-
 vestigation of conditions that
 hinder or help the formation of
 group practices and health
 centres in the Netherlands, 1973
 2. Influences in the formation of
 group practices, 1972 (reports)

abstract-----
No further information.

=====COLLABORATION

title The 'Evaluation Helmersstraat
 Health Centre' project

investigator H.C. Schouwenburg, T.N.M. Postma,
 Instituut voor Huisartsgeneeskunde
 van de Universiteit van Amsterdam,
 Amsterdam

duration 1975-1980

publication No publication available

abstract-----
Small, self-contained studies intended to give an idea
of effects of the activities of the 'Helmersstraat'
Health Centre at Amsterdam.

=====COLLABORATION

title Co-operation of general practitioners
district nurses and social workers
in Nijmegen

investigator A.C.J. Staps, Radboud Ziekenhuis,
Medisch Psychologisch Instituut,
Nijmegen

duration 1976-1978

publication Staps, A.C.J.
Co-operation of general practition-
ers, district nurses and social
workers in Nijmegen, 1978 (report)

abstract-----
An inventory of the present forms of (both structural
and occasional) co-operation.

=====COLLABORATION

title Adequacy of primary health care:
single-handed practitioners versus
multidisciplinary teams

investigator G.W.M. Stevens, H.J. Dokter,
Erasmusuniversiteit, Sociale Fa-
culteit, Rotterdam

duration 1977-1979

publication No publication available

abstract-----
A comparison of single-handed and group practices for
their degree of adequacy from the point of view of
those seeking help.

=====COLLABORATION

title Health centres and town and country
planning

investigator M. Swinkels, W.G.W. Boerma, Neder-
lands Huisartsen Instituut, Utrecht

duration 1980-1981

publication Swinkels, M.
Health centres and town and country
planning: the influence of the line
taken by the local government, the
local association of general
practitioners and the Health Funds
on the creation of health centres,
1981

abstract-----

The influence of the line taken by the local
government, the local association of general
practitioners and the Health Funds when a health
centre is to be created.

=====COLLABORATION

title District health centres

investigator F. Touw-Otten, Universitair Huis-
artsen Instituut, Utrecht

duration 1972-1973

publication No publication available

abstract-----

A literature search intended to acquire an under-
standing of the working of district health centres.

=====COLLABORATION

title A study of the incidence of socio-
 psychic and somatic 'morbidity'
 characteristics in primary care

investigator C.A. Vermeulen, Ministerie van
 WVC, stafafdeling Epidemiologie
 en Informatica, Leidschendam

duration 1973-1976

publication Vermeulen, C.A.
 A study of the incidence of socio-
 psychic and somatic 'morbidity'
 characteristics in primary care,
 1976 (report)

abstract-----
An inventory of the patient population of primary
care as to socio-psychic and somatic dysfunctions.

=====PRACTICE ORGANIZATION

title A comparison of practice-analytical
 findings concerning single-handed
 practice management and the group
 practice

investigator C.A. Vermeulen, Ministerie WVC,
 Stafafdeling Epidemiologie en In-
 formatica, Leidschendam

duration 1969-1973

publication Vermeulen, C.A.
 Referring in the Hoensbroek-Noord
 Health Centre, 1973 (report)

abstract-----
Tracing changes in the practice organization of teams
and their effects on the referring by the general
practitioner.

=====COLLABORATION

title Evaluative study of the design of
 health centres

investigator Th. van der Voordt, H. van Wegen,
 H. van Hoogdalen, A. Broek, Centrum
 voor Architectuuronderzoek, Delft

duration 1980 - continuous project

publication Hoogdalen, H. van, Th.J.M. van der
 Voordt, H. van Wegen
 Spatial-functional analysis of
 health centres;
 Part I: Research procedures and
 pilot study;
 Part II: Documentation and ground-
 plan analysis, 1982
 (reports)

abstract-----

What spatial conditions are advisable for the ef-
fective functioning of health centres?

=====COLLABORATION

title Registration of collaborating
 entities in primary health care

investigator J. van der Zee, W.G.W. Boerma, Ne-
 derlands Huisartsen Instiut,
 Utrecht

duration 1978 - continuous project

publication Reports:
 The registration of collaborating
 entities in primary health care,
 I: J. van der Zee, 1978
 II: W.G.W. Boerma, 1979
 III: forthcoming

abstract-----

Periodical registration of a number of data con-
cerning health centres and group practices.

c. bilateral collaboration

====GENERAL PRACTITIONER - PSYCHOLOGIST COLLABORATION

title Evaluation of general practitioners'
collaboration with a psychologist

investigator J.M. Bensing, P.F.M. Verhaak, Ne-
derlands Huisartsen Instituut,
Utrecht

duration 1976-1979

publication Verhaak, P.
Evaluative speech: concluding
report: an evaluation of the
collaboration of general prac-
titioners and a psychologist in
Capelle aan de IJssel, 1979

abstract-----

A study of the effects that occur among general
practitioners when they work together with a
psychologist.

====GENERAL PRACTITIONER - PSYCHOLOGIST COLLABORATION

title A scrutiny of co-operating general
practitioners and psychologists

investigator J.M. Bensing, H. Schut, Nederlands
Huisartsen Instituut, Utrecht

duration 1976-1977

publication Schut, H., J.M. Bensing
1. Collaboration of general prac-
titioner and psychologist:
provisional report - inventory
and scrutiny of current and by
now broken working contacts
between general practitioners
and psychologists, 1976;
2. An inventory and scrutiny of
current and by now broken working
contacts between general prac-
titioners and psychologists, 1977

abstract_____

Inventory and scrutiny of current or by now broken working contacts between general practitioners and psychologists in order to determine the best possible work situation.

====GENERAL PRACTITIONER-DISTRICT NURSE COLLABORATION

title Pilot study for a health survey among the aged

investigator A.L. Duyvestijn, Heiloo

duration 1975-1977

publication Ceased without publication

abstract_____

Pilot study among seventy-year-old people to see if the useful effect warrants the efforts required if this is to happen on a regular basis.

====GENERAL PRACTITIONER - PSYCHOLOGIST COLLABORATION

title Psychologists on general practitioners

investigator W.J.A. van den Heuvel, Instituut voor Sociale Geneeskunde, Nijmegen

duration 1972-1973

publication No publication available

abstract_____

A mail-back questionnaire intended to provide insight in the views held by psychologists on co-operation with general practitioners. Special training in this connexion, as well as experience.

=====GENERAL PRACTITIONER - PSYCHOLOGIST COLLABORATION

title Family therapy and medical
 consumption

investigator L.F.M. van der Hoeven, Nijmeegs
 Universitair Huisartsen Instituut,
 Nijmegen

duration 1977-1978

publication Hoeven, L.F.M. van der
 The family psychologist, three
 cheers for practice, 1979 (report)

abstract-----
A study of a few explanatory factors in the inter-
relations of family therapy and medical consumption.

=====COLLABORATION

title Analysis of collaboration
 situations involving social
 workers and district nurses

investigator M.L. Koppels, Nederlands Instituut
 voor Maatschappelijk Werk Onderzoek,
 Den Haag

duration 1972-1976

publication No publication available

abstract-----
A study of the conditions and circumstances required
for the achievement of lasting, developing
collaboration situations involving social workers and
district nurses, through an evaluation of existing
collaboration situations with prominence to process
analysis of the group structure.

====GENERAL PRACTITIONER - PSYCHOLOGIST COLLABORATION

title Co-operation between general practitioner and psychologist

investigator K. v.d. Meer, Rijksuniversiteit Groningen, afdeling Huisartsgeneeskunde, Groningen

duration 1979-1980

publication No publication available

abstract-----
What do patients experience when the general practitioner refers them to the psychologist? How do general practitioner and psychologist judge of the referral on reconsideration?

===GENERAL PRACTITIONER - SOCIAL WORKER COLLABORATION

title The relations of general practitioners and social workers in a health centre

investigator L.J. Menges, K. de Korte-Munk, Rijksuniversiteit Leiden, Vakgroep Klinische Psychologie

duration 1874-1976

publication Korte-Munk, de
Collaboration: an investigation among the general practitioners and social workers at Wassenaar concerning their manner of working and working together, 1975 (report)

abstract-----
A study of the collaboration of general practitioners and social workers in a health centre as compared with those working single-handedly, undertaken in a

commuting district. Mainly the mutual professional image was examined.

====GENERAL PRACTITIONER - SOCIAL WORKER COLLABORATION

title Collaboration of general practitioner and social worker

investigator L.J. Menges, K. de Korte-Munk, R.S. ten Cate, Rijksuniversiteit Leiden, Vakgroep Huisartsgeneeskunde

duration 1974-1976

publication Korte-Munk, K. de Collaboration of general practitioner and social work, 1975 (report)

abstract-----
Do differences exist in the integration between general practitioners working in the health centre and those working single-handedly, and do various social groups differences?

===GENERAL PRACTITIONER - SOCIAL WORKER COLLABORATION

title Referral/co-operation between
general practitioner/social worker

investigator J.D. Mulder, G. van Eik, Gezond-
heidscentrum Wantveld, Noordwijk
aan Zee

duration 1871-1977

publication No publication because pressed for
time

abstract-----
The registration, by a questionnaire/anamnesis form,
(model in Vlaming's thesis), of who is referred for
what reason; assessing effect after half a year.

==GENERAL PRACTITIONER - PHYSIOTHERAPIST COLLABORATION

title Referring/co-operating between
general practitioner and physio-
therapist

investigator J.D. Mulder, Gezondheidscentrum
Wantveld, Noordwijk aan Zee

duration 1974-1976

publication Ceased without publication

abstract-----
Can previous consultation alter the plan of treatment
or prevent treatment? In what circumstances does the
general practitioner deviate from the continuation
treatment proposal of the physiotherapist? Does more
intense communication lead to modifications in the
general practitioner's diagnosis perhaps further
additional examinations?

==GENERAL PRACTITIONER - PHYSIOTHERAPIST COLLABORATION

title Collaboration of general practitioner and physiotherapist

investigator J.D. Mulder, R. Groen, Gezondheidscentrum Wantveld, Noordwijk aan Zee

duration 1980 - on its way

publication Forthcoming (1982)

abstract-----
An examination whether close co-operation makes for short therapies. What changes in the referral pattern occur in the event of close co-operation?

====GENERAL PRACTITIONER - PSYCHOLOGIST COLLABORATION

title Co-operation of general practitioner and psychologist

investigator Nederlands Huisartsen Instituut, Utrecht

duration 1972-1973

publication Ceased without publication

abstract-----
An inventory of the present co-operation between general practitioners and psychologists. An inventory of the desired co-operation of general practitioners and psychologists.

====GENERAL PRACTITIONER - PSYCHOLOGIST COLLABORATION

title Psychosocial patient care in Breda
(Breda Psh)

investigator F.L. Sanavro, P.F.M. Verhaak,
Nederlands Huisartsen Instituut,
Utrecht

duration 1979 - on its way

publication Sanavro, F.L.
Problem patients in the general
practice: views held by doctors on
their problem patients and the
effects for patient histories
(report forthcoming, 1982)

abstract

1. Research into inter-GP variance by explicitly coupling input (patient's problem definition) with output (patient's history).
2. The influence of the general practitioner's perception of complaints (labeling) on the patient history.
3. The influence which collaboration of general practitioner with therapeutic team has on 2).

====GENERAL PRACTITIONER - SOCIAL WORKER COLLABORATION

title Evaluation of general practitioner/
social worker collaboration

investigator C.P. Schouwstra, Philips Medische
Dienst, Eindhoven

duration 1975-1980

publication Terminated without publication

abstract

1. A study of the possibility of collaboration
2. An attempt to realize such collaboration
3. Team discussions
3. More detailed problem definition and suggestions
for solutions.

====GENERAL PRACTITIONER - PSYCHOLOGIST COLLABORATION

title Psychotherapy in primary health care

investigator A.J.A. Smits, Nijmeegs Universitair
Huisartsen Instituut, Nijmegen

duration continuous project

publication

1. Smits, A.J.A., G. van Mierlo

abstract

The study aims at an evaluation of the co-operation of general practitioners and social scientists/psychologists; in addition, clients/patients, the referring general practitioners and the therapists comment upon the result of the therapeutic intervention.

===GENERAL PRACTITIONER - SOCIAL WORKER COLLABORATION

title Mutual image-building of physicians
and social workers

investigator J.P.M. van der Voort, R. Dollekens,
A.Ph. Visser, Huisartsen Instituut
der Vrije Universiteit, Amsterdam,
Amstelveen

duration 1971-1973

publication Terminated without publication

abstract

No further information available.

=====SOCIAL WELFARE

title Regionalization of social welfare
investigator C. Woldringh, Instituut voor Toe-
 gepaste Sociologie, Nijmegen
duration 1974-1977
publication Woldringh, C., J.M. Hutjes
 Preliminary investigation concerning
 regionalization of social welfare:
 a pilot study in Arnhem and environs
 of the possibilities of and problems
 connected with regionalization of
 social welfare, 1975 (report)

abstract-----
Preliminary investigation of the problems connected
with and possibilities of regionalization of social
welfare, resulting in two proposals for further
investigation.

III
Research in or into one primary care discipline (for general practitioner, see IV)——

a. district nurse (including well-child centres)

=====PROFESSIONAL HELPER - PATIENT' RELATIONSHIP

title The 'Zwolle Break-down project'
investigator I. Ekker, Psycho-somatische Werk-
 groep Zwolle, Biddinghuizen
duration 1973-1976
publication Ekker, I.
 Dying at home, Huisarts en Weten-
 schap 8 (1976) pp. 235 ff

abstract-----
Analysis of the relation break-down between general
practitioner and patient, which causes a breach.

=====DISTRICT NURSE

title The role of the district nurse in
 combating cardiovascular disease
investigator L.M.B. Ellerbroek, Provinciale Raad
 voor de Volksgezondheid voor Noord-
 Holland, Haarlem
duration 1974-1977
publication Ceased without publication

abstract-----
To assess the present activities of the district nurse
in this field, and to consider the factors that
conduce to such activities.

==WELL-CHILD CENTRE (INFANTS AND PRE-SCHOOL CHILDREN)

title The well-child centre for pre-school
 children in relation to identifi-
 cation of somatic fixation

investigator J. van Eijk, A.J.A. Smits, G. van
 Mierlo, Nijmeegs Universitair Huis-
 artsen Instituut, Nijmegen

duration 1980 - on its way

publication Smits, A.
 1. Home visiting as a method of
 early identification, 1980
 2. Somatic fixation: parent inter-
 views and well-child centres;
 the evolution of a form of
 preventive care, 1981 (reports)

abstract

The development of a diagnosing system for the
detecting of processes of somatic fixation within
the framework of the well-child centre for infants
and pre-school children.

== WELL-CHILD CENTRE (INFANTS AND PRE-SCHOOL CHILDREN)

title Some observations made in the well-child centre for infants

investigator R. Gerritzen, Nederlands Instituut voor Praeventieve Geneeskunde, Leiden

duration 1972-1973

publication Student's paper (1972)

abstract_____

An inquiry into the possibility of observing the behaviour of mother and child in the well-child centre and the question whether the mother's behaviour toward the child is illustrative of a particular attitude of the mother. For a few children who were frequent visitors longitudinal observations were done for changes in motherly behaviour as the child grows older.

===WELL-CHILD CENTRE (INFANTS AND PRE-SCHOOL CHILDREN)

title Congenital Hip-Joint Dysplasia

Investigator Z.J. van Hees-van der Laan, M.M. Huttinga-Edens, Werkgroep CB-artsen in Groningen, Paterswolde

duration 1976-1980

publication 1. Hees-van der Laan, Z.J., M. Huttinga-Edens
An investigation into congenital hip-joint dysplasia in well-child centres in Groningen, 1980 (report)

 2. Hees-van der Laan, Z.J., a.o.
Congenital dysplasia of the hip-joint in infants; an investigation in well-child centres in Groningen, Nederlands Tijdschrift voor Geneeskunde 125 (1981) 47

pp. 1913-1917

abstract_____

Inventory/standardization of the examinations for congenital hip-joint dysplasia in well-child centres in Groningen.

===WELL-CHILD CENTRE (INFANTS AND PRE-SCHOOL CHILDREN)

title The task of the child welfare
 doctor in preventive medicine

investigator I. ter Haar Romeny-Wachter,
 P.C.J. Wassen-van Schaveren, Ne-
 derlands Instituut voor Praeven-
 tieve Geneeskunde, Leiden

duration 1970 - unknown

publication No publication available

abstract_____

An evaluation of the mode of procedure of well-child centres.

=====DISTRICT NURSE

title The attitude of the district nurse
 toward cancer

investigator W.J.A. van den Heuvel, Studiecentrum
 Sociale Oncologie, Amsterdam

duration 1977-1978

publication Heuvel, W.J.A. van den
 Under-information about early
 detection, risk factors, possi-
 bilities of treatment etc. among
 district nurses, 1978 (report)

abstract-----
An investigation of the knowledge of cancer prevention
and survival, the attitude toward and familiarity with
cancer, and preventive action of the district nurse.

===WELL-CHILD CENTRE (INFANTS AND PRE-SCHOOL CHILDREN)

title Detection methods in well-child
 centres for infants

investigator B.M. Hulst-v.d. Berg, Instituut
 voor Sociale Geneeskunde, Groningen

duration 1975-1977

publication No publication available

abstract-----
The preparation of a detection programme for infants
in order to identify deviations at the right moment
for the purpose of being able to effect such remedies
as will make for the physical and mental prosperity of
the baby.

===== DISTRICT NURSE

title Breast-feeding in Terneuzen

investigator G.A. de Jonge, Nederlands Instituut voor Praeventieve Gezondheidszorg, Leiden

duration 1978-1980

publication Jonge, G.A. de, M.M. van der Klaauw, Th.H.M. de Beer
1. Breast-feeding in Terneuzen, Tijdschrift voor Jeugdgezondheidszorg 11 (1979) pp. 34-36;
2. Stimulating breast-feeding, Nederlands Tijdschrift voor Geneeskunde 123 (1979) pp. 741-8

abstract-----
A study of breast-feeding in a place where attempts are made to stimulate breast-feeding by working in co-operation.

==WELL-CHILD CENTRE (INFANTS AND PRE-SCHOOL CHILDREN)

title Preventive psychosocial care for pregnant women and mothers of infants

investigator H. Kits van Heijningen, Universiteit van Amsterdam, afdeling Kinderpsychiatrie, Amsterdam

duration 1970 - unknown

publication No publication available

abstract-----
Preventive psychosocial care for pregnant women and mothers of infants intended to ensure the optimum development of the (coming) baby, given by a social worker who is a collaborator of a pregnancy outpatient department and well-child centre for infants.

=====MENTAL HEALTH CARE

title Research project on Social and
 Mental Health Care

investigator C.M. van 't Klooster-van Wingerden,
 J. Swarte, C. Hosman, Nationaal
 Centrum voor de Geestelijke Volks-
 gezondheid, Utrecht

duration 1968-1978

publication Brand, J., J. Brinxma, C. Hosman
 Prevention by the Ambulatory Mental
 Health Service in the Netherlands:
 an inventorizing study of prevention
 activities and their background in
 Ambulatory Mental Health Care
 (report forthcoming, 1982).

abstract-----

A study of needs and facilities in the field of Mental
Health Care as seen by key figures such as general
practitioners.

==GENERAL PRACTITIONER - DISTRICT NURSE COLLABORATION

title A study of the importance of the
 district nurse in Social Health
 Care

investigator M.H.J.M. Knapen, W.C.M. Scheffer,
 J.M. Hutjes, Instituut voor Toege-
 paste Sociologie, Nijmegen

duration 1971-1975

publication Knapen, M.H.J.M., W.C.M. Scheffer,
 J.M. Hutjes
 Patient, district nurse and
 general practitioner, and their
 perceptions of each other, 1975
 (report)

abstract

With reference to a number of cases of patient/client care randomly selected from several categories of patients/clients of district nursing, interviews will be held with the patient himself, the district nurse involved and the general practitioner, intended to assess the manner in which the district nurse and the general practitioner are involved, both independently and in mutual contact, in health care as required in these actual cases, as well as the appreciation of such care.

===GENERAL PRACTITIONER - DISTRICT NURSE COLLABORATION

title District nurse and general practitioner in home care

investigator M.H.J.M. Knapen, W.C.M. Scheffer, J.M. Hutjes, Instituut voor Toegepaste Sociologie, Nijmegen

duration Knapen, M.H.J.M., W.C.M. Scheffer, J.M. Hutjes
District nurse and general practitioner in home care: a study of the professional help needed and given in 1000 cases of district nursing, 1975 (report)

abstract

By way of reviewing, questionnaires and discussion reports, the knowledge and attitude of district nurses after they were instructed in psycho-hygiene were evaluated.

===WELL-CHILD CENTRE (INFANTS AND PRE-SCHOOL CHILDREN)

title The information supplied by parents visiting the well-child centre

investigator M.P. Rasker-Krijgsman, Instituut voor Sociale Geneeskunde, Groningen

duration 1973-1978

publication Rasker-Krijgsman, M.P., B.M. Hulstvan de Berg
A different style of well-child centre for infants, Maandblad voor Maatschappelijke Gezondheidszorg, 3 (1975) pp. 32-34

abstract

A well-child centre for infants in which the district nurse discusses the feeding with the mother and as a result consultation with the doctor can be given more time which allows of a more individualized approach of the mother.

==WELL-CHILD CENTRE (INFANTS AND PRE-SCHOOL CHILDREN)

title A different style of well-child
centre for infants

investigator M.P. Rasker-Krijgsman, B.M. Hulst-
van de Berg

duration 1974-1976

publication Rasker-Krijgsman, M.P., B.M. Hulst-
van de Berg
A different style of well-child
centre for infants, Maandblad voor
Maatschappelijke Gezondheidszorg, 3
(1975) pp. 32-34

abstract-----
The preparation, as faithfully as possible, of a
detection list for the physical and mental development
and health of the baby.

==WELL-CHILD CENTRE (INFANTS AND PRE-SCHOOL CHILDREN)

title The psychomotor development of
infants and pre-school children
visiting three well-child centres
in the Utrecht urban district

investigator E.A. Schlesinger-Was, Nederlands
Instituut voor Praeventieve Gezond-
heidszorg, Leiden

duration 1973-1979

publication Schlesinger-Was, E.A., J.C. van
Wieringen
Age distribution of development
characteristics at infantile age,
March 1979 (report)

abstract-----
The development of methods of research, standard
values and methods of registration for the use of
well-child centres.

===WELL-CHILD CENTRE (INFANTS AND PRE-SCHOOL CHILDREN)

title An evaluation of medical cards used
 in well-child centres for infants,
 pre-school and school children

investigator E.A. Schlesinger-Was, J.C. van
 Wieringen, Nederlands Instituut voor
 Praeventieve Gezondheidszorg, Leiden

duration 1967-1973

publication No publication available

abstract_____

An attempt at improving registration by means of
participation and open-ended interviews.

===WELL-CHILD CENTRE (INFANTS AND PRE-SCHOOL CHILDREN)

title Psychomotor development of infants
 and pre-school children visiting
 well-child centres

investigator E.A. Schlesinger-Was, Nederlands
 Instituut voor Praeventieve Ge-
 zondheidszorg, Leiden

duration 1977-1979

publication Ceased without publication

abstract_____

No further information available.

Improving the instruction in co-operation with the advisers.

=====YOUTH HEALTH CARE

title A mine of information
investigator A.H.J. Visch, Nederlands Instituut
 voor Kinderstudie, Den Haag
duration 1977-1980
publication Ceased without publication

abstract-----
The evolvement of methods to be used in recognizing educational questions and educational insecurity presented by parents of young children and in the response given by youth health care.

==WELL-CHILD CENTRE (INFANTS AND PRE-SCHOOL CHILDREN)

title The 'mine of information' function
 of well-child centres
investigator A.H.J. Visch, Nederlands Instituut
 voor Kinderstudie, Den Haag
duration 1980 - on its way
publication No publication available

abstract-----
An evaluation of the methods used in recognizing educational questions and educational insecurity and the response of the practitioner in the well-child centre.

=====MENTAL HEALTH CARE

title Effects of the Mental Health
Facilities course

investigator A.Ph. Visser, Vrije Universiteit
Vakgroep Algemene Sociologie,
Amsterdam

duration 1978 - on its way

publication Visser, A.Ph., H. Pekelharing
Evaluation of the Mental Health
Care course in Amsterdam-Noord, 1981
(report)

abstract-----
A study of the effects an intensive course has on
knowledge and attitude concerning mental health care.

=====DISTRICT NURSE

title Youth nurse

investigator R.L. van Voorthuysen, Ministerie
WVC, Geneeskundige Hoofdinspectie,
Leidschendam

duration 1971-1973

publication Provisional report

abstract-----
No further information available.

b. Social worker

=====SOCIAL WORK

title Defining aspects of General Social Work

investigator A.A.M. Fiselier, Sociologisch Instituut, Nijmegen

duration 1975-1982

publication Fiselier, A.A.M.
(thesis forthcoming, 1982);
1. Notions held by clients and social workers on professional help, 1981 (report);
2. Disparity of ideas on professional help, 1981 (book)

abstract-----

1. An inquiry concerning aspects of professional help as given by General Social Work
2. Theory-formation about the relations between those seeking and giving help.

=====SOCIAL WORK

title Description and evaluation of the experimental project for General Social Work Registration

investigator H. de Graaf, Nederlands Instituut voor Maatschappelijk Werkonderzoek, Den Haag

duration 1974-1977

publication No publication available

abstract-----

No further information.

=====SOCIAL WORK

title The position of the social worker
investigator E.J.H. ten Heine, Sociologisch
 Instituut, Nijmegen
duration 1973-1978
publication Heine, J.H. ten, T. Biewenga
 Focusing on professional help;
 researchers on social work (book
 forthcoming 1982)

abstract-----

An investigation of the behaviour of general social workers (other than supervisory) and of factors affecting this behaviour.

=====SOCIAL WORK

title The occupational role behaviour of
 the general social worker
investigator E.J.H. ter Heine, Sociologisch
 Instituut, Nijmegen
duration 1975-1979
publication Heine, E.J.H. ter
 Social workers in their work, 1979
 (report)

abstract-----

1. To gain insight in the aspects of social work bearing on helping clients
2. Further development and testing of a portion of theory dealing with the content of the social worker's role behaviour.

 The search for and implementaiton
 of goals in general social work
 (summary), 1981;

4. Melief, W.
The goals of clients and workers,
1981 (reports)

abstract_____

Inventory/orientation in preparation of and co-ordination of evaluative research in the field of general social work.

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title Research into the client- social
 worker relationship

investigator A.J. Stikker, C.P. van Gelder,
 Nederlands Instituut voor Maat-
 schappelijk Werkonderzoek, Den Haag

duration 1977-1980

publication Stikker, A.J., C.P. van Gelder
 Stories of helping, 1980 (report)

abstract_____

No further information available.

=====GROUP THERAPY

title Experimental group therapy in
primary health care

investigator R.E. Veen, Den Haag

duration 1977-1978

publication No publication available

abstract

People with psychosomatic complaints in which, it is supposed, environmental conditions have an important part are given effective means to handle the complaints. Methods used in group therapy and group work will be used to find both the underlying causes and possibilities of taking the problems in hand.

c. physical therapist

=====PHYSIOTHERAPY

title Explorative study of the use of
 physiotherapy in primary care -
 1979

investigator H. Crebolder, F. Bergmans, Gezond-
 heidscentrum Withuis, Venlo

duration 1979 - on its way

publication No publication available

abstract-----
With regard to every new patient in 1979 a number of
data is recorded by four physiotherapists.

d. family visitor

===== FAMILY CARE

title Population survey with reference to
 family care

investigator R. s'JACOB, Nederlands Instituut
 voor Maatschappelijk Werkonderzoek,
 Den Haag

duration 1974-1977

publication s'Jacob, R.
 Population survey with reference to
 family care, 1975 (report)

abstract-----
An inquiry into the potential needs among the Dutch
public for various forms of professional help in the
event that the homemaker drops away.

title The need for general practitioners
in the first echelon of Dutch health
care

investigator J. Boot, J.M. van Zutphen, Rijks-
universiteit, Medische Faculteit,
Capaciteitsgroep Huisartsgeneeskunde
Maastricht

duration 1976-1982

publication Boots, J., W.M. van Zutphen
Professional orientation of general
practitioners, Medisch Contract 36,
(1981) pp. 65-68; (thesis
forthcoming, 1982)

abstract-----

1. Evolvement of a method of planning health care
staffing
2. Scientific contribution to policy-making in

respect of the need for general practitioners.

=====ESTABLISHING/LEAVING GENERAL PRACTICE

title Leaving the general practice 1972-1978

investigator J. van Duren, Nederlands Huisartsen Instituut, Utrecht

duration 1978-1980

publication Studies based on the GP registration: leaving the general practice 1972-1978. Some consequences of the changing age pyramid in the profession of general medicine (report)

abstract-----

A survey of those leaving the general practice and of developments over the years.

=====ESTABLISHING/LEAVING GENERAL PRACTICE

title GP registration

investigator P.P. Groenewegen, Nederlands Huisartsen Instituut, Utrecht

duration 1977 - continuous project

publication Periodical publications to which subscription is possible: Cijfers en Studies uit de Huisartsenregistratie

abstract-----

Characteristics of municipalities and the distribution, establishment and leaving practice of general practitioners. The body of the research is divided in a number of separate studies.

=====ESTABLISHING/LEAVING GENERAL PRACTICE

title Leaving the general practice
investigator P.P. Groenewegen, Nederlands Huis-
artsen Instituut, Utrecht
duration 1976-1978
publication Groenewegen, P.P., J. van der Zee
1. Studies based on the GP
registration I: leaving the
general practice 1972-1975, 1977;
2. Leaving the general practice,
1978;
3. Same, summary, 1978 (reports)

abstract-----
Tracing the reasons for premature (prior to
superannuation) discontinuance of the general
practice.

=====ESTABLISHING/LEAVING GENERAL PRACTICE

title The practice hunt and establishment
as a general practitioner
investigator P.P. Groenewegen, Nederlands Huis-
artsen Instituut
duration 1979 - on its way
publication Groenewegen, P.P.
Establishment policies for general
practitioners, 1980 (book)

abstract-----
In what manner and for how long do prospective
general practitioners look around for what kind of
practice? How may differences in the search behaviour
between prospective general practitioners and changes
in search behaviour over time be accounted for? What
social and structural conditions determine the
chances of establishment?

=====ESTABLISHING/LEAVING GENERAL PRACTICE

title Women GPs
investigator P.P. Groenewegen, Nederlands Huis-
artsen Instituut, Utrecht
duration 1979-1981
publication Groenewegen, P.P., J. van der Zee
A proposition for an investigation
into problems with the employment
and work situation of women GPs,
1979 (report)

abstract-----
A study concerning problems women GPs may have in
obtaining work and the necessity of research in this
respect. Description of the aggregate of women GPs
of the spring of 1979.

=====ESTABLISHING/LEAVING GENERAL PRACTICE

title Underlying circumstances determining
differences in the distribution of
general practitioners
investigator P.P. Groenewegen, Nederlands Huis-
artsen Instituut, Utrecht
duration 1980 - continuous project
publication Groenewegen, P.
Studies based on the GP registration:
distribution I, 1981

abstract-----
A study of the causes and effects of differences in the
density of general practices in the Netherlands.

=====ESTABLISHING/LEAVING GENERAL PRACTICE

title General practitioners establishing
 practice over the years 1976-1979
 inclusive

investigator P.P. Groenewegen, Nederlands Huis-
 artsen Instituut, Utrecht

duration 1980-1981

publication Groenewegen, P.P.
 Figures and studies based on the
 GP registration (report)

abstract-----
In what way and at what investment cost have general
practitioners acquired their practice in the past few
years.

=====ESTABLISHING/LEAVING GENERAL PRACTICE

title Regional differences in density of
 general practices

investigator P.P. Groenewegen, J. van der Zee,
 Nederlands Huisartsen Instituut,
 Utrecht

duration 1980 - on its way

publication Groenewegen, P.P., B.M. van Benne-
 kom
 Figures and studies based on the GP
 registration, part I, literature
 survey and theoretical consider-
 ations (report)

abstract-----
A study of the causes of regional differences in the
density of general practitioners.

=====GENERAL PRACTITIONER

title Patient distribution over the
general practitioners at Eindhoven

investigator W. Nuyens, Katholieke Hogeschool,
Instituut voor Gezondheidszorg,
Tilburg

duration 1977-1977

publication No publication available

abstract-----
Determination of the places of optimum suitability
for the establishment of new general practitioners,
and the re-distribution of patients over practices
if this should be required for the benefit of
collaboration, Cross Societies and General Social
Work.

b. organizational aspects of practice management
(including support)

=====CONSULTATION

title Sceno test

investigator B. de Beer, G.P. Lauw, J.D. Mulder,
Groepspraktijk Wantveld, Noordwijk
aan Zee

duration 1971-1977

publication No publication available

abstract-----

A study of the sceno test as an instrument to be used by general practitioners which in the event of consultation can supply additional information to the psychiatrist or psychologist.

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title The influence exerted by the
 presence of a junior assistant on
 the presentation of the complaint
 by the patient

investigator H. Belksma, T. Götte, Rijksuniver-
 siteit Leiden, Vakgroep Huisarts-
 geneeskunde, Leiden

duration 1975-1976

publication Götte, T., H. Belksma
 Three is a crowd? A study of the
 influence which a third person (the
 junior assistant) has on the GP-
 patient relationship, 1976 (report)

abstract-----

An examination of the question whether the way in which the patient presents her/his complaint is affected by the presence of a third person.

=====GENERAL MEDICIN

title Dutch general practitioners practising the arts and sciences: doctors' theses written from 1900 till 1978. A retrospect with a perspective on the future. A study of epistemological and methodological and methodological aspects

investigator J.H. Bonarius, Rijksuniversiteit Leiden, Vakgroep Huisartsgeneeskunde, Leiden

duration 1979-1981

publication Bremer, G.J. Studies from the general practice, theses written by general practitioners from 1900 till 1979, Huisarts en Wetenschap 24 (1981) pp. 336-340

abstract-----
No further information.

=====PATIENT REGISTRATION

title The introduction of registration systems to be used in research of the general practice

investigator M.C.M. Ceha, Rijksuniversiteit Leiden, Vakgroep Huisartsgeneeskunde, Leiden

duration 1979 - on its way

publication Ceha, M.C.M. Age-sex register, March 1981 (report)

abstract-----
Making the peripheral clinic (GP region of Leiden and environs) research-susceptible.

=====GENERAL PRACTITIONER

title The application of Problem
 Oriented Practice as a method of
 patient care by the general prac-
 titioner

investigator K.J. van Deen, Rijksuniversiteit
 Groningen, afdeling Huisartsgenees-
 kunde, Groningen

duration 1975-1977

publication No publication available

abstract-----
The investigator's assorted experiences with the
application of the principle of Problem Oriented
Practice in his care for his patients.

=====DIAGNOSTIC CENTRE

title Diagnostic resources

investigator J.P. Dopheide, Nederlands Huis-
 artsen Instituut, Utrecht

duration 1978-1979

publication Included in research: 'Oudenrijn
 diagnostic centre'

abstract-----
An investigation of the connection between enlargement
of a general practitioners opportunities of using
diagnostic aids and his referrals.

=====HOME VISITING

title Home visiting
investigator G. Dorrenboom, Gezondheidscentrum
Feyenoord, Rotterdam
duration 1969-1973
publication No publication available

abstract-----
A study of the pattern of home visiting in relation to
diagnosis, seriousness of the disease and many other
elements, in both urban and rural practices.

=====PRACTICE ORGANIZATION

title Is it any use to add the ECG to the
diagnostic range of the general
practitioner?
investigator J. Ekering, Culemborg
duration 1972-1977
publication Ceased without publication

abstract-----
The question is considered whether an ECG provides
other (and relevant at that) information than the
general practitioner expects of it.

=====PRACTICE ORGANIZATION

title Reporting and registration in the
general practice

investigator F. van de Horst, Rijksuniversiteit
Limburg, Medische Faculteit, Capa-
citeitsgroep Huisartsgeneeskunde,
Maastricht

duration 1975-1980

publication Horst, F. van de
Reporting: a means of developing
general medicine part I and part II,
1980 (report)

abstract-----
The finding of methods of reporting for the use of
primary care, an inventory of events in the general
practice and the pursuit of quality improvement.

=====PRACTICE ORGANIZATION

title H.E.L.P.; General Practitioner/
Primary Care Software

investigator A. de Koning, Bloemendaal

duration 1971-1980

publication Ceased without publication

abstract-----
The H.E.L.P. computer system aims at simplifying,
reducing, speeding-up and streamlining the medical-
administrative and financial activities in a
(dispensing, general) practice of medicine. As a
result, with reference to doctor-patient data there
is

- a. improved and/or quicker accessibility
- b. automation of periodical tasks
- c. the possibility of statistical processing
- d. a basis for exchanges between fellow-practitioners
and researchers.

=====PATIENT REGISTRATION

title The design of a new family card on
 the basis of problem-oriented
 registration and aiming at automatic
 information processing

investigator H. Lamberts, Gezondheidscentrum
 Ommoord, Rotterdam

duration 1976-1977

publication Lamberts, H.
 Problem-oriented patient cards,
 an offshoot from the old stem,
 Huisarts en Wetenschap 22 (1979)
 pp. 3 ff

abstract-----
No further information available.

=====PATIENT REGISTRATION

title Problem-oriented registration in
 primary health care. Monitoring
 project - separate study

investigator H. Lamberts, Gezondheidscentrum
 Ommoord, Rotterdam

duration 1977 - on its way

publication Lamberts, H.
 Problem-oriented registration;
 opportunities for research in the
 general practice, Huisarts en
 Wetenschap 22 (1979) pp. 44-46

abstract-----
No further information available.

=====PATIENT REGISTRATION

title Monitoring project - separate study;
the computer project concerning a
problem-oriented family card

investigator H. Lamberts, W. van Dijk, Gezond-
heidscentrum Ommoord, Rotterdam

duration 1977-1980

publication No publication available

abstract _____
No further information available.

=====PATIENT REGISTRATION

title Monitoring project. Enabling control
of a general practice

investigator H. Lamberts, Gezondheidscentrum
Ommoord, Rotterdam

duration 1978 - on its way

publication Lamberts, H.
1. Primary health care monitoring
project, Huisarts en Wetenschap
23 (1980), pp. 293-304;
2. Monitoring project primary health
care. Practical experiences with
the use of a computerized
information system. In: Rienhoff,
O., M.E. Abrams, edit.: The
Computer in the Doctor's Office,
1980

abstract-----
Continuous information on all contacts between twelve
general practitioners and 22,000 patients: analyzing,
testing, and controlled changes of the general
practitioner's actions.

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title The doctor-patient relationship with
 reference to the participation of
 junior assistants

investigator L.J. Menges, Rijksuniversiteit
 Leiden, Vakgroep Klinische Psycho-
 logie, Leiden

duration 1974-1976

publication Student's paper

abstract-----
No further information available.

=====WEEKEND DUTIES

title Weekend duties

investigator J. van Noort, J. van Eijk, Nederlands Huisartsen Genootschap, Commissie Wetenschappelijk Onderzoek, Utrecht

duration 1973-1977

publication Provisional report of the work group for weekend duties, September 1975

abstract-----
Forestalling problems in the weekend, the most efficient way of rotation.

=====PRACTICE ORGANIZATION

title Services rendered in the Beek en Donk group practice

investigator Th. van Oss, Beek en Donk

duration 1973 - unknown

publication No publication available

abstract-----
An inquiry, through rates of services rendered, nature (home visit or consultation) and time (surgery hours and periods of the day 10-18 h, 18-23 h and 23-08 h) into the possibility of obtaining insight into the general practitioner's peak loads (to be expected).

=====PRACTICE ORGANIZATION

title The computer in the general practice
investigator J. Roukens, SAZZOG, Groningen
duration 1972-1982
publication Roukens, J.
 Automated patient administration and
 invoicing for general practitioners,
 1981 (report)

abstract-----

An inquiry into the extent to which the hospital computer may be useful in the administration and organization of the general practice.

=====PRACTICE ORGANIZATION

title The use of the 'cardiophone' in the
 general practice
investigator J. Schilperoort, Nederlands Huis-
 artsen Instituut, Utrecht
duration 1972-1977
publication 1. Zee, J. van der, J. Schilperoort
 Provisional report on the
 cardiophone transmission
 project, 1975 (report)
 2. Schilperoort, J.
 The applicability of electro-
 cardiographic diagnostics in the
 general practice, 1977 (thesis)

abstract-----

A study of the value of the kind of ECG which, through telephone transmission of the ECG, allows of a speedy expert estimate of it for a given purpose.

=====PRACTICE ORGANIZATION

title General practice Multitest
investigator G. Seldenrijk, Rijswijk Z.H.
duration 1972-1973
publication Ceased without publication

abstract-----
An investigation of the function of the multitest as
a diagnostic facility to be made available to the
general practitioner.

=====PRACTICE ORGANIZATION

title Designing and operationalizing a
 generally applicable computer
 system for the processing and
 analysis of data from longitudinal
 (epidemiological) research
investigator F. Sturmans, S.H.J. Veling, M. van
 't Hoff, Instituut voor Sociale
 Geneeskunde, Nijmegen
duration 1978 - on its way
publication Software packages for several
 computers

abstract-----
A methodological analysis of longitudinal studies for
the purpose of presenting to the investigators
involved a universally useful software package for
computer systems.

=====GENERAL MEDICINE

title Scientific research in general
medicine

investigator F. Touw-Otten, J.C. van Es, H.A.
Bedeer, Universitair Huisartsen
Instituut, Utrecht

duration 1979-1980

publication Touw-Otten, F.
The pursuit of science and general
medicine, 1981 (thesis)

abstract-----
Devising a strategy for the purpose of providing the
scientific groundwork for general medicine.

=====PRACTICE ORGANIZATION

title Computer project

investigator M.J. van Trommel, Instituut voor
Huisartsgeneeskunde, Rotterdam

duration 1972-1976

publication Ceased without publication

abstract-----
The development of a device for the continuous
registration of symptomatology and morbidity in the
general practice.

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title The opinion of patients on an
 assistant in vocational training
 in the general practice

investigator A.C. Verbeek, J. Toutenhoofd-
 Slabben, Alkmaar

duration 1977-1979

publication Verbeek, A.C., J. Toutenhoofd-
 Slabben
 What do patients think of an
 assistant in vocational training
 in the general practice, 1979
 (report)

abstract-----
A questionnaire submitted to patients of a general
practice.

=====PROFESSIONAL TRAINING (GP)

title Unquiet in the practice of the
 trainer-GP

investigator C.J. IJzermans, Instituut voor Huis-
 artsgeneeskunde van de Universiteit
 van Amsterdam, Amsterdam

duration 1978 - on its way

publication No publication available

abstract-----
Several trainer-GPs are under the impression that
their practice gets in a state of unrest if as-
sistants keep coming and going one after the other.
These trainer-GPs think that they are losing patients.
In addition, it is the investigator's idea that the
'unquiet' affects the person of the trainer-GP, his/
her partner, receptionists etc. as well. Both angles
come under review.

=====HEALTH CARE, STRUCTURE AND FUNCTION

title Evaluation of forms of health care
investigator J. van der Zee, Nederlands Huis-
artsen Instituut, Utrecht
duration 1972-1975
publication No publication available

abstract-----
An evaluation of various forms of health care by
contrasting them (e.g. single-handed practices, group
practices, health centres etc.) among themselves for
a number of criteria.

=====PRACTICE ORGANIZATION

title Diagnostic aids
investigator J. van der Zee, Nederlands Huis-
artsen Instituut, Utrecht
duration 1973-1976
publication No publication available

abstract-----
The opinion of consulting medical officers in the
service of health funds on the use of special
diagnostic aids by the general practitioner.

c. training, postgraduate courses, testing

=====TESTING

title Self-evaluation programmes for the
use of European general prac-
titioners

investigator G. Dorrenboom, Gezondheidscentrum
Feyenoord, Rotterdam

duration 1977-1980

publication Ceased without publication

abstract-----
No further information available.

=====TESTING

title Effect of evaluative training course
of 'GP and somatic fixation' in the
GP training year

investigator J. van Eijk, M. Beek, M. Mesken a.o.
Nijmeegs Universitair Huisartsen
Instituut, Nijmegen

duration 1979 - continuous project

publication Somatic fixation,
part I: Mokka, H.
Report of a pilot study
among ten general prac-
titioners, 1981;
part II: Mokka, H., A. Smits,
R. Grol, 'Prevara', an
observation instrument for
activities of general
practitioners with

- reference to processes of somatic fixation, 1981;
- part III: Grol, R.
Preventive attitude of the general practitioner, report of the preparation of a battery of questions on preventive attitudes regarding processes of somatic fixation, 1981;
- part IV: Beek, M.
The spread of responsibility and exclusively somatic care, report on the development of a scale of attitudes for general practitioners, 1981;
- part V: Jong, H. de
Report on the development of a 'LOCH' scale measuring the general practitioner's locus of control, 1981;
The Prevention of somatic fixation project group, Questionnaire intended for the study of the relation between preventive behaviour and findings on referral rates and prescription, part IX, 1981;
Eijk, J.Th.M. van, H.G.M. v.d. Velden,
Rehabilitation der Selbstverantwortung, editorial, 'Allgemein Medizin International 3 (1981) pp. 100 ff (in German),
Eijk, J.Tj.M. van,
'Medicalization' from the

point of view of general
medicine, Metamedica 60 (1981)
10, pp. 438-451;
Eijk, J.Tj.M. van, H.G.M.
v.d. Velden, Selbst-
verantwortung der Gesund-
heit, Der Praktische
Arzt 18 (1981) pp. 3381 ff
(in German)

abstract

The changes in attitude, behaviour and knowledge of
general practitioners training for practice that occur
after specific teaching in this respect.

=====PROFESSIONAL TRAINING (GP)

title Evaluating for the benefit of the
 GP training

investigator L. Kolthoff-Tan, Instituut voor
 Huisartsgeneeskunde van de Univer-
 siteit van Amsterdam, Amsterdam

duration 1978 - continuous project

publication Kolthoff-Tan, L.
 The efficacy for general medicine of
 medical teaching in the field of
 somatic disease;
 part I: Sets of symptoms and
 syndromes, June 1979;
 part II: Medical-technical skills,
 July 1980 (reports);
 The efficacy of medical teaching
 with reference to the practising of
 general medicine, Medisch Contact 4

(1980) pp. 119-122; The efficiency
of medical-technical skills, Medisch
Contact 47(1980) pp. 1455-1459

abstract_____

Matching medical training to the practice of general
medicine.

=====PROFESSIONAL TRAINING (GP)

title Evaluating the GP's professional
 training

investigator G.J. van der Klauw, H.J. Dekker,
 M. van Trommel

duration 1975-1978

publication Klauw, C.J. van der, H.J. Dekker,
 M. van Trommel
 Evaluating the GP's professional
 training, 1978 (report)

abstract_____

An operationalization of objectives, viz.

- being able to perform processes of patient care
- being able to collaborate with other practitioners
- being able to apply the knowledge and skills
 acquired in a university training to the situation
 in which a GP works.

=====PROFESSIONAL TRAINING (GP)

title The quest for a model of training

investigator E. Kocken, K. van Til, H.J. van
 Aalderen, A.P. Noyon, Huisartsen
 Instituut der Vrije Universiteit,
 Amstelveen

duration 1979 - on its way

publication Kocken, E., K. van Til
 The doctor himself, Tijdschrift
 voor Agologie January 1979;
 Bringing system into the general
 practitioner's interviewing skills,
 Medisch Contact 36 (1981) 12 pp.
 341-345.
 The responsible patient and his
 doctor, Medisch Contact 39 (1981)
 pp. 1181-1187.
 Responsibility must be learned
 (book forthcoming, 1982).

abstract-----
Improving the supervision of the interviewing training
for prospective general practitioners: a study of the
possibilities.

=====PROFESSIONAL TRAINING (GP)

title Evaluation concerning an experi-
mental basic group of recently
established general practitioners

investigator M. Kupecz-Zeeuwen, Nederlands
Huisartsen Instituut, Utrecht

duration 1972-1975

publication No publication available

abstract-----
An examination of the practical problems that present
themselves to the newly established general prac-
titioner. The main emphasis is given to attitude
development and emotional maturing.

=====POST-GRADUATE TRAINING

title Evaluating the Plasmolen post-
graduate course

investigator W. Neefs, Nijmeegs Universitair
Huisartsen Instituut, Nijmegen

duration 1971-1973

publication No publication available

abstract-----
Rating the effects concurrently with and six months
after the course.

=====TESTING

title The views taken by general practitioners on their task in the psychosocial area of patient care

investigator H. Scheepers, Erasmus Universiteit Medische Faculteit, afdeling Onderwijs-research, Rotterdam

duration 1972-1975

publication Ceased without publication

abstract-----

A mail-back questionnaire intended to find answers to the following questions:

1. What do general practitioners consider to be their task in respect of their patients' psychosocial problems?
2. In how far are the opinions of general practitioners on this subject related to their age, training and manner of practice organization?

=====PROFESSIONAL TRAINING (GP)

title Evaluation of professional training

investigator J.W.G. Schellekens, Nijmeegs Universitair Huisartsen Instituut, Nijmegen

duration 1979 - continuous project

publication No publication available

abstract-----

What progress is there in the medicotechnical skills possessed by assistants in vocational training at the beginning, in the course of and at the end of their GP training?

=====PROFESSIONAL TRAINING (GP)

title Contracts in medical training
investigator G. van Staveren, Huisartsen Insti-
tuut der Vrije Universiteit,
Amstelveen
duration 1977-1977
publication Ceased without publication

abstract-----
A study undertaken to obtain a better view of the
factors that influence the effectivity and efficiency
of training programmes.

=====TESTING

title Testing the practice organization
of general practitioners
investigator Th. van Stockum, Den Haag
duration 1975-1977
publication Stockum, Th.J. van
Testing the practice organization
of general practitioners, 1977
(report)

abstract-----
Some spadework in preparation of methods of practice
observation.

=====TESTING

title Testing in the general practice
investigator Th. van Stockum, Den Haag
duration 1976 - on its way
publication Forthcoming (1983)
abstract_____

No further information available.

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title Attitude research among medical
 students
investigator B. Themans, Instituut voor Huis-
 artsgeneeskunde, Rotterdam
duration 1980 - on its way
publication No publication available
abstract_____

An attempt at describing the development of attitudes
of medical students in respect of their dealings with
patients during their training.

=====PROFESSIONAL TRAINING (GP)

title An evaluation of medicotechnical skills in GP professional training

investigator W. Verdenius, Rijksuniversiteit Groningen, afdeling Huisartsgeneeskunde, Groningen

duration 1980 - on its way

publication Verdenius, W.
Obstetric skills of prospective general practitioners, Medisch Contact 35 (1980) pp. 1026-1031;
On the 'handicraft' of the general practitioner: the general practitioner's medicotechnical skills in relation to the eventuality of future modifications of his duties (report forthcoming, 1982)

abstract-----
What is the level of expertise of assistants (before and after professional training), can any (external) factors be pointed out which influence changes in this respect and, given an existing measuring instrument, what is the value of ratings obtained by it?

=====PROFESSIONAL HELPER/PATIENT RELATIONSHIP

title Evaluation of interview training

investigator P.F.M. Verhaak, Nederlands Huisartsen Instituut, Utrecht

duration 1975 - on its way

publication Forthcoming (1982)

abstract-----
An investigation of the question whether interview training affects the effectiveness and forbearance possessed by the doctor.

=====PROFESSIONAL TRAINING (GP)

title A professional training course of
 general medicine

investigator Th. Voorn, Nijmeegs Universitair
 Huisartsen Instituut, Nijmegen

duration 1972-1975

publication Ceased prematurely, no publications

abstract-----
By way of morbidity registration in the general
practice, the referred mortality and morbidity in
hospitals (distinguished into university and
peripheral hospitals) it is shown what are the
requirements to be considered in the training of
general practitioners.

2. Research into (overall) morbidity in the general practices

===== MORBIDITY REGISTRATION

title How do people get better?
investigator H. Besteman, E. van Beilen, Insti-
 tuut voor Sociale Pedagogiek en
 Andragogiek, Nijmegen
duration 1978-1981
publication A thesis is being prepared

abstract-----
Analysis of the possibilities of self-development in
health care and of employing primary care in the
control of intramural care.

===== MORBIDITY REGISTRATION

title Illness in poetry
investigator G.J. Bremer, Rijksuniversiteit
 Groningen, afdeling Huisartsgenees-
 kunde, Groningen
duration 1977-1981
publication No publication available

abstract-----
No further information available.

=====PATIENT

title Patient
 investigator W. Brouwer, F. Touw-Otten, Univer-
 sitair Huisartsen Instituut, Utrecht
 duration 1972 - unknown
 publication No publication available

abstract-----
 An inquiry into the factors (both medical and non-
 medical) that come into play when somebody calls upon
 the services of the general practitioner.

=====MORBIDITY REGISTRATION

title Continuous morbidity registration
 with the help of Test Stations
 investigator H.J.A. Collette, Nederlands Huis-
 artsen Instituut, Utrecht
 duration 1970 - continuous project
 publication Annual reports of the Test Stations

abstract-----
 53 general practitioners from all over the Netherlands
 collect data on a number of diseases on a weekly
 basis. In addition, three diseases, viz. heart
 attack, cerebrovascular accident and epileptiform
 states are followed over a two-year period.

===== MORBIDITY REGISTRATION

title Amsterdam Test Station Project
investigator R.A. Coutinho, S.J.M. Belteman,
G.G. en G.D., afdeling Volksge-
zondheid, Amsterdam
duration 1978 - continuous project
publication Municipal Medical and Health
Service (GG en GD), Amsterdam,
1979 annual report of the Amsterdam
Test Station project, 1979 through
to 1981

abstract-----

Collection of data on the weekly incidence of morbidity among the Amsterdam populace.

===== MORBIDITY REGISTRATION

title European Sentinel Project
investigator G. Dorrenboom, European General
Practice Research Workshop,
Rotterdam
duration 1977-1980
publication Dorrenboom, G.
Pathways to diagnosis;
part I: Vaginal discharge
part II: Sore throat
part III: Low-back pain (reports)

abstract-----

The creation of a network of Test Stations in Europe enabling weekly exchanges for the purpose of international comparisons of morbidity.

===== MORBIDITY REGISTRATION

title A hundred family examinations
investigator F.J.A. Huygen, J. van Eijk, Nij-
 meegs Universitair Huisartsen
 Instituut, Nijmegen
duration 1972-1979
publication Huygen, F.J.A.
 Skin disorders in the perspective
 of family medicine, Huisarts en
 Praktijk 5 (1981) pp. 64-68

abstract-----
A hundred older and a hundred younger families listed
in one general practice: finding the laws operating
in the medical histories of these two hundred families.

===== MEDICAL CONSUMPTION

title A study of the underlying causes of
 the patient's decision to consult
 with the general practitioner
investigator J.F.J. Jonkers, Huisartsen Insti-
 tuut der Vrije Universiteit
 Amsterdam, Amstelveen
duration 1977-1981
publication No publication available

abstract-----
An inquiry into the factors that come into play in the
event of visits to the doctor, tracing discrepancies
between the actual reasons for a visit and the
doctor's possible response.

===== MORBIDITY REGISTRATION

title The somatization project from the
 point of view of a single-handed
 practice

investigator Th. Kocken, A.J.A. Smits, H.S.M.
 van den Hoejen, Nijmeegs Universi-
 tair Huisartsen Instituut, Nijmegen

duration 1972 - on its way

publication A thesis is being prepared (1983)

abstract-----
A descriptive, inventorizing, longitudinal research.

===== MORBIDITY REGISTRATION

title Morbidity registration

investigator H. Lamberts, Gezondheidscentrum
 Ormoord, Rotterdam

duration 1972-1977

publication Lamberts, H.
 Research of and on primary health
 care, Huisarts en Wetenschap 18
 (1975) pp. 190-192

abstract-----
The pursuit of a more profound understanding of the
morbidity presented in primary health care.

===== MORBIDITY REGISTRATION

title The 1972 morbidity analysis
investigator H. Lamberts, Gezondheidscentrum
 Ommoord, Rotterdam
duration 1974-1976
publication Lamberts, H.
 1972 morbidity analysis by the
 Ommoord group practice: a new way
 of classifying illness-related and
 problem behaviour for general
 medicine I, Huisarts en Wetenschap
 17 (1974) pp. 455-473; idem II,
 Huisarts en Wetenschap 18 (1975)
 pp. 7-39; idem III, Huisarts en
 Wetenschap 18 (1975) pp. 61-73

abstract-----
A new way of classifying illness-related behaviour
and problem behaviour for general medicine.

===== GENERAL PRACTITIONER

title Illness-related behaviour presented
 by the GP
investigator P. Lens, Rijksuniversiteit Leiden,
 vakgroep Huisartsgeneeskunde,
 Leiden
duration A thesis is being prepared

abstract-----
What does a doctor do when he falls ill?

===== MORBIDITY REGISTRATION

title Morbidity experienced and presented
investigator E. van de Lisdonk, H. van de Velden,
Nijmeegs Universitair Huisartsen
Instituut, Nijmegen
duration 1980 - on its way
publication Forthcoming (1983)

abstract-----
An exploration of the variety in illnesses presented
to general practitioners and of the influencing
factors.

===== MORBIDITY REGISTRATION

title Medical consumption in relation to
the patient's perception of the
general practitioner
investigator M.G. van Nieuwenhuizen, Instituut
voor Sociale Geneeskunde, Leiden
duration 1971-1975
publication No publication available

abstract-----
No further information available.

===== MORBIDITY REGISTRATION

title Morbidity analysis in a single-
 handed practice

investigator A.P. Olieman, Den Haag

duration 1972-1976

publication Oliemans, A.P., W. van de Ven,
 Morbidity analysis in a single-
 handed general practice, Huisarts
 en Wetenschap 11 (1975) pp. 437-448

abstract-----
Evidence is given for the influence of social class,
membership of the health fund, size of the family
and housing on morbidity.

===== PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title The somatization project

investigator H.C. Schouwenburg, Instituut voor
 Huisartsgeneeskunde van de Univer-
 siteit van Amsterdam, Amsterdam

duration 1973 - unknown

publication Postma, T.H.M., H.C. Schouwenburg,
 Background problems of surgery
 visitors, Huisarts en Wetenschap
 19 (1976) pp. 109-110

abstract-----
A study of 1) the kind of patient to visit the general
practitioner, 2) the kind of doctor to give the
judgment of 'somatizing' and 3) ensuing events in the
doctor-patient relationship in such a case.

=====PSYCHO-SOCIAL PROBLEMS

title Somatization research
investigator H.C. Schouwenburg, Instituut voor
Huisartsgeneeskunde van de Universi-
teit van Amsterdam, Amsterdam
duration 1975-1977
publication Schouwenburg, H.C.
Somatization research, Nederlands
Tijdschrift voor Psychologie 32
(18 1977) pp. 81-90 and 91-99

abstract-----
Are patients who show somatization tendencies other
people than those who discuss psychosocial problems
with the general practitioner?

=====MORBIDITY REGISTRATION

title Morbidity and health
investigator J.F.M. Thomassen, Huisartsen Insti-
tuut der Vrije Universiteit van
Amsterdam, Amsterdam
duration 1976-1976
publication Thomassen, J.F.M.
Morbidity and health, 1977 (report)

abstract-----
A study of the degree to which a change of residence
or living arrangements is associated with a temporal
increase in the need for help and/or disturbed health.

===== MORBIDITY REGISTRATION

title The medical registration of a
 number of group practices

investigator F. Touw-Otten, Universitair Huis-
 artsen Instituut, Utrecht

duration 1972-1979

publication Kuyvenhoven, M., F. Touw-Otten
 The divergences and similarities
 between the frequencies of first
 contacts made by agrarian,
 autochthonous and 'import' families;
 a secondary analysis making use of
 the findings in three years of
 morbidity registration in a group
 practice established in a rural
 district, January 1978 (report)

abstract-----
An inquiry into a number of morbidity and practice-
analytical findings as well as the connections
between these factors and the interrelatedness of
these findings with demographic and social charac-
teristics.

===== PATIENT

title The pre-medical stage

investigator F. Touw-Otten, Universitair Huis-
 artsen Instituut, Utrecht

duration 1973-1978

publication Touw-Otten, F., M.M. Kuyvenhoven
 The pre-medical stage project,
 part I, a literature research,
 1977 (report)

abstract-----
The ways in which patients respond to their complaints
and illness, and the use they make of medical
resources.

=====PATIENT REGISTRATION

title Evaluation of a diagnostic-
therapeutic procedure (on
retrospection)

investigator W. Verdenius, Rijksuniversiteit
Groningen, afdeling Huisartsgenees-
kunde, Groningen

duration 1973-1979

publication No publication available

abstract-----
An examination of medical records at the time of the
occurrence of an anemia and findings during the next
five years.

=====MORBIDITY REGISTRATION

title An investigation of the incidence
of sociopsychic and somatic
morbidity complaints presented in
primary care

investigator C.A. Vermeulen, Ministerie van
WVC, Leidschendam

duration 1973-1976

publication Vermeulen, C.A.
'Morbidity' in the Hoensbroek-Noord
Health Centre, 1973

abstract-----
An inventory of the patients listed in primary care
as to sociopsychic and somatic dysfunctions.

=====CHRONIC PATIENTS

title Chronic disorders in the general
 practice

investigator Th.B. Voorn, Nijmeegs Universitair
 Huisartsen Instituut, Nijmegen

duration 1980 - on its way

publication Voorn, Th.B.
 The general practitioner's game
 of patience, Huisarts en Wetenschap
 24 (1981), pp. 431-435; a thesis
 is being prepared

abstract-----
The investigation aims at providing a survey of
chronic disease in the general practice. Also, the
consequences for medical training will be considered,
both those for the basic education and those for
GP training.

=====PSYCHO-SOCIAL PROBLEMS

title Depression in the general practice

investigator C.H.A. Westhoff, Nederlands Huis-
 artsen Genootschap, Utrecht

duration 1973-1979

publication Ceased without publication

abstract-----
For twenty patients of approximately a hundred
general practitioners it is studied 1) how the
diagnosis is arrived at 2) how a questionnaire can be
of use in this respect and 3) which therapy is used
and which therapy is most effective.

=====PATIENT

title The patient's grasp of health and
 disease

investigator F.J.M. Woltering, J.F.M. Thomassen,
 G. van Staveren, Huisartsen Insti-
 tuut der Vrije Universiteit,
 Amstelveen

duration 1979 - on its way

publication No publication available

abstract-----
No further information available.

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title Health interview survey

investigator J. van der Zee, Nederlands Huis-
 artsen Instituut, Utrecht

duration 1971-1975

publication No publication available

abstract-----
With the help of interviews, questionnaires and
observations an inventory is drawn up of what people
do about their complaints, what methods professional
helpers have available of handling the complaints
presented to them and what is the pattern of
interactions between the client and the professional
helper, in particular the general practitioner.

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title Patients ratings of the general
practitioner

investigator J. van der Zee, Nederlands Huis-
artsen Instituut, Utrecht

duration 1973-1974

publication No publication available

abstract-----
The analysis of variance is used to investigate
whether the patients' ratings of the doctor are a
characteristic of the patient or rather of the
doctor.

3. Research on patient care by the general practitioner

a. methods of patient care generally

=====DECISION THEORY

title Decision models used by the general practitioner

investigator W. van Basten Batenburg, Huisartsen Instituut der Vrije Universiteit, Amstelveen

duration 1976-1978

publication Basten Batenburg, W. van Decision models used by the general practitioner, 1978 (thesis)

abstract_____

A study of the strategies of action used by the general practitioner including the design of one or more decision models.

=====PSYCHO-SOCIAL PATIENT CARE

title Psychosocial patient care in the general practice

investigator J.M. Bensing, P.F.M. Verhaak, Nederlands Huisartsen Instituut, Utrecht

duration 1974 - continuous project

publication Bensing, J.M., P.F.M. Verhaak, H. Schut a.o., Eindhoven consultation project, 1979:
part I: Final evaluation
part II: A process description
part III: Referral patterns
part IV: Prescribing medicine
part V: Interview behaviour
part VI: Provisional report
part VII: Summary (reports)

abstract_____

The main body of the research was divided in a number

of separate projects, aiming at a degree of insight in psychosocial patient care by the general practitioner.

=====PSYCHO-SOCIAL PATIENT CARE

title Psycho-social patient care in the
 general practice

investigator J.M. Bensing, P.F.M. Verhaak, Neder-
 lands Huisartsen Instituut, Utrecht

duration 1977-1979

publication Bensing, J.M., P.F.M. Verhaak, H.
 Schut
 Eindhoven consultation project; part
 V: interview behaviour, 1979 (report)

abstract-----
By way of a number of separate studies, the investi-
gation aimed at acquiring an understanding of the
psychosocial patient care by the general practitioner.

=====PSYCHO-SOCIAL PATIENT CARE

title Psycho-social patient care in the
 general practice

investigator J.M. Bensing, P.F.M. Verhaak, H.
 Schut, Nederlands Huisartsen Insti-
 tuut, Utrecht

duration 1977-1979

publication Bensing, J.M., P.F.M. Verhaak, H.
 Schut
 Eindhoven consultation project; part
 IV: The prescribing of medicine,
 1979 (report)

abstract-----
The main body of the research was divided in a
number of separate studies, aiming at a degree of
insight into the psychosocial patient care by the
general practitioner.

=====PSYCHO-SOCIAL PATIENT CARE

title Short-term psychotherapy in the
general practice

investigator M.I.Th. Bouth-van der Leeuw,
Universitair Huisartsen Instituut,
Utrecht

duration 1972-1973

publication The study was discontinued without
any publication of results

abstract-----
No further information.

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title Communication in the general
practice

investigator H.J. Brouw, Instituut voor Huis-
artsgeneeskunde van de Universiteit
van Amsterdam, Amsterdam

duration 1980 - on its way

publication No publication available

abstract-----
No further information.

=====ALTERNATIVE MEDICINE

title The effects of acupuncture in the
 general practice

investigator W. van Dijk, Gezondheidscentrum
 Ommoord, Rotterdam

duration 1977-1978

publication Dijk, W. van
 Acupuncture in the Ommoord Health
 Centre, Huisarts en Wetenschap 21
 (1978) pp. 287-289

abstract-----
No further information available.

=====DECISION THEORY

title Problem-solving in the general
 practice

investigator H.J.P.M. Dijkhuis, R.E. Hulshof,
 S. van der Kooij, Rijksuniversiteit
 Leiden, Vakgroep Huisartsgenees-
 kunde, Leiden

duration 1974 - on its way

publication Dijkhuis, H.J.P.M.
 The practice of medicine without
 diagnosis, Modern Medicine, 5
 (1981) 14, pp. 1765-1768

abstract-----
A study intended for a better understanding of the
approach of the general practitioner to diagnostics,
also discussing the use of problem orientation in the
conduct of the practice and problem orientation in
teaching.

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title System thinking as an interviewing
 technique

investigator H.J.P.M. Dijkhuis, M.J.A. de Jonge,
 R. van Spronsen, Rijksuniversiteit
 Leiden, vakgroep Huisartsgenees-
 kunde, Leiden

duration 1975-1980

publication No publication available

abstract_____

No further information available.

=====DECISION THEORY

title Decision strategies in (general)
 medicine (anemia)

investigator R.Edens, Leeuwarden

duration 1977 - on its way

publication No publication available

abstract_____

No further information.

=====PREVENTION

title Identification, detection, treatment and prevention with respect to high-risk families listed in the general practice

investigator J. van Eijk, R. Grol, F.J.A. Huygen a.o., Nijmeegs Universitair Huisartsen Instituut, Nijmegen

duration 1973-1979

publication Eijk, J. van, R. Grol, F.J.A. Huygen a.o. General practitioner and somatic fixation, 1981 (book)

abstract-----

A study of the possibility, by way of early identification, of preventing that patients may mistakenly enter or stay in medical networks.

=====PSYCHO-SOCIAL PROBLEMS

title Life events and illness

investigator J. van Eijk, Nijmeegs Universitair Huisartsen Instituut, Nijmegen

duration 1975-1979

publication Eijk, J. van Life events and illness, 1979 (thesis); Coping with life events, with reference to a few demographic characteristics, Tijdschrift voor Sociale Geneeskunde 57 (1979) pp. 553-561; The various ways in which general practitioners conduct their practice; a method to learn from, Medisch Contact 31 (1979) pp. 987-991

abstract_____

The study provides a better understanding of the psychosocial factors which under the strain of exacting circumstances in the family circle, such as admission to hospital, acute serious illness in the family, chronic disease or change of work, lead to increased dependence on the help given by the general practitioner.

=====PREVENTION

title Preventing somatic fixation

investigator J. van Eijk, M. Beek, R. Grol,
 F.J.A. Huygen a.o., Nijmeegs Uni-
 versitair Huisartsen Instituut,
 Nijmegen

duration 1980 - on its way

publication Forthcoming (1983)

abstract_____

An investigation of the connection between preventive behaviour on the one, and findings regarding referrals and prescriptions on the other hand.

=====DECISION THEORY

title Medical problem-solving
investigator G. van Geldorp, Huisartsen Instituut
der Vrije Universiteit, Amstelveen
duration 1980-1980
publication Geldorp, G. van, K. Hoekman, L. Krol
Medical problem-solving. A project
in education and research within the
framework of the professional
training of general practitioners,
May 1978 (report); In Educational
Research Congress Book: The
construction of an education in
medical problem-solving, 1976;
Geldorp, G. van,
Medical problem-solving, Huisarts
en Wetenschap 23 (1976), pp. 174-
180

abstract

Theory and construction of a model for problem-solving strategies for general practitioners. Cognitive and possibly non-cognitive factors that may influence or determine the general practitioner's line of thought are taken into consideration. The construction and testing of hypotheses.

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title Co-operation of the patient with the
general practitioner

investigator R. van de Grinten, Gezondheidscentrum
Withuis, Venlo

duration 1981 - on its way

publication No publication available

abstract-----

What is the effect on the process of patient care if
a patient offers a more distinct contribution to the
consultation in the surgery?

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title Reassuring in the general practice

investigator A.S.M. Groen, Instituut voor
Huisartsgeneeskunde van de Uni-
versiteit van Amsterdam, Amsterdam

duration 1979 - on its way

publication No publication available

abstract-----

A study of the requirements to be met if patients in
the general practice are to be reassured.

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title The ways in which the adoption of a
 new mode of procedure by the general
 practitioner affects the behaviour
 of patients

investigator J. Hageman-Smit, Huisartsen Insti-
 tuut der Vrije Universiteit,
 Amstelveen

duration 1978 - on its way

publication Hageman-Smit, J.
 'Methodical working', article under
 preparation

abstract-----

1. Are general practitioners who explicitly seek for a medicotechnical approach presented with other problems by their patients than purely somatic ones?
2. How do they deal with such problems?
3. How do patients appreciate this?

=====DECISION THEORY

title Determinants of the decision
 process of the general practitioner
 in respect of the presented
 complaints

investigator F. van der Horst, Rijksuniversiteit
 Limburg, Medische Faculteit Capaci-
 teitsgroep Huisartsgeneeskunde,
 Maastricht

duration 1977-1980

publication No publication available

abstract-----

Devising a method of registration and systematic handling of the diagnostic decision process by general practitioners.

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title Observing the doctor-patient
relationship

investigator M.J.A. de Jonge, Rijksuniversiteit
Leiden, Vakgroep Huisartsgenees-
kunde, Leiden

duration 1978-1980

publication No publication available

abstract-----
No further information available.

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title A study of potential causes of
communication failures in the
interview between doctor and patient

investigator J. Joosten, Sociologisch Instituut,
Leiden

duration 1972-1973

publication Student's paper

abstract-----
An attempt at gaining better insight in how the
interview between doctor and patient is interrelated
with its evaluation.

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title The power of doctors
investigator J.J. Klinkert, Vrije Universiteit
 Vakgroep Algemene Sociologie,
 Amsterdam
duration 1974-1977
publication Klinkert, J.J.
 The power of doctors: the alarmed
 exploration of a profession, 1974
 (book)

abstract-----
The construction of an instrument measuring influence
relations between general practitioners and their
patients as well as the measurement of such relations.

=====PROFESSIONAL HELP

title Patient care behaviour character-
 istics among general practitioners
investigator J.C. van Es, M. Jacobs, M. Kuyven-
 hoven, M. van Nunen, F. Touw-Otten,
 Universitair Huisartsen Instituut,
 Utrecht
duration 1978 - on its way
publication Es, J.C. van, M. Jacobs, M. Kuyven-
 hoven, M. van Nunen, F. Touw-Otten
 Simulierte Beratung als Forschungs-
 methode, Allgemein Medizin Inter-
 national 4 (1980) pp. 160-164
 (in German);
 Es, J.C. van, M. Jacobs, M. Kuyven-
 hoven, M. van Nunen, F. Touw-Otten
 1. The development of a research
 instrument for the measurement of
 some dimensions of the pro-

fessional help given by general practitioners in the case of patients with vague complaints, December 1980;

2. Professional help of the general practitioner in the case of vague complaints; a comparison of patient care behaviour features, making use of a paper simulation of doctor-patient consultations containing a few given facts about referring and prescribing, part 2, December 1981 (reports)

abstract_____

The development of an instrument measuring patient care behaviour characteristics among general practitioners.

=====PSYCHO-SOCIAL PATIENT CARE

title	Diagnostics, GP-patient relationship in general, psycho-social help
investigator	H. van de Molen, Instituut voor Medische Psychologie, Utrecht
duration	1977-1980
publication	No publication available

abstract_____

No further information available.

=====PRACTICE ORGANIZATION

title On the ways in which general practitioners work: does what the doctor takes with him in his car (first-aid set, medicines, diagnostic aids) bear a relation to his manner of working?

investigator J.C.M. Raupp, Nijmeegs Universitair Huisartsen Instituut, Nijmegen

duration 1972-1973

publication Raupp, J.L.M.
On the modus operandi of general practitioners; a quantitative analysis of the manner of working of single-handed general practitioners in the province of Limburg, 1971 (thesis)

abstract-----

A quantitative analysis of the manner of working of general practitioners (n = 200) working single-handedly, broken down into those who are members of the College of General Practitioners (NHG) and those who aren't. Data were obtained by way of an interview schedule presented all over the province of Limburg. The matter was taken in hand in response to the question posed by A. Vrij, secretary to the College: 'Do NHG members work differently from non-NHG members?'

=====DECISION THEORY

title A study of the decision strategies
of the (Rotterdam) general prac-
titioner

investigator J. Ridderikhoff, A. Muller-Sloos,
Instituut voor Huisartsgeneeskunde,
Rotterdam

duration 1978 - on its way

publication No publication available

abstract-----
A study of the general practice as to the presence
and type of any decision strategies that may be found.

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title Doctor-patient relationship

investigator H.J. Roelofs-Heijermans, Nederlands
Huisartsen Instituut, Utrecht

duration 1973-1976

publication No publication available

abstract-----
Literature search of what has been published on the
doctor-patient relationship.

=====PROFESSIONAL HELP

title Dialogic experiential thinking and professional behaviour of the general practitioner

investigator J. op 't Root, Rijksuniversiteit Limburg, Medische Faculteit, Capaciteitsgroep Huisartsgeneeskunde, Maastricht

duration 1980 - on its way

publication No publication available

abstract-----
To make wish-experiences in dialogic thinking explicit; to describe its relevance for the situation of patient care (with occasional references to views of health and disease).

=====DECISION THEORY

title Problem-solving in a medical domain

investigator H. Schmidt, H. Snellen, B. Stalenhoef, M. Verwijnen, T. Imbos, Rijksuniversiteit Limburg, Medische Faculteit, Capaciteitsgroep Huisartsgeneeskunde, Maastricht

duration 1979 - on its way

publication Boshuizen, H.P.A., H.F.A. Claessen
1. Problems surrounding medical problem-solving, a few theoretical and methodological observations, 'Educational Research nr. 5';
2. The reproduction of medical records by doctors and students, 'Educational Research nr. 6', 1981 (reports).

abstract_____

In what manner are problems solved and which are the intervening factors? Which are the important variables and in what way are they interrelated?

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title General practitioners and their
 problem patients: an inquiry into
 the quality of doctor-patient
 communications

investigator H.C. Schouwenburg, C.J.J.M. IJzer-
 mans, Instituut voor Huisartsgenees-
 kunde van de Universiteit van Am-
 sterdam, Amsterdam

duration 1974-1977

publication IJzermans, C.J.J.M., H.C. Schouwen-
 burg
 General practitioners and their
 problem patients: an inquiry into
 the quality of doctor-patient
 communications, Huisarts en Weten-
 schap 19 (1976) pp. 185-189

abstract_____

One component of the somatization project, aimed at acquiring an insight in the extent to which the general practitioner is really aware of his patients' problems.

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title An instrument for the recording of
 doctor-patient interaction

investigator H.C. Schouwenburg, Groningen

duration 1976-1980

publication Ceased without publication

abstract_____

The construction of an interaction schedule intended for the analysis of the doctor-patient interaction as recorded on videotapes during surgery hours.

=====GENERAL PRACTITIONERS

title The professional orientation of
 general practitioners

investigator G. van Staveren, Huisartsen Insti-
 tuut der Vrije Universiteit,
 Amstelveen

duration 1978 - on its way

publication Staveren, G. van, M. de Haan
 Every general practitioner his own
 style, April 1981 (report)

abstract_____

To acquire a better understanding of the connections between the following variables:

- a) mode of procedure of the general practitioner
- b) the medical orientation of the general practitioner
- c) overall value orientation of the general practitioner.

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title Interviews between doctors and patients

investigator B. Themans, Instituut voor Huis-
artsgeneeskunde, Rotterdam

duration 1979 - on its way

publication A thesis is being prepared

abstract_____

Analysis of GP-patient interviews making use of various analytical systems.

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title Verbal correspondence in GP-patient contacts

investigator J.F.M. Thomassen, Huisartsen Insti-
tuut der Vrije Universiteit, Am-
stelveen

duration 1978 - on its way

publication Thomassen, J.F.M.
A description of the measuring
instruments, 1981; four reports on
research proceedings

abstract_____

To what degree and under what circumstances are the patient's behaviour and the general practitioner's actions determined by principles of social exchange and as such predictable?

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title General practitioners' dealings with
 normal functioning

investigator H. van der Voort, Ouderkerk aan de
 Amstel

duration 1979 - on its way

publication A thesis is being prepared

abstract-----
What therapeutic interventions are used by particular
general practitioners in order to (help) enlarge
their patients' understanding of their own functioning
and stimulate a self-developing attitude? What
additional interventions can be offered in a training
for that purpose?

=====GROUP TREATMENTS

title Group treatment of patients in the
 general practice.

investigator C.S.M. Wachters-Kaufmann, Neder-
 lands Huisartsen Instituut, Utrecht

duration 1973-1975

publication Wachters-Kaufmann, C.S.M.
 Group treatment of patients, 1974
 (report)

abstract-----
A literature search concerning the methods and
techniques that may be used in group treatment in the
general practice.

=====GROUP THERAPY

title Working with groups with the Ommoord
group practice for a base

investigator C. van Weel, Gezondheidscentrum
Ommoord, Rotterdam

duration 1974-1979

publication Weel, C. van
Working with groups in the health
centre reconsidered: problem
behaviour in primary care, Huis-
arts en Wetenschap 20 (1977)
pp. 313-319

abstract-----
A description of group work and analysis of the
results of group therapy for patients with psycho-
social 'tensions' which are felt in a strongly
somatic way.

b. In respect of specific groups of the population
(old-age pensioners, women etc.)

=====AGED PEOPLE

title A study among aged people
investigator M.I.Th. Bouth-van der Leeuw,
 Universitair Huisartsen Instituut,
 Utrecht
duration 1972-1973
publication No publication available

abstract-----
Seeking information concerning the psychic problems
the non-demented aged have with their stage of life
in order to achieve better attendance to the aged
in the general practice, this by means of an analysis
of exploratory interviews with aged people and their
attendants.

=====AGED PEOPLE

title A study of some aspects of the fat,
 carbohydrate and iron metabolism in
 aged people listed in a general
 practice
investigator H. Bowles, Maasdam
duration 1971-1979
publication Bowles, C.H.
 Diet habits and pertinent health
 aspects among the aged on a general
 practitioner's list in Rotterdam
 1971-1975, 1979 (thesis)

abstract-----
Longitudinal study with reference to cardiovascular
findings and diet habits, as well as examinations for
vitamin deficiencies. The question concerns: the use
or uselessness of a specific enriched diet for aged
people.

=====AGED PEOPLE

title Plasmatic digoxin levels in the aged
investigator A.K.C. Burger, Den Haag
duration 1974-1977
publication Burger, A.K.C.
 Plasmatic digoxin levels in the
 aged, Nederlands Tijdschrift voor
 Gerontologie 7 (1976) 3

abstract-----
An examination of digoxin consumption by aged people
in a general practice.

=====AGED PEOPLE

title Sexuality among the aged
investigator A.K.C. Burger, Den Haag
duration 1974-1979
publication No publication available

abstract-----
Literature search.

=====ILLNESS RELATED BEHAVIOUR

title Women and health care
investigator M. Engels, L. Verschure, Rijksuni-
versiteit Groningen, afdeling
Huisartsgeneeskunde, Groningen
duration 1978 - on its way
publication Forthcoming (1982)

abstract-----
Differences in illness-related behaviour between men
and women with reference to the way in which the
general practitioner may act upon his recognition
of them.

=====PATIENT REGISTRATION

title An investigation of long-term
unfitness for work, held by general
practitioners in Groningen and
environs
investigator J.W. Groothoff, Instituut voor So-
ciaal Medische Wetenschap, Gro-
ningen
duration 1976-1978
publication Ceased without publication

abstract-----
The general practitioner keeps records of particulars
concerning long-term unfitness for work. Information
is sought on the general practitioner's opinion as to
prognosis and cause of the disablement of the
patients in their practice.

=====HEALTH GUIDANCE AND EDUCATION

title Health guidance for the aged
investigator P.P.J. Houben, Landelijk Centrum
Dienstverlening GVO, Bunnik
duration 1971-1973
publication Houben, P.P.J.
1. District nursing with reference
to health guidance and education
among the aged in the province
of Utrecht, 1973
2. Provisional report of the group
discussions among district
nurses, 1973 (reports)

abstract-----
Group discussions, questionnaires and interviews were
used to ascertain what view professional helpers take
of their task and what needs and expectations are
felt by the aged, for the ultimate goal of evolving
health guidance and education programmes for the aged.

=====PATIENT REGISTRATION

title Analysis of the patients who on
average visit the general prac-
titioner twice or more a month
investigator J.Ph.L. Koperberg, Universitair
Huisartsen Instituut, Utrecht
duration 1971-1978
publication No publication available

abstract-----
Over a two-year period all contacts with patients were
recorded on punch drafts, to be later transferred to
punch cards and prepared for computer processing.
Processing then is done through analysis of programme
material provided by the computer.

=====AGED PEOPLE

title Evaluation of one year of care for
the aged in a general practice

investigator K. van der Meer, Rijksuniversiteit
Groningen, afdeling Huisartsgenees-
kunde, Groningen

duration 1972-1974

publication Ceased without any publication
becoming available

abstract-----
Testing and evaluating one year of care for the aged
making use of data from practice analysis.

=====PSYCHO-SOCIAL PATIENT CARE

title The general practitioner and victims
of violence

investigator G. van Mierlo, Nijmeegs Universitair
Huisartsen Instituut, Nijmegen

duration 1979 - on its way

publication Verjans, J., Th. de Groot
The general practitioner and victims
of violence (report);
Graauw, W. de, A. Maes, P. Rosheuvel
Victims of violence, January 1981
(students' paper)

abstract-----
The study seeks to ascertain if and in what way the
general practitioner encounters victims of violence;
how his response to any related problems may be
improved upon within the framework of existing
conditions.

=====EARLY DIAGNOSING

title An inventory of three-year-old
 children as to behaviour and living
 arrangements

investigator E.A. Mulder-Wijt, Gezondheidscen-
 trum Wantveld, Noordwijk aan Zee

duration 1972 - unknown

publication No publication available

abstract-----
Making use of an interview schedule and Stutman test,
it is undertaken to collect data required if health
guidance and education are to be provided and
interrupted development is to be detected at an early
stage.

=====MORBIDITY REGISTRATION

title Behaviour in health and illness as
 related to the family and disease

investigator W. Neefs, Nijmeegs Universitair
 Huisartsen Instituut, Nijmegen

duration 1971-1976

publication No publication available

abstract-----
The detection of sociopsychological and sociological
conditions that determine the difference between
latent and overt morbidity in the general practice.

=====FAMILY

title The threatened family
 investigator W. Neefs, Nijmeegs Universitair
 Huisartsen Instituut, Nijmegen
 duration 1974-1976
 publication Ceased without publication

abstract-----
 The identification, tracing, treatment and prevention
 of family situations in which the young child may be
 checked in its growth and development.

=====FUNCTIONAL COMPLAINTS

title Screening and follow-up of elderly
 dockers. An evaluative study
 investigator A. Schelling, Bedrijfsgeneeskundige
 Dienst, Rotterdam
 duration 1972-1976
 publication Schelling, A.
 Screening and follow-up of elderly
 dockers. An evaluative study
 (thesis)

abstract-----
 The study provides a better understanding of the
 intervention procedures used by general practitioners
 in respect of risk factors related to cardiovascular
 disease and of the care for elderly employees in
 Rotterdam harbour.

=====AGED PEOPLE

title A study among the aged
investigator C. Schouwstra, Philips Medische
 Dienst, Eindhoven
duration 1974-1977
publication Schouwstra, C.
 A study among the aged part I and II
 1977 (reports)

abstract-----

Restricted systematical examinations of the aged are the means to study if and how it is possible to trace chronic disease of which there is no awareness and which with timely treatment has an improved prognosis as to life expectancy or ability.

=====AGED PEOPLE

title A study among the aged II
investigator C. Schouwstra, Philips Medische
 Dienst, Eindhoven
duration 1975-1976
publication Schouwstra, C.
 A study among the aged, I and II,
 1977 (reports)

abstract-----

Do periodical, purposive examinations of the aged enable the doctor to find disorders which otherwise would not be found at all or at a less favourable time?

=====PSYCHO-SOCIAL PROBLEM

title The consequences of abandonment
 through divorce or bereavement

investigator C. Schouwstra, W. Zwanikken, H.
 Weyenburg a.o., Philips Medische
 Dienst, Eindhoven

duration 1977-1979

publication Plooi, E.
 Divorce, a literature search and
 study of the consequences of
 divorce; how people cope with it
 and the possibilities of pro-
 fessional help by primary care
 workers, 1977;
 Konnijsveld, B., E. Plooi, H.
 Weyenburg
 A study of the consequences of
 abandonment through divorce or
 bereavement, 1977;
 Verhagen, J., H. Levelink, F.
 Heynen
 A study of the consequences of
 abandonment through divorce or
 bereavement, 1977 (internal reports)

abstract-----
The problems and needs of those involved, as far as
the general practitioner may act upon his recognition
of them.

=====PSYCHO-SOCIAL PATIENT CARE

title At the front line of psychic health care

investigator J.H. Swarte, C.M. Hosman, Psychologisch Laboratorium, Katholieke Universiteit, Nijmegen

duration 1973-1977

publication Hosman, C.M., J.H. Swarte
part I: Primary care workers facing psychic problems, 1973;
part II: What do primary care workers do when they are faced with psychic problems? 1973 (reports)

abstract_____

The line of action taken by general practitioners, district nurses, social workers, pastors and school principals in the process of assistance as part of psychic health care.

=====FUNCTIONAL COMPLAINTS

title Climacterium

investigator J.G. Zeijlmans, Nederlands Instituut voor Sociaal Sexuologisch Onderzoek, Zeist

duration 1972-1976

publication Zeijlmans, J.G.
The climacterium, 1977 (thesis)

abstract_____

A study of the knowledge and point of view regarding the climacterium among Dutch women aged 30-40. A study of the relationship between point of view and a number of factors (sociological, sexual, economic etc.)

- c. In respect of the treatment of specific complaints
 - c.1. Cardiovascular disease

=====HOME CARE

title An explorative study of the role of
 the general practitioner in the
 follow-up care for patients who
 suffered a heart attack

investigator F.J.M. Ancion, A.A. Coster, Rijks-
 universiteit Leiden, Vakgroep
 Huisartsgeneeskunde, Leiden

duration 1976-1977

publication Ancion, F.J.M., A.A. Coster
 An explorative study of the role of
 the general practitioner in the
 follow-up care for patients who
 suffered a heart attack, 1977
 (report)

abstract-----
No further information available.

=====FUNCTIONAL COMPLAINTS

title Psychological prodromata

investigator A. Appels, Erasmus Universiteit,
 afdeling Preventieve Psychiatrie

duration 1974-1977

publication Appels, A., J. Pool, W. Lubsen a.o.
 Psychic prodromata to the heart
 attack, Nederlands Tijdschrift voor
 de Psychologie 4 (1979) pp. 213 ff

abstract-----
Tracing the emotions that precede a heart attack.

=====FUNCTIONAL COMPLAINTS

title A study of the opportunities of measuring risk factors with regard to coronary heart disease in a single-handed general practice
investigator C.P.M. Boot, Den Haag
duration 1976-1978
publication Boot, C.P.M.
Risk factors with regard to coronary heart disease: screening and prophylaxis in a general practice, 1979 (thesis)

abstract-----
Testing the practical use of the guidelines issued by the European Society of Cardiology for the detection and reduction of risk factors.

=====FUNCTIONAL COMPLAINTS

title An attempt to show that persons of low physical performance are coronary high-risk patients and have high rates of absence from work
investigator H.J. Dalhuizen, Zoetermeer
duration 1978 - on its way
publication No publication available

abstract-----
No further information available.

=====PATIENT REGISTRATION

title IMIR: Imminent Myocardial
Infarction at Rotterdam

investigator E. van de Does, J. Pool, Instituut
voor Huisartsgeneeskunde, Rotter-
dam

duration 1972-1977

publication Does, E. van de, J. Lubsen
Acute coronary events in the general
practice: the Imminent Myocardial
Infarction at Rotterdam, 1978,
Volume I, text
Volume II, tables and figures
(reports);
Article in Hartbulletin, June 1976

abstract-----
In 1974 the intake of patients with specific patterns
of complaints was terminated. Follow-up (making use
of anamnestic, E.C.G. and enzyme findings) covered the
whole year. For all of the data the patient pool in
its entirety was coded and prepared for computer
processing.

=====FUNCTIONAL COMPLAINTS

title Analysis of the therapeutic effect
 of hypertension treatment in the
 general practice

investigator E. van de Does, J.P. Bekker, A.
 Prins, Instituut voor Huisartsge-
 neeskunde, Rotterdam

duration 1978 - on its way

publication Bekker, J.P., A. Prins
 Lowered blood pressure after
 intervention by the general prac-
 titioner as part of hypertension
 screening, Huisarts en Wetenschap
 24 (1981) pp. 177-182

abstract_____

Answering the question: 'To what extent can the total effect on the blood pressure in people treated by way of an existing scheme for hypertension detection and treatment by the general practitioner be assigned to the therapeutic intervention?'

=====DIAGNOSTIC CENTRE

title TRACE: Town of Rotterdam Coronary
Events programme

investigator E. van de Does, J. Lubsen, J. Pool,
R. Brons a.o., Instituut voor Huis-
artsgeneeskunde, Rotterdam

duration 1978 - on its way

publication Brons, R.
Diagnostic assistance for the
general practitioner in the case of
ischemic heart disease, Medisch
Contact 26 (1981) pp. 793-794;
a thesis is being prepared (1983)

abstract-----

The evaluation of a diagnostic service enabling
general practitioners to have an E.C.G. with expert
opinion on it and enzyme determinations within a day.

=====FUNCTIONAL COMPLAINTS

title The general practitioner and
hypertension, a challenge

investigator A. van der Feen, Goes

duration 1974-1978

publication Feen, A. van der
Hypertension, a challenge, Huisarts
en Wetenschap 18 (1975) pp. 406-411;
Repeat examinations after screening
for hypertension in the general
practice, Huisarts en Wetenschap 19
(1976) pp. 266-268

abstract-----

The detection, further following or, as the case may
be, examination and the treatment of hypertension for
the whole 30-60 age group in a general practice by
means of screening procedures.

=====FUNCTIONAL COMPLAINTS

title Single-blind study of the long-term
 effects of the treatment of moderate
 hypertension

investigator Gezondheidscentrum Hoensbroek,
 Hoensbroek

duration 1976-1978

publication None are available

abstract_____

A study to ascertain whether treating moderate
hypertension is of any use in view of the long-term
morbidity and mortality.

=====FUNCTIONAL COMPLAINTS

title An inventorizing examination of the
 manner of renewed integration at
 work following a heart attack

investigator J. Jong, J. Diederiks, Commissie
 Arbeidsgeneeskundig Onderzoek,
 Leiden

duration 1975-1980

publication Jong, J., J. Diederiks
 An inventorizing examination of
 the manner of renewed integration
 at work following a heart attack,
 1980 (report)

abstract_____

Studying the influence of rehabilitation efforts on
the resumption of duties following a heart attack.

=====SCREENING

title A scrutiny of mass screening
investigator J.F.J. Jonkers, J.F.M. Thomassen,
 Huisartsen Instituut der Vrije
 Universiteit, Amstelveen
duration 1977-1979
publication No publication available

abstract_____

A quantitative and qualitative analysis of the contribution made by screening procedures to the detection of ischemic heart disease.

=====FUNCTIONAL COMPLAINTS

title GP post-graduate project concerning
 the combating of cardiovascular
 disease
investigator E. van de Lisdonk, W. van den Bosch,
 J. Gabeler, Nijmeegs Universitair
 Huisartsen Instituut, Nijmegen
duration 1978-1980
publication Lisdonk, E. van de, W. van de Bosch,
 J. Gabeler
 GP post-graduate project: the
 research protocols, 1979 (report)

abstract_____

The investigation deals with the following questions:
1. What differences are there between the help actually given by general practitioners in combating cardiovascular disease on the one and a number of criteria laid down for this on the other

hand?

2. What causes may be pointed out to explain the differences found between the actual attention to cardiovascular disease and the criteria laid down in this respect?
3. Can a post-graduate programme be devised for the removal of the causes of differences between the help actually given in the case of cardiovascular disease and the criteria laid down in this respect?

=====SCREENING

title Screening for high-risk factors,
 followed by surveillance of the
 high-risk groups with regard to
 cardiovascular disease, mamma
 carcinoma and cervix carcinoma

investigator H. Markus, Nijmeegs Universitair
 Huisartsen Instituut, Nijmegen

duration 1976-1978

publication No publication available

abstract_____

A study to ascertain whether with the anticipatory procedure as in the title better results are obtained than with mass screening.

=====PREVENTION

title The prevention of myocardial
 infarctions

investigator L.M. Meyer, Heerlen

duration 1977-1980

publication No publication available

abstract-----
 Alternatives in theory and practice.

=====SCREENING

title Does screening increase anxiety?

investigator J.W. van Ree, G. van Mierlo,
 Nijmeegs Universitair Huisartsen
 Instituut, Nijmegen

duration 1977-1980

publication Ree, J.W. van
 The Nijmegen intervention project,
 1981 (thesis)

abstract-----
 The question is considered whether the screening
 programme for cardiovascular disease as it is carried
 out in the Nijmegen intervention project produces a
 negative effect on the feelings of the investigated
 population.

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title An examination of the doctor-patient
 relationship

investigator A. Nievaard, Rijksuniversiteit
 Leiden, Sociologisch Instituut,
 Leiden

duration 1974-1977

publication No publication available

abstract_____

The study concerns the question whether identity changes in heart patients are related to particular forms of conforming behaviour in respect of medical instructions.

=====SCREENING

title Screening for hypertension among
 people in the 20-50 age group

investigator A. Prins, Gezondheidscentrum Krimpen
 aan de IJssel

duration 1976-1980

publication Prins, A.
 Hypertensive people and their
 willingness to have blood pressure
 checked. A screening procedure in
 Krimpen aan de IJssel, on the
 initiative of the health centre,
 Nederlands Tijdschrift voor Genees-
 kunde 124, 19 (1980) pp. 723-726

abstract_____

Hypertensive people and their willingness to have blood pressure checked: a population survey in Krimpen aan de IJssel on the initiation of the local health

centre.

=====FUNCTIONAL COMPLAINTS

title Nijmegen Intervention Project (NIP)
investigator J. van Ree, Nijmeegs Universitair
Huisartsen Instituut, Nijmegen
duration 1977-1980
publication Ree, J. van
The Nijmegen Intervention Project,
1981 (thesis)

abstract-----
An analysis and description of the possibilities of
tracing and treating risk factors in regard of
cardiovascular disease in the general practice.

=====FUNCTIONAL COMPLAINTS

title The Nijmegen Intervention Project -
component study
investigator J. van Ree, Nijmeegs Universitair
Huisartsen Instituut, Nijmegen
duration 1977-1980
publication Ree, J. van
The Nijmegen Intervention Project,
1981 (thesis)

abstract-----
Among a population of approximately 10,000 persons
from six general practices the extent is studied to
which a screening and intervention programme intended
for cardiovascular disease risk factors can be carried
out in the general practice.

=====PREVENTION

title The prevention of cardiovascular
 disease in the general practice

investigator J. van Ree, Nijmeegs Universitair
 Huisartsen Instituut, Nijmegen

duration 1980 - on its way

publication Ree, J. van
 1. The Nijmegen Intervention Project
 1981 (thesis); The general prac-
 titioner and screening for
 cardiovascular disease, Bio-
 wetenschappelijke Cahiers, 481
 (1981) 7, 3, pp. 45-51;
 2. Systematical detection and
 treatment of risk factors can be
 done in the general practice,
 Hartbulletin, 12 (1981) 3,
 pp. 69-76;
 3. Investigation concluded: the
 Nijmegen Intervention Project,
 Tijdschrift voor Sociale Genees-
 kunde 59 (1981) 25, p. 60

abstract_____

In how far will the results obtained in the Nijmegen
Intervention Project in counteracting risk factors
be maintained since the extra assistance for the
purpose of the intervention project is no longer
available?

=====FUNCTIONAL COMPLAINTS

title Blood pressure examinations for hypertension in Heer

investigator A. Seelen, Rijksuniversiteit Limburg Medische Faculteit, Capaciteitsgroep Huisartsgeneeskunde, Maastricht

duration 1974-1981

publication No publication available

abstract-----
The development of methods for screening and treating hypertension making use of the existing facilities together with an estimate of the value of the hypertension angle.

=====FUNCTIONAL COMPLAINTS

title The care for cardiovascular risk factors

investigator A. Seelen, Rijksuniversiteit Limburg, Medische Faculteit, Capaciteitsgroep Huisartsgeneeskunde, Maastricht

duration 1974-1981

publication Seelen, A. Identification of cardiovascular risk factors in a general practice, Huisarts en Wetenschap 23 (1980) pp. 325-337

abstract-----
No further information available.

=====FUNCTIONAL COMPLAINTS

title Supervisory care for heart attack
 patients in primary health care

investigator P. Stalenhoef, L. Lodewich, F. van
 der Horst, Rijksuniversiteit Lim-
 burg, Medische Faculteit, Capaci-
 teitsgroep Huisartsgeneeskunde,
 Maastricht

duration 1978 - on its way

publication Stalenhoef, P., L. Lodewich, F. van
 der Horst
 Stimulating supervisory care for
 heart attack patients in primary
 health care, forthcoming (October
 1982, report)

abstract-----
Following an inventorizing pilot study which points
out the difficulties and impediments in the present
care for heart attack patients, the objects are to
develop a set of methods and the initiation of a
system of supervisory care for these patients and the
persons nearest to them.

=====DIAGNOSTICS

title Diagnosis and treatment of increased
 blood pressure in the general
 practice

investigator W.A. van Veen, Huisartsen Instituut
 der Vrije Universiteit, Amstelveen

duration 1974-1977

publication Veen, W.A. van
 Treating hypertension with
 chloorthalidon, Huisarts en Weten-
 schap 21 (1978) pp. 300 ff

abstract-----
An inventory of relevant data collected by others,
and an estimate and tests of its usefulness in the
general practice.

=====FUNCTIONAL COMPLAINTS

title Hypertension screening focusing on
 the iatrogenic and social harm of
 the label implied in the diagnosis

investigator C. van Weel, Gezondheidscentrum
 Ommoord, Rotterdam

duration 1976-1977

publication Weel, C. van
 Hypertension, a question of measure-
 ment and balancing, Huisarts en
 Wetenschap 21 (1978) pp. 370-374

abstract-----
No further information available.

=====FUNCTIONAL COMPLAINTS

title Intervening in cardiovascular
 disease

investigator D. Zwagers, Aalden

duration 1976-1979

publication No publication available

abstract-----
Examining the risk groups; repeat examinations after
intervention.

c.2. Other chronic illnesses

=====CHRONIC PATIENTS

title Improving primary care for diabetics
investigator J. Berkhout, F. van der Horst,
Rijksuniversiteit Limburg, Medische
Faculteit, Capaciteitsgroep Huis-
artsgeneeskunde, Maastricht
duration 1975-1981
publication Berkhout, J., F. van der Horst
Follow-up in primary care for
diabetes, 1980 and 1981 (reports)

abstract_____

The study provides information as to whether a well-organized separate surgery for diabetes patients in primary care leads to improved health care for diabetics.

=====CHRONIC PATIENTS

title Morbidity study among patients with
chronic non-specific lung diseases
(CARA)
investigator Home Team Centre, Gezondheidscentrum
De Schelp, Swifterbant
duration 1981 - on its way
publication No publication available

abstract_____

During a one-year period all of the asthmatic patients on the practice list (approx. 200 to 4200 patients) record their subjective complaints of shortness of breath, in order to find evidence for the GP's impression that such patients' complaints are more frequent during the months of July, August and September.

=====FUNCTIONAL COMPLAINTS

title A study of the incidence of
 asymptomatic bacilluria in children
 and its possible consequences

investigator J. Haag, Instituut voor Huisarts-
 geneeskunde, Rotterdam

duration 1972-1977

publication Thesis, 1977

abstract-----
No further information available.

=====CHRONIC PATIENTS

title The diagnostics of urinary tract
 infections

investigator R.J. Holhuis, Nuenen

duration 1971-1973

publication Ceased without publications

abstract-----
A comparison of various methods and a study of the
use of the various disciplines;
1. epidemiology of urinary tract infections;
2. an investigation of the long-term prognosis of
 urinary tract infections.

=====ALTERNATIVE MEDICINE

title The range of application of
 acupuncture in the general practice
 in the case of chronic disorders

investigator P. Kerkhof, A. van Oosten, Rijks-
 universiteit Limburg, Medische
 Faculteit, Capaciteitsgroep Huis-
 artsgeneeskunde, Maastricht

duration 1978-1980

publication No publication available

abstract-----
Can any effects of acupuncture in the case of chronic
pain be shown to exist by means of a single-blind
experiment? Is there any relation between such an
effect and personality variables?

=====CHRONIC PATIENTS

title The problem of chronic non-specific
 long diseases (CARA)

investigator T. Lau-IJzerman, Provinciale Raad
 voor de Volksgezondheid Noord-
 Holland, Haarlem

duration 1975-1976

publication Lau-IJzerman, T.
 The problem of chronic non-specific
 long diseases (CARA), 1976 (report)

abstract-----
An orientation as to the possibilities of detecting
and helping persons with chronic aspecific respiratory
disorders.

=====FUNCTIONAL COMPLAINTS

title The collection of a number of data
 about patients who present the
 general practitioner with the
 complaint of 'thirst'

investigator J.D. Mulder, Gezondheidscentrum
 Wantveld, Noordwijk aan Zee

duration 1971-1973

publication In: J.T. Buma
 Observation in health care,
 Nijmegen, 1982

abstract-----
A questionnaire was part of the procedure.

=====CHRONIC PATIENTS

title The detection of unknown glycosurias

investigator J.D. Mulder, Gezondheidscentrum
 Wantveld, Noordwijk aan Zee

duration 1972-1973

publication No publication available

abstract-----
Urine examinations with the help of 'clinstix' for
the purpose of detecting unknown diabetics among
women aged 25-60 who co-operate in a screening
through smears survey for cervix carcinoma.

=====CHRONIC PATIENTS

title Limited morbidity registration

investigator J.D. Mulder, B. de Beer, Gezondheidscentrum Wantveld, Noordwijk aan Zee

duration 1980 - on its way

publication No publications; the findings are regularly used by others for research and educational purposes

abstract

Approx. 30 chronic disease patterns are put on record. The findings that are most used are:

1. HB levels in gastric resection patients who are regularly given B12;
2. Early detection of hypothyroidism in strumectomy patients by means of T4 determination;
3. Determination of the diabetes frequency.

=====DECISION THEORY

title The general practitioner's decision model in respect of bronchial carcinoma

investigator C. Spreeuwenberg, J.C. van Es, K. Gill, Universitair Huisartsen Instituut, Utrecht

duration 1980 - on its way

publication Spreeuwenberg, C., J.C. van Es, K. Gill
Diagnostics of the bronchial carcinoma in the general practice, submitted to Huisarts en Wetenschap (1982)

abstract

Devising a decision model for the general practitioner in respect of his policy regarding bronchial carcinoma.

=====CHRONIC PATIENTS

title Epileptic children: professional
 help and referrals

investigator H. van der Baan, T.P.B.M. Suurmeyer,
 Rijksuniversiteit Groningen Vakgroep
 Medische Sociologie, Groningen

duration 1980-1982

publication Baan, H. van der
 Epileptic children: professional
 help and referrals, November 1980
 (report);
 Baan, H. van der, T.P.B.M. Suur-
 meyer
 Referring epileptic children,
 Medisch Contact 12 (1982) pp. 349-
 354

abstract_____

Causes and effects of the nature of the professional
help and referrals given by doctors to the parents
of-epileptic children.

=====CHRONIC PATIENTS

title Chronic disorders in the general
 practice

investigator Th. Voorn, Nijmeegs Universitair
 Huisartsen Instituut, Nijmegen

duration 1975-1979

publication No publication available

abstract_____

A description of treatment policy for chronic
disorders of frequent occurrence in the general
practice.

=====PRACTICE ORGANIZATION

title Determining resistance at room
 temperature to supplement the
 uricult method

investigator M. Vos, Gezondheidscentrum Hoens-
 broek, Hoensbroek

duration 1974-1978

publication No publication available

abstract-----
A study to ascertain whether dipslides prepared with
an antibiotic provide a reliable test of any
resistance that may exist.

=====DIAGNOSTIC

title A comparative study of the results
 of sediment and uricult tests in
 the general practice

investigator C. Wachters-Kaufmann, K.J. van Deen,
 a.o., Rijksuniversiteit Groningen,
 afdeling Huisartsgeneeskunde,
 Groningen

duration 1974-1978

publication No publication available

abstract-----
A study of the value of a urine sediment as compared
to 'uricult' for every indication.

=====FUNCTIONAL COMPLAINTS

title Measurements with regard to
 pulmonary physiology in the general
 practice, a functional development

investigator C.B. van Woerden, Hoogvliet

duration 1979-1980

publication No publication available

abstract_____

What numbers of manifest patients with chronic non-specific long diseases (CARA) are found in a general practice? How many general practitioners use function measuring of the lungs and what methods can be employed? What is the potential future developments?

c.3. Psychosomatic complaints

=====PSYCHO-SOCIAL PROBLEMS

title Psychological elements in headaches
investigator H.J. Dokter, M. van Trommel,
Erasmus Universiteit, Rotterdam
duration 1974-1976
publication Ceased without publication

abstract-----
Making use of a number of interviews with patients
who suffer from headaches, a hypothesis can be
developed which will require further investigation.

=====FUNCTIONAL COMPLAINTS

title A questionnaire concerning vague
complaints
investigator M. de Haan, Huisartsen Instituut der
Vrije Universiteit, Amstelveen
duration 1979-1981
publication No publication available

abstract-----
What views do people take of vague complaints and the
desired conduct in the case of vague complaints? Do
any differences show between general practitioners
and others?

=====PROFESSIONAL HELPER - PATIENT RELATIONSHIP

title On what grounds does the general practitioner realize that other than purely somatic complaints have come into play?

investigator J. Heres, Rijksuniversiteit Groningen, afdeling Huisartsgeneeskunde, Groningen

duration 1973-1977

publication No publication available

abstract_____

Recognizing as such the variables (and their interdependence) that are crucial to the process of doctor-patient contacts.

=====FUNCTIONAL COMPLAINTS

title The prevention of tiredness in the general practice

investigator C. Hougee, Hellevoetsluis

duration 1978 - on its way

publication No publication available

abstract_____

In the investigator's own practice and those of fellow-practitioners the line taken by general practitioners with regard to the complaint of 'tiredness' is studied, as well as the questions whether they adopt a purely somatic approach or also work along psychomatic lines, and in how far they allow the patient a say about further examinations and treatment.

=====PSYCHO-SOCIAL PROBLEMS

title Psychic disorders in a general
 practice

investigator A.Th. van de Loght, Nijmeegs
 Universitair Huisartsen Instituut,
 Nijmegen

duration 1972-1981

publication No publication available

abstract-----
In the first place an analysis is made of particulars concerning the presentation of psychic disorders and nervous functional complaints in a single-handed practice. Next the findings are related to a few psycho-social characteristics of the persons who present the complaints.

=====PSYCHO-SOCIAL PROBLEMS

title A comparison of psycho-social
 problems mentioned by the general
 practitioner and those mentioned
 by the patient

investigator H.C. Mulder, Rijksuniversiteit
 Groningen, Vakgroep Medische So-
 ciologie, Groningen

duration 1976-1979

publication Mulder, H.C.
 Does the general practitioner know
 the patient? 1979 (report)

abstract-----
No further information available.

=====PSYCHO-SOCIAL PROBLEM

title An initiative to achieve a
 prognostics of nervous functional
 complaints (diffuse complaints)

investigator W. Neefs, Rijksuniversiteit Limburg,
 Medische Faculteit, Capaciteits-
 groep Huisartsgeneeskunde, Maas-
 tricht

duration 1975-1978

publication Ceased without publication

abstract-----
The construction of an instrument, also testing its
epidemiological application, and the improvement of
patient care are the objectives.

=====PSYCHO-SOCIAL PROBLEM

title Social inequality and psychic
 disorders

investigator G. Nijhof, Erasmus Universiteit,
 Instituut voor Preventieve en So-
 ciale Psychiatrie, Rotterdam

duration 1972-1979

publication Nijhof, G.
 Social inequality and psychic
 disorders, 1979 (thesis)

abstract-----
An investigation of the relation between stratum-
linked stressors of a social type and psychic
disorders.

=====PSYCHO-SOCIAL PROBLEM

title The implications of fear of serious disease in the general practice

investigator T.H.M. Postma, Instituut voor Huisartsgeneeskunde van de Universiteit van Amsterdam, Amsterdam

duration 1978 - on its way

publication Postma, T.N.M.
Patients who present with somatization in the general practice, Huisarts en Wetenschap 24 (1981) pp. 169-176

abstract_____

Fear of death and/or serious disease felt by the patient is one of the chief determinants for the decision to visit the general practitioner.

=====PSYCHO-SOCIAL PROBLEM

title A psycho-social characterization of patients with diffuse complaints

investigator H.C. Schouwenburg, Instituut voor Huisartsgeneeskunde van de Universiteit van Amsterdam, Amsterdam

duration 1974-1976

publication Loon, T.J.P. van, H.C. Schouwenburg
Personality features of patients with diffuse physical complaints, Nederlands Tijdschrift voor Psychologie 32 (1977) pp. 81-99

abstract_____

A study aiming at some understanding of the differences between on the one hand patients who have diffuse complaints and psycho-social problems and on the other hand patients with psycho-social problems and no diffuse complaints.

=====DIAGNOSTIC

title The diagnostic of vague physical
 complaints

investigator H.C. Schouwenburg, Instituut voor
 Huisartsgeneeskunde van de Univer-
 siteit van Amsterdam

duration 1976-1979

publication Ceased without publication

abstract-----
Part of the somatization project: an analysis of the
way in which general practitioners reach the
diagnosis of 'somatization' or 'vague complaints'.

=====PSYCHO-SOCIAL PROBLEM

title Problem patients in primary care;
 diagnosis and treatment

investigator H.C. Seur, Katholieke Hogeschool,
 Vakgroep Klinische Psychologie en
 Psychotherapie, Tilburg

duration 1975-1977

publication Seur, H.C.
 Problem patients in primary care,
 De Psycholoog 12 (1977) pp. 45-67

abstract-----
1. Who are problem patients?
2. What are the psychological characteristics?
3. Which is the best form of therapy?

=====PSYCHO-SOCIAL PROBLEM

title Hyperventilation in the general
 practice; a pilot study

investigator B. Terluin, Delft

duration 1978 - on its way

publication No publication available

abstract-----

1. Description of hyperventilation in the general practice (age and sex distribution, underlying problems etc.)
2. The results of treatment by the general practitioner after 1½-2 years.

=====DECISION THEORY

title The significance of the premedical
 stage for surgery contacts between
 general practitioner and patients
 with vague physical complaints

investigator C. IJzermans, Instituut voor Huis-
 artsgeneeskunde van de Universiteit
 van Amsterdam, Amsterdam

duration 1979 - on its way

publication No publication available

abstract-----

No further information available.

c.4. Obstetrics

=====OBSTETRICS

title General practitioner and obstetrics

investigator J. van Eijk, F.J.A. Huygen, Th.
Voorn, Nijmeegs Universitair Huis-
artsen Instituut, Nijmegen

duration 1977-1978

publication Huygen, F.J.A., J. van Eijk, Th.
Voorn
General practitioner and obstetrics
in the Netherlands;
part I: Figures and opinions,
Medisch Contact 29 (1979)
pp. 925-928;
part II: Investigation among general
practitioners, Medisch Con-
tact 30 (1979) pp. 953-957

abstract-----

In a series of research training terms the theme of
'confinement at home or in hospital' is reviewed.

=====OBSTETRICS

title The frequency of pathology in home
deliveries

investigator L.F.C. Hamann, Ede

duration 1974-1977

publication Ceased without publication

abstract-----

Finding evidence for the advantages of hospital
births.

=====CONTRACEPTION

title Male - female contraception project

investigator J.P. Moors, W.J. de Graaf, T.M. Willemsen a.o., Nederlands Huis-artsen Genootschap, Utrecht

duration 1871-1971

publication

1. Graaf, W.J. de, T.M. Willemsen
General practitioner and
contraception, a study of the
behaviour of general prac-
titioners in the Leiden Area in
respect of birth control advice;
2. Willemsen, T.M., B. van Gelder
Contraception post-graduate
courses, an evaluation of the
training project: birth control
in practice;
3. Vries, L. de, R. v.d. Water
Conversations with forty general
practitioners about contraception
and post-graduate training - an
exploratory investigation on
membership or not of the 'birth
control in practice' courses
(reports)

abstract

The way in which the level of the general practitioner's knowledge of contraception can be raised by the attitude regarding contraception be adjusted. The reasons for either not using contraception or applying for an abortion.

=====OBSTETRICS

title The influence of obstetric action on
 the course run by pregnancy and
 birth

investigator H.O. Sigling, Huisartsen Instituut
 der Vrije Universiteit, Amstelveen

duration 1978 - on its way

publication Sigling, H.O., F.L. van Duyn, J.F.M.
 Thomassen
 Birth, a natural event. A
 theoretical description of the role
 of the obstetrician and midwife
 (report)

abstract_____

A study of any differences that may be presented by
on principle normal pregnancies if obstetric care is
provided by obstetricians/midwives with divergent
points of view standpoints.

=====CONTRACEPTION

title A changing contraception

investigator A.J.B.I. Sips, Nijmeegs Universitair
 Huisartsen Instituut, Nijmegen

duration 1980-1981

publication Sips, A.J.B.I.
 Changing contraception, January
 1981 (thesis)

abstract_____

The first question concerns the methods of birth
control that are in current use. Next comes a study
of any changes that may have occurred over the years.
Have sterilization opportunities been of any
influence in this respect?

=====OBSTETRICS

title Obstetrics and gynecology in the
 general practice

investigator A.C.P.J. Waverijn, Rijksuniversiteit
 Leiden, Vakgroep Huisartsgeneeskun-
 de, Leiden

duration unknown - 1980

publication No publication available

abstract_____

Morbidity registration during one year concerning
all of the obstetric and gynecological problems in
a general practice.

c.5. Various

=====MORTALITY

title 'They were mine'
investigator L.P. Akkersdijk, Hilversum
duration 1971-1979
publication No publication available

abstract _____
A study of deceased patients in twenty years of
general practice, verified against the GP's duties.

=====FUNCTIONAL COMPLAINTS

title An exploratory investigation of the
problems met with by general prac-
titioners in the case of patients
who have defecation disorders, of
their conduct of such cases and the
methods adopted
investigator F.J.A.M. Ancion, A.A. Coster, Rijks-
universiteit Leiden, Vakgroep Huis-
artsgeneeskunde, Leiden
duration 1976-1977
publication Ancion, F.J.A.M., A.A. Coster
Exploratory investigation of the
problems of patients with defecation
disorders, 1977 (report)

abstract _____
No further information available.

=====FUNCTIONAL COMPLAINTS

title The significance of criteria for
urologic tests in the case of
urinary tract infections in the
general practice

investigator P.J.A.M. Baselier, Nijmeegs Univer-
sitair Huisartsen Instituut, Nijme-
gen

duration 1978-1982

publication A thesis is being prepared (1982)

abstract-----
Considering the results, referrals by the general
practitioner of patients who present with acute
urinary tract infections tend to be needless. The
hypothesis is that with such infections a brief
intervention in the biotic factors and the
demonstration of antibody coating if such exists can
provide better indications for the need of referring.

=====COLLABORATION

title Process description and evaluation
of the neighbourhood welfare centre
in Afrikaanderwijk district

investigator P. Beek, T. Hak, Erasmus Universi-
teit, afdeling Preventieve en
Sociale Psychiatrie, Rotterdam

duration 1973-1976

publication No publication available

abstract-----
No further information available.

=====PSYCHO-SOCIAL PATIENT CARE

title Psycho-social help with mamma
 amputation

investigator C.M. Brederode-Ritter, M. Floor,
 Nederlands Instituut voor Sociaal
 Sexuologisch Onderzoek, Zeist

duration 1976-1977

publication Brederode-Ritter, C.M., M. Floor
 If one of your breasts is taken
 away....; experiences of women and
 professional helpers, 1977 (book)

abstract-----
The collection of data for a discussion intended to
improve the said help.

=====SCREENING

title Diseases imported from Surinam:
 screening in the general practice

investigator P.H. Breedveld, Amsterdam

duration 1972-1976

publication No publication available

abstract-----
Fecal and blood tests for helminthiases and hemoglobin
disease among the Surinamese.

=====GROUP THERAPY

title A comparative study of individual
 and group programmes for weight loss
 in the Feyenoord general practice

investigator G. Dorrenboom, N.A.M. Schoemaker-
 Hol, N.E. Stegeman, D. Huisman,
 Gezondheidscentrum Feyenoord,
 Rotterdam

duration 1974-1980

publication Dorrenboom, G.
 Losing weight in Feyenoord, I,
 1980;
 Stegeman, N.
 idem II, 1980

abstract

An attempt to establish which method (general practitioner's, dietician's or group) gives the best results in the long run as to somatic, psychic and social aspects.

=====DIAGNOSTIC

title Minor illnesses and disorders in the
general practice

investigator H.J.P.M. Dijkhuis, A.J. Meurs, J.
Theunissen, Rijksuniversiteit, Lei-
den, Vakgroep Huisartsgeneeskunde,
Leiden

duration 1979 - on its way

publication 1. Cate, R.S. ten
Minor ailments in the general
practice;
2. Meurs, A.J.
Conjunctivitis;
3. Mulder, J.D.
Whiplash or tennisleg;
4. Spronsen, R. van
Fetor ex ore: halitosis;
in: Boerhaave cursusgids: Vorde-
ringen, December 1981

abstract_____

The study concerns the question whether minor ailments
are analysed and treated in the right way.

=====GENERAL MEDICIN

title Assessing disablement independently
of the diagnosis (groundwork)

investigator H.J.P.M. Dijkhuis, Rijksuniversiteit
Leiden, Vakgroep Huisartsgeneeskunde,
Leiden

duration 1973-1977

publication Ceased without publication

abstract_____

Devising reliable scales.

=====GENERAL PRACTICE

title Ability examinations
investigator H.J.P.M. Dijkhuis, Rijksuniversiteit
Leiden, Vakgroep Huisartsgeneeskunde,
Leiden
duration 1974-1977
publication No publication available
abstract-----
Assessing the ability of the patients in a general
practice independently of the diagnosis.

=====TERMINAL CARE

title The death-bed
investigator D. Frowein, Den Haag
duration 1975-1978
publication No publication available
abstract-----
The duration of the death-bed; medical and
psychological aspects of the attendance to terminal
patients at home.

=====MORTALITY

title Mortality figures in a 25-year
general practice

investigator J. Goedhart, Philips Medische
Dienst, Eindhoven

duration 1976-1979

publication Ceased without publication

abstract_____

No further information available.

=====FUNCTIONAL COMPLAINTS

title The general practitioner and low
back pain

investigator G.R. Hoekstra, Rijksuniversiteit
Groningen, afdeling Huisartsgenees-
kunde, Groningen

duration 1977-1982

publication Hoekstra, G.R.
Patients with low back pain in a
general practice, (thesis under
preparation, 1982)

abstract_____

On the basis of the card file in a general practice it is investigated whether in retrospect predictors can be found for distinguishing patients consulting for the first time with the complaint of low back pain and who keep coming, and those who don't.

=====COLLABORATION

title Evaluating project-interaction
 groups
investigator J. Hoogwegt, Gezondheidscentrum
 Wantveld, Noordwijk aan Zee
duration 1975-1977
publication Student's paper

abstract-----
1. A study of the effect a group has on its members
2. The development of a suitable method of evaluating
3. An inquiry into the extent to which the health
 centre staff is familiar with the groups.

=====FUNCTIONAL COMPLAINTS

title Otitis media in the general
 practice
investigator J. van Hooidonk, Gouda
duration 1978 - on its way
publication A thesis will be published in 1986

abstract-----
No further information available.

=====HEALTH GUIDANCE AND EDUCATION

title Health guidance for parents of young children
investigator P.P.J. Houben, Instituut voor Psychologisch Marktonderzoek, Schiedam
duration 1972-1976
publication No publication available

abstract-----
By way of group discussions and open-ended interviews among, and a questionnaire submitted to parents of young children and a few categories of instructors, an attempt is made to gain insight in the need for guidance with several purposes in view, including an evaluation of the mother courses.

=====EARLY DIAGNOSING

title Early detection of hearing disorders
investigator F. van Laar, Nederlands Instituut voor Preventieve Gezondheidszorg, Leiden
duration 1971-1977
publication Laar, F. van
Early detection of hearing disorders, 1976 (report)

abstract-----
No further information available.

=====FUNCTIONAL COMPLAINTS

title Adipose patients in the general
 practice

investigator K. van der Meer, Rijksuniversiteit
 Groningen, afdeling Huisartsgenees-
 kunde, Groningen

duration 1973-1979

publication No publication available

abstract_____

Tracing differences between adipose people and non-
adipose people on the basis of a number of personality,
social and somatic characteristics, as well as any
causes for the differences, in order to provide
them with adequate professional help.

=====FUNCTIONAL COMPLAINTS

title Febrile children in the general
 practice

investigator K. van der Meer, Rijksuniversiteit
 Groningen, afdeling Huisartsgenees-
 kunde, Groningen

duration 1973-1980

publication No publication available

abstract_____

Making use of practice situations, the object is to
elaborate a line of action in respect of children
with a fever.

=====FUNCTIONAL COMPLAINTS

title Prevention and recognition of the irritable bowel syndrome in the general practice

investigator H.M. Meijer, Instituut voor Huisartsgeneeskunde van de Universiteit van Amsterdam, Amsterdam

duration 1978 - on its way

publication Meijer, H.M.
The irritable bowel syndrome: a useful concept for the general practitioner, Huisarts en Wetenschap 24 (1981) pp. 214-221

abstract_____

No further information available.

=====FUNCTIONAL COMPLAINTS

title One year of back pain

investigator Meijer en Ruhe, Hilvarenbeek

duration 1972-1973

publication No publication available

abstract_____

A study of the numbers of persons who in one year consulted the general practitioner for back pain, the response of the general practitioner, the examinations he did or had done, his interpretation and treatment of the complaints and the results.

Guidelines were devised for this, aiming in particular at an uniform approach: what is done upon first contact and what continuation is there in the case of persistent complaints? The object is to achieve a better understanding, partly through a literature search, of the problems by means of description, labeling and discussion of difficulties and successes

encountered.

=====FUNCTIONAL COMPLAINTS

title Glandular fever and the 'monosticon
test'

investigator J.P.C. Moors, Rosmalen

duration 1973-1975

publication No publication available

abstract-----
A study of the 'monosticon test'. Is glandular fever
indicated if the test result is positive?

=====DIAGNOSTIC

title Congenital hip-joint dysplasias

investigator A.G.F. de Pagten, IJsselmuiden

duration 1976-1981

publication No publication available

abstract-----
Tracing and recording congenital hip-joint
dysplasias. An evaluation of the potential treatments.

=====FUNCTIONAL COMPLAINTS

title Headaches in the general practice
investigator D. Post, Wezep
duration 1971-1980
publication Post, D.
 The general practitioner and his
 headache patients, May 1980
 (thesis)

abstract_____

The implications of the complaint of headache for the individual and the household of which he or she is part.

=====FUNCTIONAL COMPLAINTS

title Diadynamic currents in treating
 herpes zoster
investigator J.W. van Ree, Nijmeegs Universitair
 Huisartsen Instituut, Nijmegen
duration 1973-1977
publication Ree, J.W. van
 Treating herpes zoster by means of
 diadynamic currents, Huisarts en
 Wetenschap 4 (1977) pp. 135 ff

abstract_____

Assessment of effect.

=====AGED PEOPLE

title Screening aged people for glaucoma
 simplex

investigator J.W.G.A. van Rens, Nijmeegs Univer-
 sitair Huisartsen Instituut, Nijme-
 gen

duration 1973-1976

publication Rens, J.W.G.A. van
 Screening aged people for glaucoma
 simplex, 1977 (thesis)

abstract-----
A comparative investigation among the aged conducted
by general practitioner and district nurses.

=====FUNCTIONAL COMPLAINTS

title An inquiry concerning herpes zoster
 patients

investigator P. Siphema, Damwoude

duration 1974-1976

publication Ceased without publication

abstract-----
Information is sought as to the question why a person
gets herpes zoster at a particular spot at a
particular moment.

===== MORBIDITY REGISTRATION

title Emergencies in a general practice
investigator P.Th. Smit, Emmeloord
duration 1971-1977
publication Smit, P.Th.
 Emergencies in a general practice,
 1974 (thesis)

abstract_____

An inventory of experience:
- morbidity and treatment rates of emergencies
- differential diagnosing and therapeutical problems.

===== FAMILY

title Child, GP, Family: family therapy
 in primary health care
investigator A. Smits, Nijmeegs Universitair
 Huisartsen Instituut, Nijmegen
duration 1972-1978
publication Smits, A., F.J.A. Huygen
 Family therapy in primary health
 care; an attempt at evaluation,
 Huisarts en Wetenschap 10 (1976)
 pp. 373 ff;
 Id. Intermediair 43 (1977) p. 73;
 Smits, A.J.A.
 Child, GP and family, an exploratory
 investigation of the connections
 between parent characteristics and
 their presenting the general prac-
 titioner with disturbed health of

their child(ren), 1978 (thesis)

abstract

An evaluation of psychotherapy in close co-operation with general practitioners.

=====DECISION THEORY

title The decision model used by the
 general practitioner in the case of
 coxal arthrosis

investigator C. Spreeuwenberg, J.C. van Es, Uni-
 versitair Huisartsen Instituut,
 Utrecht

duration 1978-1980

publication No publication available

abstract

An attempt at devising a decision model for the use of the general practitioner in respect of his conduct of cases of coxal arthrosis.

=====TERMINAL CARE

title Terminal care by the general practitioner

investigator C. Spreeuwenberg, J.C. van Es, Universitair Huisartsen Instituut, Utrecht

duration 1979-1980

publication Spreeuwenberg, C.
General practitioner and terminal care, March 1981 (thesis);
The general practitioner and terminal care, Allgemeinmedizin International 10 (1981) 1, pp. 11-14 (in English)

abstract-----

In how far is the terminal care given by the general practitioner matched to the needs of the patient?

=====DIET

title Determination of the effect of high-linoleic acid and low-linoleic acid, 1300 cal, diets on weight reduction, fat metabolism and glucose metabolism

investigator R. Vergroessen, Philips Medische Dienst, Eindhoven

duration 1973-1974

publication No report available

abstract-----

The relative convenience of weight reduction with the help of diets A and B. Any favourable effects of diets A and B on blood chemistry. Once every four weeks two groups of overweight persons are checked for weight losses and blood chemistry.

=====TESTING

title The application of cervix cytology
 in the general practice as a test
 case for anticipatory medicine

investigator C. van Weel, Gezondheidscentrum
 Ommoord, Rotterdam

duration 1974-1977

publication Weel, C. van
 The application of cervix cytology
 in the general practice, as a test
 case for anticipatory medicine,
 Huisarts en Wetenschap (1975)
 pp. 402 ff

abstract-----
Making use of applications of cervix cytology a study
is made of the extent to which anticipation on
chronic diseases and deviations is possible on the
basis of the daily activities of the general prac-
titioner.

=====PSYCHO-SOCIAL PROBLEMS

title Depression in the general practice

investigator C.H.A. Westhoff, Nederlands Huis-
 artsen Genootschap, Utrecht

duration 1973-1979

publication Westhof, C.H.A.
 Depression in the general practice,
 1979 (thesis)

abstract-----
A study of the manner in which the diagnosis comes to
be established and of the usefulness of an instrument
(questionnaire and brief self-rating in writing) in
this. What therapies are adopted, which are the most
effective?

=====SCREENING

title Mass screening for colon and rectum
 carcinoma making use of the
 'hemoccult test'

investigator A.N. de Wolf, Rijksuniversiteit
 Leiden, Vakgroep Huisartsgenees-
 kunde, Leiden

duration 1978-1981

publication Wolf, A.N. de
 Mass screening for intestinal
 disease. Included in Annual Report
 of the Epidemiological Institute
 and the Sixth E.P.O.Z. Proceedings
 April 1980 (report)
 a thesis is being prepared (1983)

abstract-----
In what respects is the 'hemoccult' fit for mass
screening; to what extent can screening be done in the
general practice; can an insight be gained as to how
long the disease lasts by calculations on the basis of
prevalence (first year of screening) and incidence
(second year of screening)?

d. prescribing medicines

=====PATIENT GUIDANCE

title Demedicalization instruction to the public
investigator F.R. Bakker, Gezondheidscentrum Ommoord, Rotterdam
duration 1975-1977
publication Bakker, F.R.
The medical column, a good spot for demedicalization, Huisarts en Wetenschap 20 (1977) pp. 214-216

abstract-----
The medical column, a good spot for demedicalization.

=====CONSUMPTION OF MEDICIN

title Ways of taking medicines
investigator P.M. van Bockhoven, Philips Medische Dienst, Eindhoven
duration 1973-1976
publication Bockhoven, P.M. van
Medicine consumption in four general practices, Huisarts en Wetenschap (1975) pp. 111 ff

abstract-----
The registration of medicine consumption in the general practice and a study of the attitude and motivation shown by the patient in respect of medicine consumption.

=====CONSUMPTION OF MEDICIN

title Research on medicine consumption
investigator D.D. Breimer, F. Samuel Brusse, F.
 Bertens, Rijksuniversiteit Leiden,
 Vakgroep Huisartsgeneeskunde,
 Leiden
duration 1976-1980
publication An investigation of medicine con-
 sumption, 1980 (report)

abstract_____

- To acquire an understanding of the prescribing of medicines
- To determine and quantify the influencing factors
- The extramural consumption of medicines by health fund insured in the Nijmegen area.

=====REFERRALS

title Package programmes for clinical and
 operational auditing
investigator G. Dorrenboom, Gezondheidscentrum
 Feyenoord, Rotterdam
duration 1975-1977
publication No publication available;
 findings may be applied for

abstract_____

A comparison with English figures on communications, prescriptions referrals. The preparation for English purposes of a standard to be used in mutual comparisons.

=====PRESCRIBING

title Prescribing by general practitioners

investigator F.M. Haaijer-Ruskamp, H. Wesseling,
Rijksuniversiteit Groningen, Werk-
groep Sociale Farmacologie, Gro-
ningen

duration 1979 - on its way

publication Haaijer-Ruskamp, F.M.
The direct influence of the
specialist on the stock of
prescriptions used by the general
practitioner, Medisch Contact 33
(1978) pp. 1073 ff;
The general practitioner and halcion,
Nederlands Tijdschrift voor Genees-
kunde 125 (1981) 1, pp. 7 ff;
Some findings on the prescriptions
of general practitioners in the
Twente region, June 1981 (report)

~~abstract~~
To acquire an insight in the factors that influence
general practitioners in their prescribing of
medicines.

=====CONSUMPTION OF MEDICINE

title A pilot study of the action of
 benzodiazepine compounds with
 chronic use

investigator W.G.J. Iemhoff, P.J.V. Maas, G.
 Dorrenboom, a.o., Erasmus Universi-
 teit, Instituut voor Preventieve
 en Sociale Psychiatrie, Rotterdam

duration 1974-1976

publication Ceased without publication

abstract-----
The study aims at obtaining an insight in the action
of benzodiazepines and any ensuing dependency.

=====MEDICINE

title Research on sleeping pills

investigator J.Ph.L. Kopenberg, Universitair
 Huisartsen Instituut, Utrecht

duration 1971-1977

publication Kopenberg, J.Ph.L.
 Double-blind drug research with and
 without placebo, 1977 (thesis)

abstract-----
Double-blind clinical drug research. Every patient
is his own control, and as a consequence statistical
testing can be done by means of sequence analysis.

=====REFERRALS

title The general practitioner and his
prescribing behaviour

investigator H. Lamberts, N.L. Wolgast, Gezond-
heidscentrum Ommoord, Rotterdam

duration 1974-1977

publication Lamberts, H., N.L. Wolgast
The general practitioner and his
prescribing behaviour, a study of
the prescription of medicines,
Huisarts en Wetenschap 18 (1975)
pp. 321-333

abstract_____

A study of the prescription of medicines.

=====CONSUMPTION OF MEDICINE

title Monitoring the consumption of
medicines with the help of a
computer

investigator F.J. Lancee, Gezondheidscentrum
Ommoord, Rotterdam

duration 1971-1980

publication Lancee, F.J., H. Lamberts
Rational and practical pharmaco-
therapy for a group practice, Huis-
arts en Wetenschap 14 (1971)
pp. 65-69;
Idem, Pharmaceutisch Weekblad 106
(1971) pp. 109-112

abstract_____

No further information available.

=====REFERRALS

title Medicalization weighed and counted
investigator W.A. Meyboom, Huisartsengroep
 'Avereest', Dedemsvaart
duration 1980 - on its way
publication No publication available

abstract_____

Is the result of transferring the ECG estimates from the general practitioner to the cardiologist, an essential feature with the 'cardiophone', that more referrals from primary to secondary care are made without them being strictly necessary?

=====REFERRALS

title Prescriptions of vitamin
 preparations by general prac-
 titioners
investigator T.J.J.H. Theunissen, Landbouw Hoge-
 school, afdeling Voedingen, Wa-
 geningen
duration 1976-1979
publication No publication available

abstract_____

No further information available.

=====PRESCRIBING

title Continuous monitoring of the
 prescribing behaviour

investigator N. Wolgast, Gezondheidscentrum
 Ommoord, Rotterdam

duration 1977-1980

publication Ceased without publication

abstract_____

A component study of the Monitoring Project.

Important =====

All titles of publications have been given in English. This does not mean that the publications themselves have been written as such. On the contrary, nearly all of them are in Dutch. Sometimes an english summary has been given.
